About the Author 323

Index 325

From Engineer to Manager: Mastering the Transition is a lively, down-to-earth experience in the journey to innovative engineering management. The author's 20+ year perspective indicates that, while most engineers will spend the majority of their careers as managers, most are dissatisfied with the transition. Much of this frustration is the result of a lack of preparation and training. This book gives engineers a solid grounding in the critical attitudes and principles needed for success.

The book teaches how to internalize the attitudes and master the associated skills needed to ensure a smooth transition to management. It explains how to communicate more effectively, improve relationships with colleagues, and realize an improved use of time. Professionals learn how to use their newly acquired skills to solve immediate problems. Moreover, they are shown how to apply six fundamental principles to promote success in their ongoing work with engineering teams and management.

B. Michael Aucoin is the president of Electrical Expert, Inc. He received his D. Engineering in engineering management, and his M. Engineering in electrical engineering at Texas A&M University. His B.S. in engineering science was earned and conferred by the University of New Orleans.
