

# 2002 DOD MAINTENANCE SYMPOSIUM

*Panel Discussion: Aging Systems*

*Classic to Geriatric to Jurassic - When Will it Stop?*

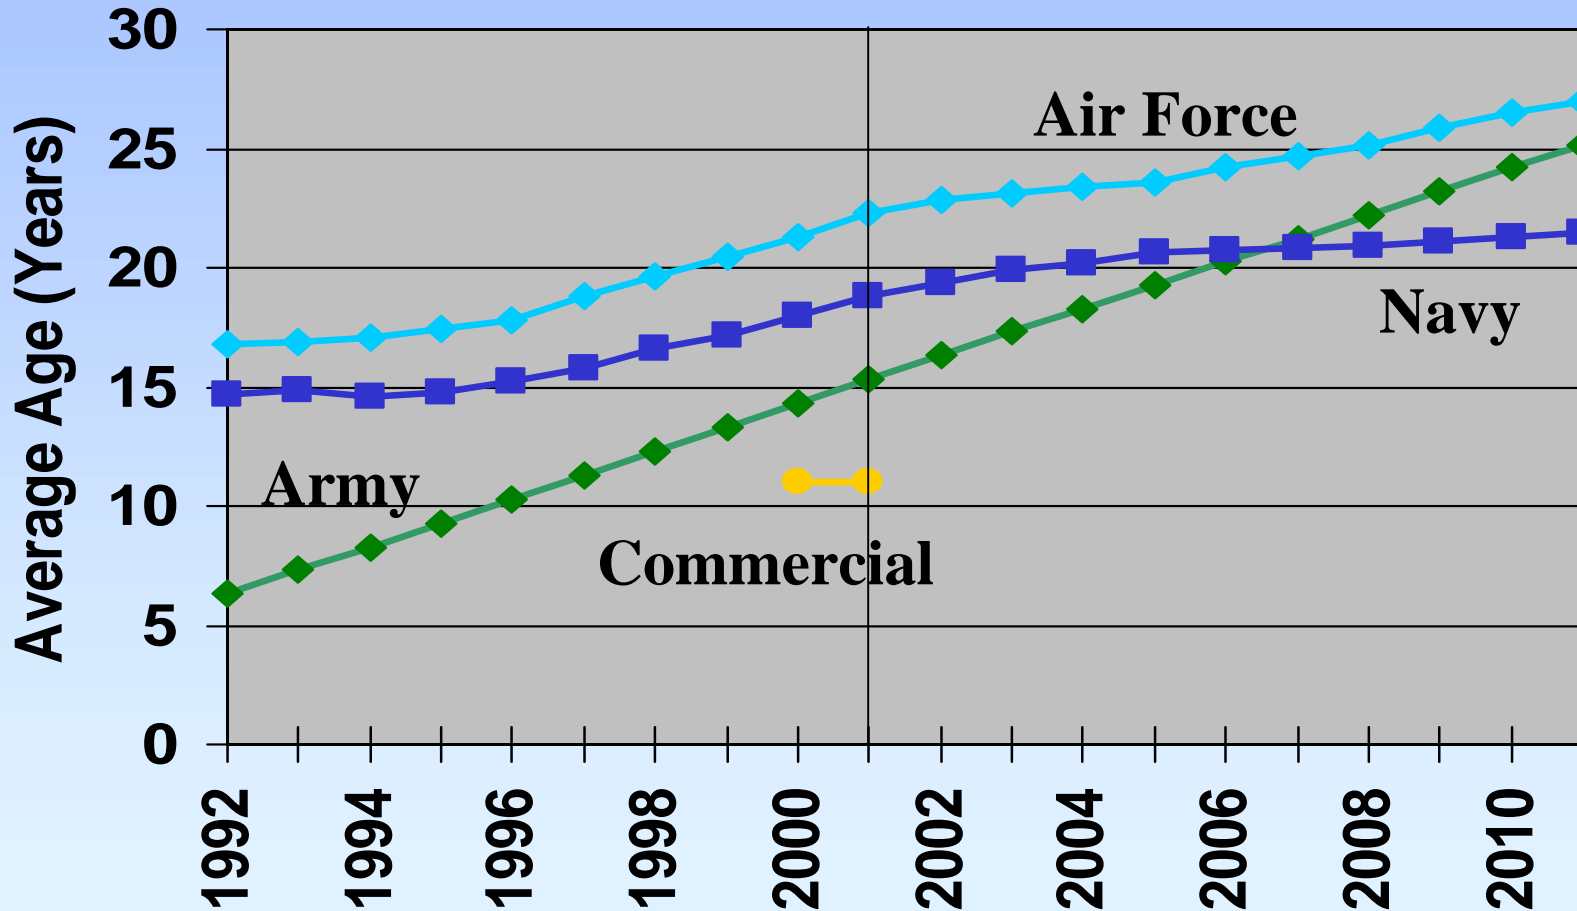

Mr. Robert P. Ernst

Head, Aging Aircraft Program

30 Oct 2002

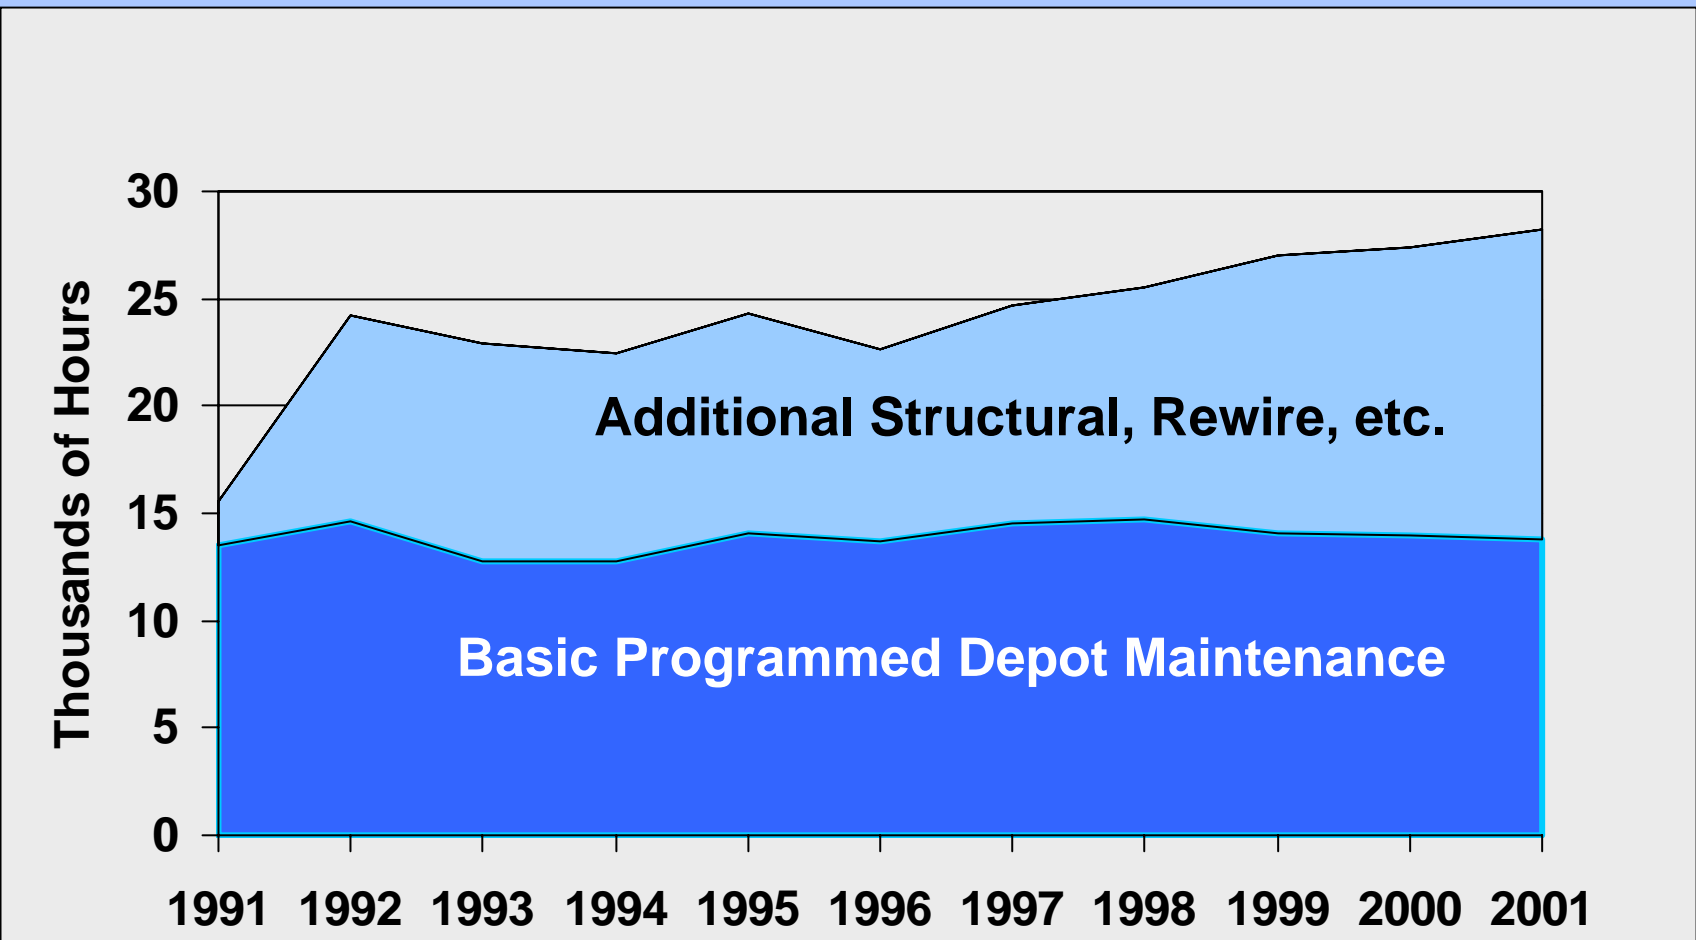

