Automotive Technology Roadmap

TABLE OF CONTENTS

INTRODUCTION	11
Ricardo Perspective	11
Executive summary	13
Key drivers to technology development	13
Legislation and regulation	13
Greenhouse gas/ CO ₂ emissions	13
Passenger and pedestrian safety	17
Exhaust emissions	20
Recycling	22
Competing for customers	23
Improving fuel economy	24
Performance and vehicle dynamics	25
Safety and security	25
Vehicle design and style	26
Cost control and increasing shareholder wealth	26
Vehicle design and testing	26
Economies of scale and platforms	27
OEMs and the tier structure	28
Modules and sub-assemblies	28
Technology trends affecting the industry	29
Shortening design and replacement cycles	29
Systems integration	29
The packaging dilemma	30
Electrics, electronics and mechatronics	31
Availability of diagnostic information	31
BODY AND SYSTEMS	33
The body structure	33
Summary and timeline	33
Aerodynamics	34
Body concepts	36
Modules	37
Corner modules	37
Materials	38
Lightweight construction	39
Aluminium, magnesium and hybrid construction	39
Plastics	41
Hybrid materials technology	42
SMC	43
Nanocomposites	44
Recycling	45
Joining technology	47
Adhesives	47
Welding	49
Self-piercing rivets	53
Paints and coatings	55
Rust-proofing	55
Paint layers	55
Types of paint	57
ADVANCED LIGHTING TECHNOLOGY	59
Summary timeline	59
Front lights	59
Intelligent lighting systems	64
Rear lights	65
Interior lighting	67
Instrument panel and switch lighting	67
Ambient lighting	67
Colour	68
Display technology	68

Head-up display	70
Intelligent interior lighting	71
Vehicle fitment to 2018 and future trends	71
Design presentation	72
Validating the headlamp and lighting design	72
Market Penetration	72
SAFETY	74
Summary timeline	74
Passive Safety systems	75
Airbags	75
Seat belts	77
Rear seat belts	78
Active head restraints	79
Occupant detection systems	79
Structural developments	81
Compatibility	82
Seat safety design	83
Pedestrian protection	83
Active safety systems	87
Vehicle control and rollover	87
Electronic Stability Control (ESC)	87
ASR (Anti-Schlupf-Regelung - Traction Control)	89
Electronic Braking System (EBS) or Electronic Brake Distribution (EBD)	89
Active Suspension	90
Active All Wheel Drive (AWD)	91
Collision Mitigation Systems (CMS)	91
Collision Mitigation and Avoidance Systems (CMAS)	92
Lane Departure Warning (LDW) systems	92
Lane Keeping Assistance	92
Adaptive Cruise Control (ACC)	92
Accelerator Force Feedback Pedal (AFFP)	94
Torque vectoring	95
Sensor technology	95
The sensitive car	96
Human-machine interface (HMI)	97
Drowsiness Detection Systems	100
Alcohol interlock	100
Reversing Assist/Parking Assist	101
Blind spot monitor	102
Vision Enhancement	102
Passive night vision systems	102
Active night vision systems	102
Advanced vision systems	103
Voice activation	104
Vehicle fitment to 2018 and future trends	104
Consumer demand	104
OEM demand	105
Concerns over litigation	105
Concerns over added value	105
Market Penetration	105
INTERIOR SYSTEMS	108
Climate control systems (HVAC)	108
R744 CO ₂ refrigerant gas	108
Modules and packaging	110
Infotainment – the Internet in the car	110
Platforms and gateways	111
AUTOSAR	114
Telematics	117
Online services	117
Bandwidths	117
Aerials	118

