

BREAK OUT SESSIONS

The goal of the four breakout sessions is to collectively discuss issues critical to the success of OBD by brainstorming the current state and problems of each selected topic area. This is followed by a discussion of possible industry solutions and future directions.

Format: A pre-selected moderator will set the tone and direction by giving a brief introduction to the topic then open the topic up to the group for discussion. A scribe will simultaneously record the key points gathered during the conversations. Each moderator will share the information gathered in the session with the entire group.

August 26, 2010

Hybrid Break-Out Session

This session will discuss possible approaches to OBD for different hybrid architectures and emissions certifications standards. Participants will be invited to share their interpretation of the existing regulatory language surrounding hybrid OBD and possible upcoming changes in the next light duty regulation.

Moderator: *Andrew Zettle, General Motor Corp.*

Communications Break-Out Session

As OBD communication requirements increase in complexity, many questions arise in regard to interpreting the multitude of SAE and ISO communication standards used in these vehicles. This breakout session is intended to discuss and review these new requirements in order to share the issues, challenges, and lessons learned.

Moderator: *Paul Baltusis, Ford Motor Co.*