# Aircraft Age Trend

## Fleet-Wide Average

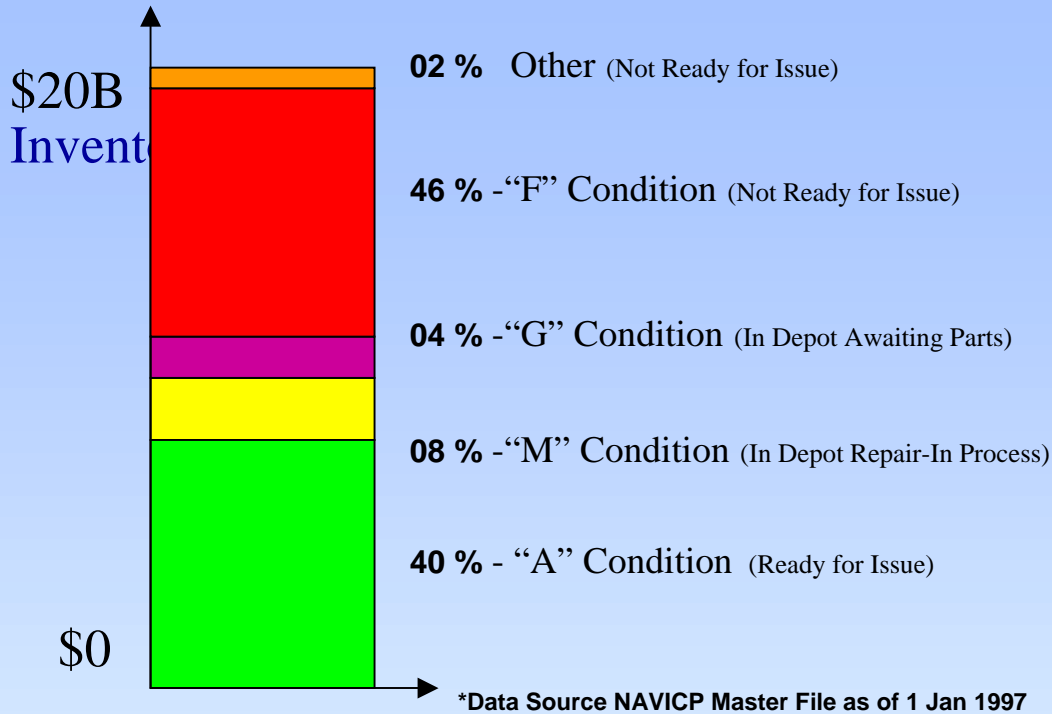

**Differences In Business Operating Rules Readily Apparent**

*Effect: Increased Depot maintenance  
Difficulty forecasting parts*

# Parts/Component Management

→ Component Pipeline

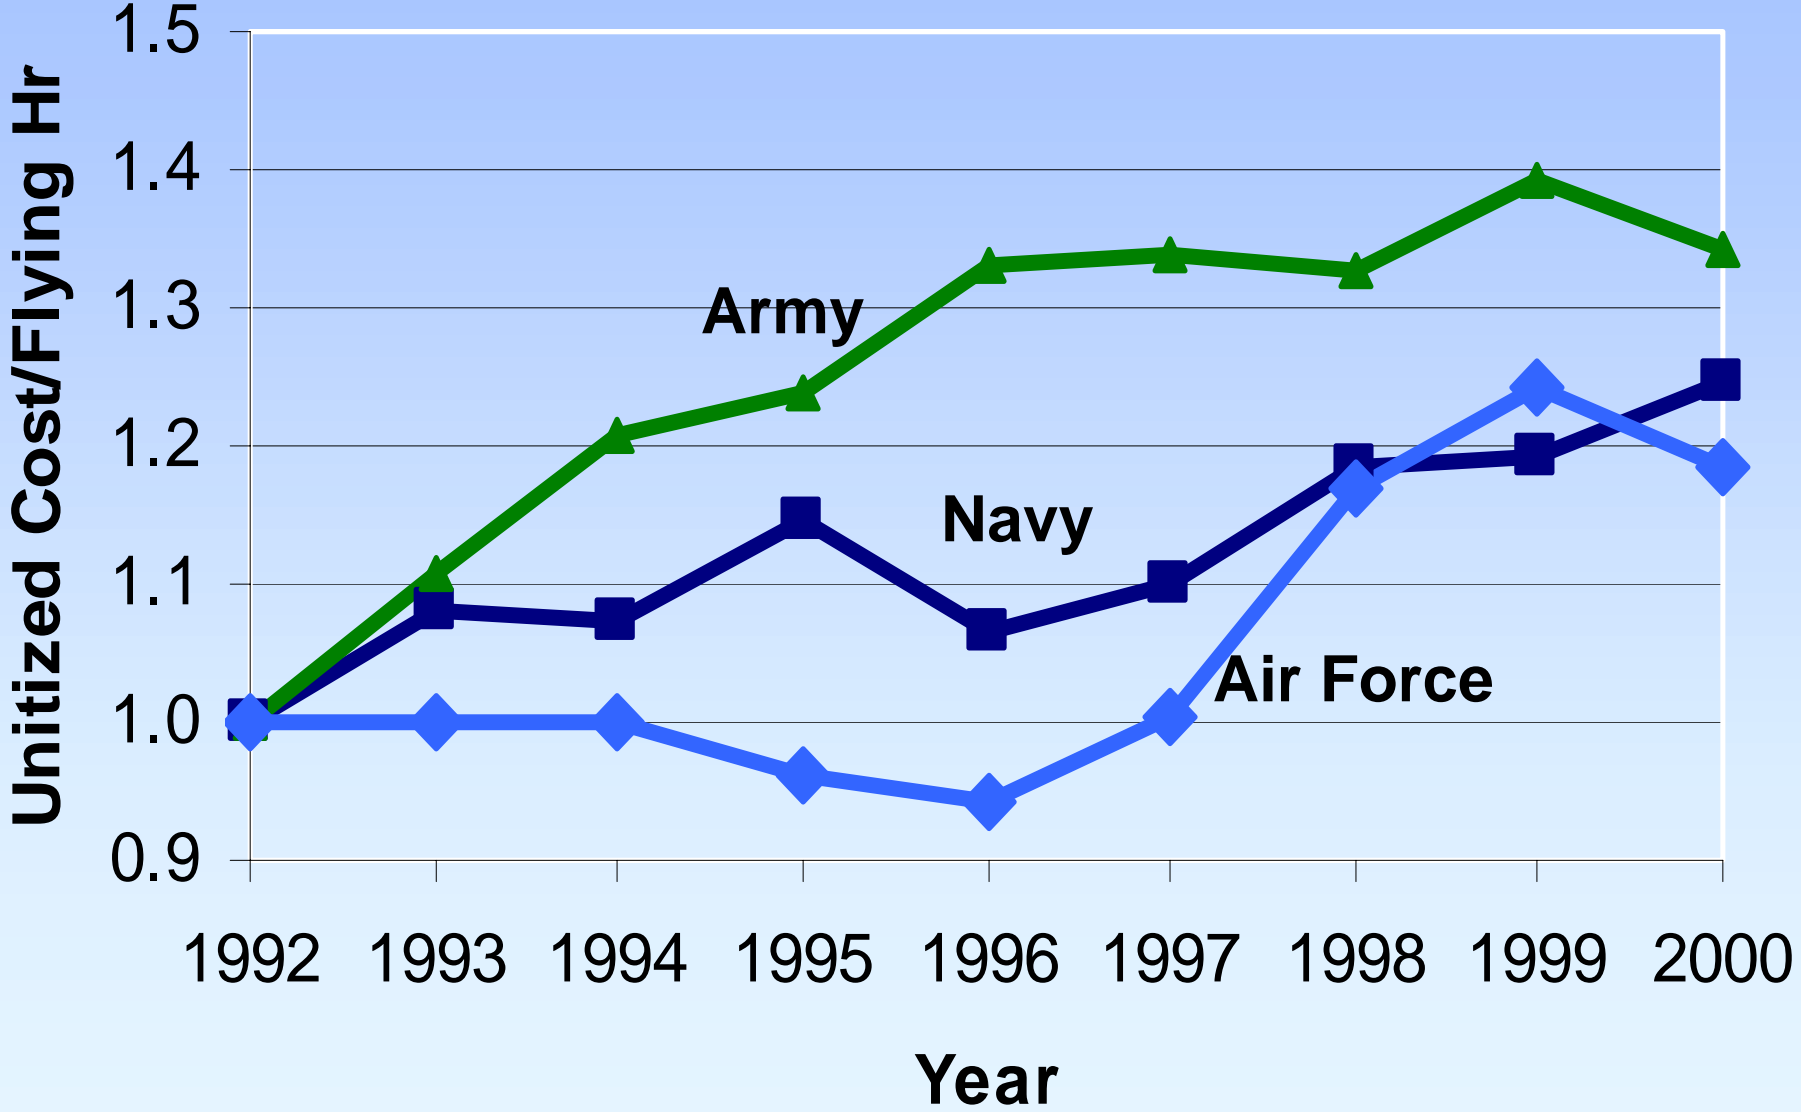

Converting Inventory to Readiness ...  
 Requires a "Business" Approach

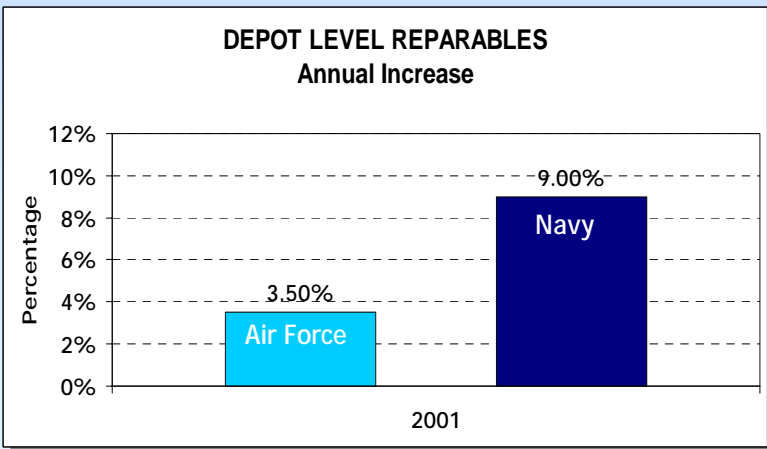

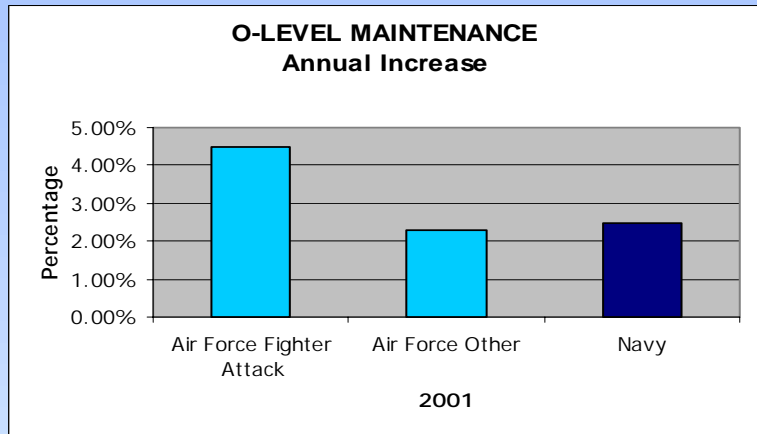

# Unitized Cost/Flight Hour

Fleet-Wide Average

# Cost Trends And Operational Readiness

**Different Symptoms,  
Same Cause  
- Age -**

# Maintenance Training

## SWR TECHNOLOGY LOCATES FAULT DOWN THE PATH

Connects quickly to Aircraft with test lead in this example. Will be automated through AWA.

Provides easy operations and simple to understand response

Reflected measurement data will be ported to data base

# Tech Transition - Pubs/Training

**Control Surfaces**  
*(New honeycomb, PAA)*

**Wings/Exterior**  
*(Thick Film)*

**Deep Zonal**  
*(Aerosol)*

**Inaccessible**  
*(Sensors)*

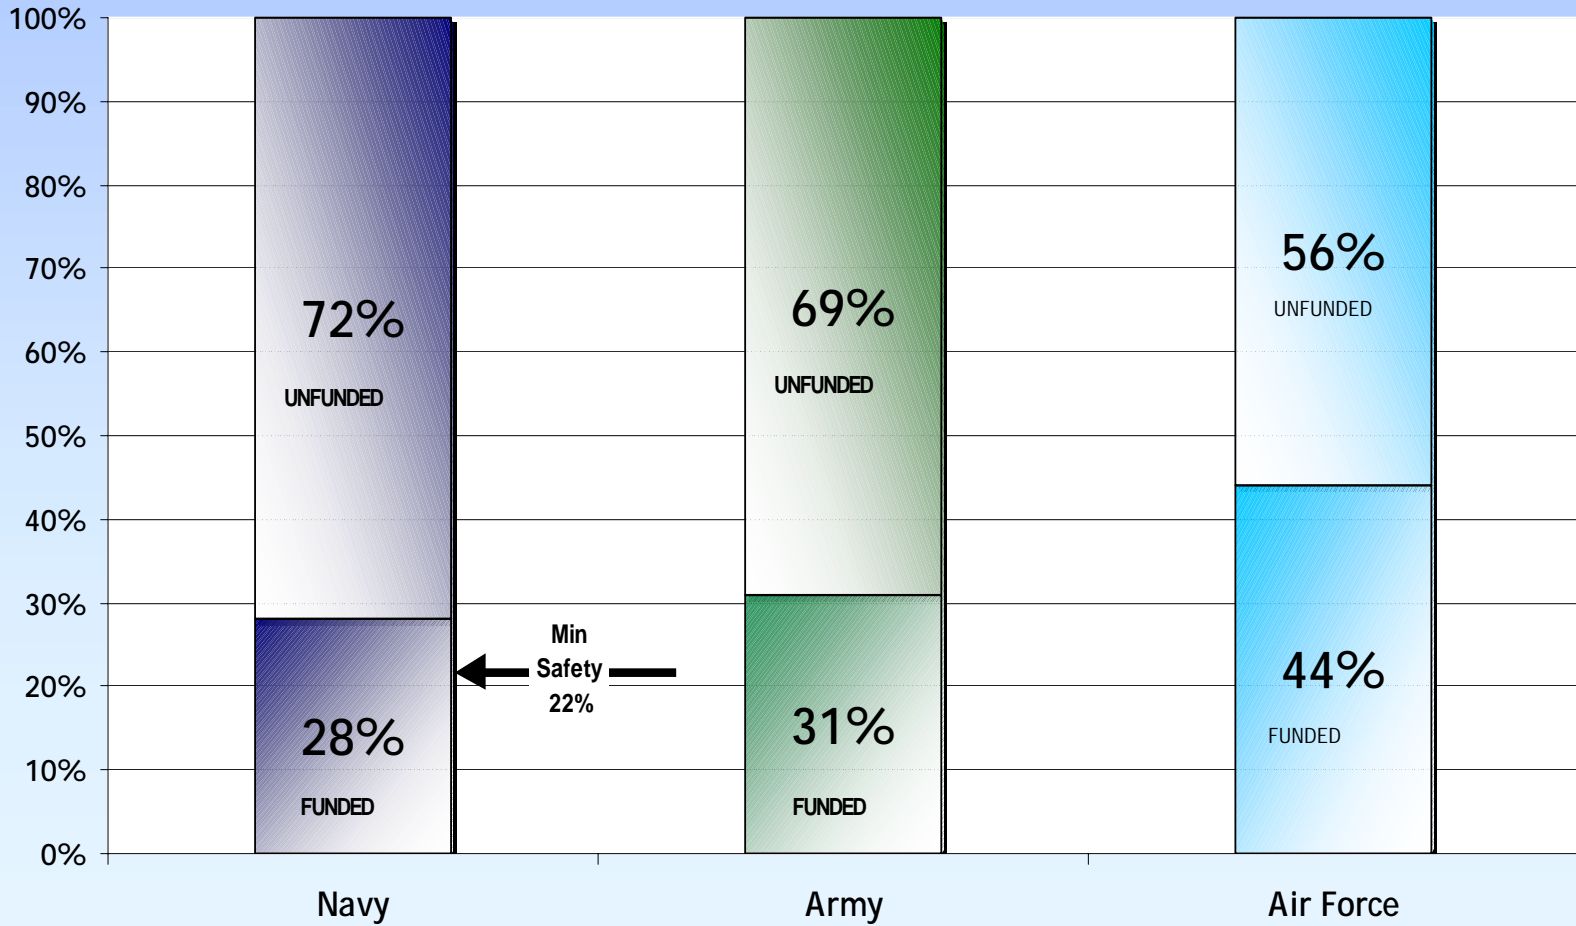

- 1. Map compound/material to application**
- 2. Coordinate procurement**
- 3. Supply**
- 4. Pubs (-509 changes)**
- 5. Training**

# *What Changes Can we Make?*

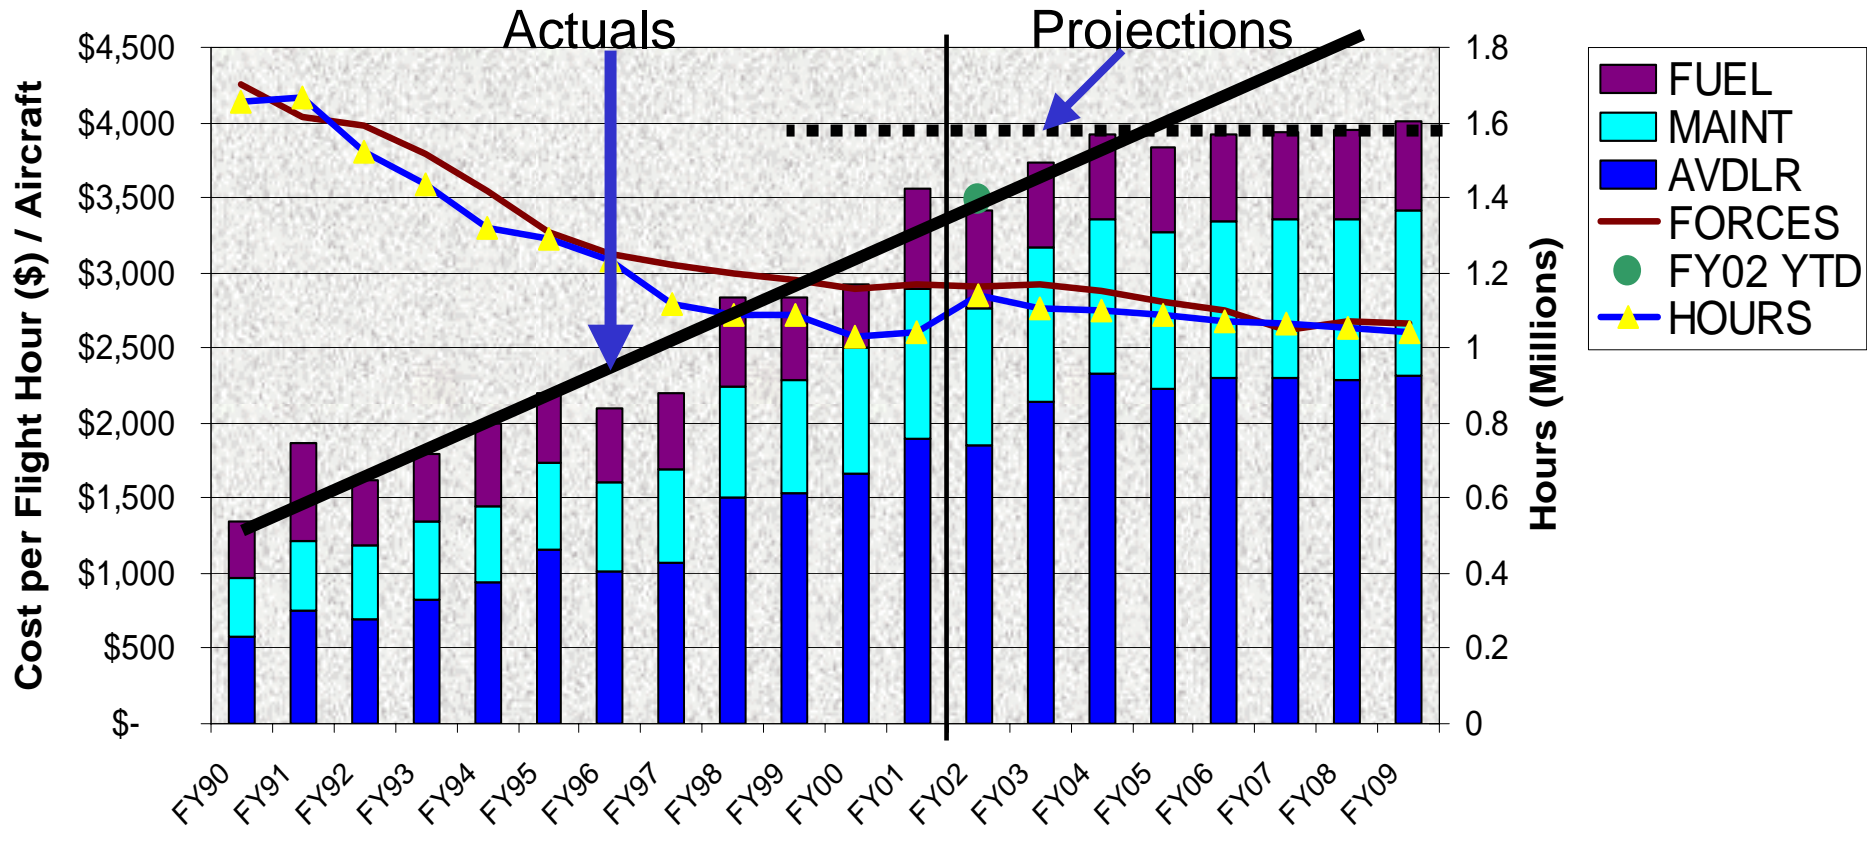

# *Change: Preserve Limited "Sustaining Engineering" and use Common Solutions*

## FY01 Sustaining Engineering — Required vs. Funded

# Flying Hour Program Costs

## "Real Budgeting"

Future budget =/ Projected growth  
 Answer = "steal" from current FY budgets

# *Eliminate Funding Stovepipes & Fragmented Program Management*

*Change:*

# *Integrated prognostics strategy*

- 1. Start with top maintenance drivers not new technology**
- 2. Develop Common Failure “standards”**
- 3. Integrate ALL Systems**

# *Open Systems*

## *Deciphering the Tower of Babel*

- Move from open systems (for a vendor) to “plug –n-play”
- Which interfaces should be the standard?
- **Will the “real” standard please stand up?**

JCAA/AVSI Interface Standards

# Airframe (What is the best of breed?)

Corrosion Protection - Recommended	Penetration As measured by Capillary Migration in 16"	Aged Film Characteristics (7 da. + @ 160F)	VOC	SALT SPRAY Days to Failure Steel	SALT SPRAY Days to Failure Aluminum
<b>FILMS (foggable?)</b>					
Corrosion X Aviation)	9	Viscous Fluid	52g/l	<12, <12, 17, 18	35 & 35

	10	Hard Tacky film	489g/l	3, 5	15, 22, 33, & 4
	10	Hard, non-tacky	?	2, 2	7, 7, 8, & 13
	10	Hard Brittle Film	573g/l	<1	26 & 26
	8	Hard Pliable Film	<100g/l	1	13 & 29
	14	Tacky Firm Film	?	<1	7 & 7
	8	Tacky Firm Film	?	<1	<1
	11.5	Hard Peelable Film	?	<1	<1
	9	Oily Fluid	298g/l	1	4 & 4
	10	Oily Fluid	312g/l	2	3 & 3

Replace current CRII-coated aluminum honeycomb cores in control surfaces

Recommended due to opacity  
Not recommended due to brittle film

# JOINT COUNCIL 'n AGING AIRCRAFT

# Data Toolsets

## APG-65 Example

The screenshot displays the software interface for calculating costs. It includes input fields for CDA, Component, and various options. Below the input fields are several data tables for Option A, Option B, and Option C, showing costs for different components and labor over time.

	Total	2003	2004	2005	2006	2007	2008	2009
Total	\$130.70			\$45.70	\$45.70	\$45.70	\$45.70	\$45.70
Component	\$713.00			\$41.07	\$41.07	\$41.07	\$41.07	\$41.07
HFE								
Unit Testing	\$1							
Assembly Test								
Labor	\$110.40			\$1.00	\$1.00	\$1.00	\$1.00	\$1.00

	Total	2003	2004	2005	2006	2007	2008	2009
Total	\$290.07		\$102.50	\$25	\$1.41	\$1.41	\$1.41	\$1.41
Component	\$171.55			\$4.0	\$4.0	\$4.0	\$4.0	\$4.0
HFE	\$147.00		\$197.00					
Unit Testing	\$75.8		\$75.8					
Assembly Test	\$25		\$25					
Labor	\$110.40			\$1.00	\$1.00	\$1.00	\$1.00	\$1.00

	Total	2003	2004	2005	2006	2007	2008	2009
Total	\$150.00		\$102.50	\$25	\$1.41	\$1.41	\$1.41	\$1.41
Component	\$22.00			\$4.0	\$4.0	\$4.0	\$4.0	\$4.0
HFE	\$147.00		\$197.00					
Unit Testing	\$75.8		\$75.8

Labor	\$110.40			\$1.00	\$1.00	\$1.00	\$1.00	\$1.00

# Subsystem Reliability Trends Over Time

*Continued Degradation Despite Corrective Actions*

Inertial Measurement Unit

Reliability Degradation Impacts Compounded by:

- Diminishing Manufacturing Sources
- Obsolescence
- Configuration Diversity

Navigation Data Converter-Repeater

How does this impact our logistics elements?

Data from S-3 Subsystems

# *Theoretical Aging Models*

$$\text{Performance} = f(\text{Age})$$

# Risk Based Logistics

## Severity

		Severity			
		Catastrophic	Critical	Marginal	Negligible
F r e q u e n c y	Frequent (A)	1	3	7	13
	Probable (B)	2	5	9	16
	Occasional (C)	4	6	11	18
	Remote (D)	8	10	14	19
	Improbable (E)	12	15	17	20

**Unacceptable**

1-5 High safety risk  
AIR 00

**Acceptable With review**

11-17 Low safety risk  
PMA Acceptance

**Undesirable**

6-10 Medium safety risk  
AIR 4.0

**Acceptable Without review**

18-20 Very low safety risk  
IPT / FST / SSWG Acceptance

# Faulty Wiring

## Cost Impact

- 15-20% of “No-Fault” Found (A799) due to wiring failures
- Industry Survey Estimates 50% reduction of costs through use of Automatic Test Systems

- ISSUES:**
- Prognostic thresholds (red/yellow/green)
  - Data transfer (AWA-NALCOMIS)
  - New technology Insertion

# Commonality

## Replacement Attitude Heading Reference System (RAHRS)

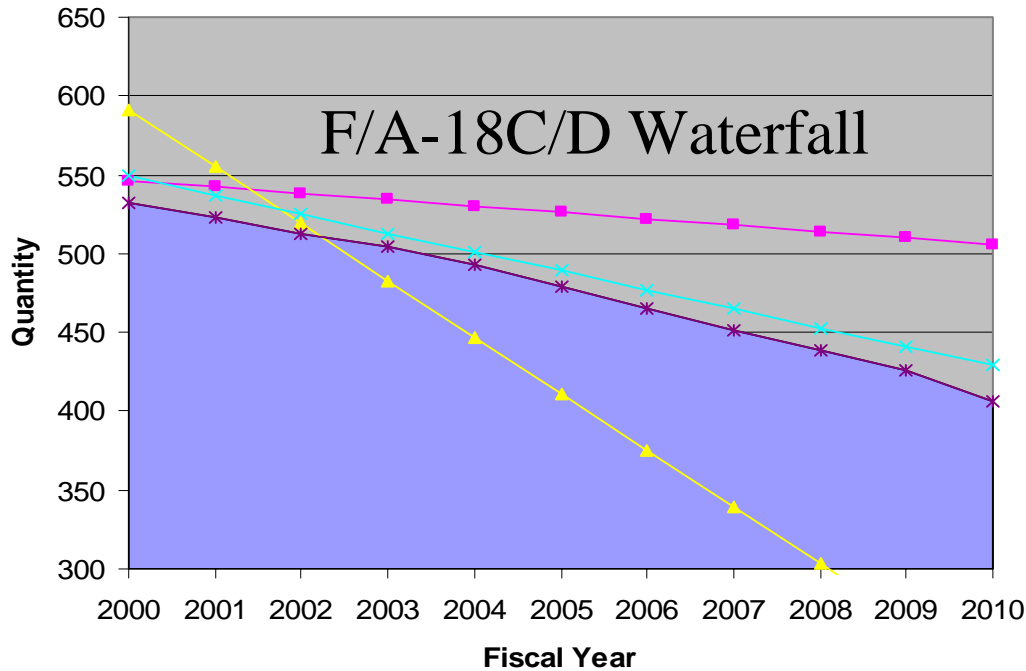

- Replaces AN/ASN-50 and A24G (AMSR top 100 item) AHRS with highly reliable NDI Functional unit
  - *Increase reliability to >7500hrs vs. current <200hrs - 500hrs*
- LECP criteria satisfied on **4 of 5 programs**

Existing installation      New installation

# Process Problems!

We're making decisions  
Without going thru the  
**COMPLETE PROCESS**

*Couple*  
Parts Evaluation  
*with*  
Design Evaluation

- *Let's incorporate reliable solutions*
- *Appropriate use of parts with design applications*