Vehicle fitment to 2018 and future trends	119
ELECTRONICS	120
Microprocessors	120
Demands of the automotive industry	121
Temperature requirements	122
Vibration and shock	123
Failure rates	124
Challenges for the industry	124
Bandwidth	125
Standardisation	125
Changes in the automotive industry	126
Centralised architecture or decentralised architecture?	126
Automotive bus systems	128
Decentralisation	128
Under-the-hood and body control buses	130
Controller Area Network (CAN)	130
Local Interconnect Network	131
Entertainment and driver information systems	131
Media Oriented System Transport (MOST)	131
Intelligent Transport System Data Bus (IDB)	132
Digital Data Bus (D2B)	133
Bluetooth	133
ZigBee	133
Car2Car	133
Dedicated Short Range Communications (DSRC)	134
Advanced safety systems	135
ByteFlight	135
FlexRay	135
Time-Triggered Protocol (TTP)	136
Time-Triggered CAN (TTCAN)	136
Other bus systems	137
Bus coexistence	138
Technology development	138
Fibre optics	138
Flat cables	139
Flexible printed circuits	139
Programmable logic devices	140
Software	141
AUTOSAR	141
Software potential	144
Standards bodies	144
Distributed functions	145
Security	145
Vehicle fitment to 2018 and future trends	147
Appendix 1: OSI Protocol Description	148
Appendix 2: Encoding Dictionary	149
CHASSIS SYSTEMS	152
Summary timeline	152
Steering	153
Electrically Power Assisted Steering (EPAS)	153
Surface acoustic wave	154
Electro-Hydraulic Power Steering (EHPS)	155
Electric Power Steering (EPS)	155
Steer-by-wire	156
Active Front Steering (AFS)	156
Four-wheel steering	159
Automated parking	160
Suspension	161
Active body control	161
Anti-roll bars	162
Adaptive damping system	162

Air suspension	163
Active suspension	166
Electronic Damper Control (EDC)	166
Active Suspension Geometry (ASG)	166
Semi-active suspension	166
Active electronic suspension system	167
Vehicle fitment to 2018 and future trends	168
Brakes	168
Anti-Lock Braking System (ABS)	168
Electronic Braking System (EBS) or Electronic Brake Distribution (EBD)	168
Brake Assist (BA)	168
Autonomous emergency braking	171
Ceramic composite brakes	171
Brake-by-wire	171
Electro-hydraulic brake-by-wire	171
Electro-mechanical brake-by-wire	173
Regenerative braking systems and brake blending	174
Vehicle stability systems	175
Wheels and tires	176
Tire Pressure Monitoring System (TPMS)	176
Vehicle fitment to 2018 and future trends	177
Four-wheel drive (4WD)	177
Emissions and Fuel Economy	178
Active Torque Dynamics (ATD)	178
Safety and AWD	179
Technologies and Challenges	180
Electric AWD	181
Integration of Control Systems	181
Active All Wheel Drive (AWD)	181
Torque vectoring	182
The future for chassis design	182
Vehicle fitment to 2018 and future trends	183
POWERTRAIN	184
Industry Drivers	185
Summary and outlook	187
gasoline Engine Technology	192
Fuel efficiency	192
Engine technology development	193
Engine downsizing	194
The 2/4SIGHT engine	195
Torque enhancement system (VTES)	197
Variable compression ratios	198
Valve technology	198
Variable valve technology	198
Electro-mechanical valve control	201
Cylinder shutoff – Variable Displacement Engine (VDE) or Displacement on Demand	202
Combustion systems	204
Gasoline Direct Injection	204
Spray guided injection	206
Alternative engine technologies	207
The MUSIC engine	207
The Duke Engine	208
The Pivotal Engine	208
Homogeneous charge compression ignition (HCCI)	209
The Daimler DiesOtto concept	211
Diesel Engine Technology	212
Weight reduction and new materials	214
Commonrail	214
Bosch's third generation commonrail system	215
Commonrail for commercial vehicles	215
Piezo technology	217

Pistons	220
Compacted Graphite Iron (CGI)	220
Diesels in the US	222
The economic benefits of engine families	225
Summary and outlook	225
Turbocharging	226
Turbocharger Sectors	226
Superchargers	227
Turbocharging Versus Supercharging	227
Wastegated turbochargers	229
Turbocompounding	229
Charged Air Coolers (CACs)	230
Compressors	230
Compressor mapping	231
Twin-Scroll Turbochargers	232
Bearing Systems	232
Micro turbocharging	233
Variable geometry	233
Multiple Turbochargers	235
Electronic controls and new materials	238
Titanium Compressor Impellers	239
Assisted turbocharging	240
Exhaust aftertreatment	241
Gasoline (Petrol) Engine Emissions	242
Diesel Engine Emissions	243
Exhaust Gas Recirculation (EGR)	244
Selective Catalytic Reduction (SCR)	245
System design	248
Alternative fuels	248
Biofuels	248
Ethanol	251
Biodiesel	252
Biofuels' compatibility with today's engines	253
Liquefied Petroleum Gas (LPG) and Compressed Natural Gas (CNG)	254
Hydrogen enriched compressed natural gas (HCNG)	257
The hydrogen internal combustion engine	258
Hybrids	259
Powertrain	261
Batteries and power storage	262
OEM overview	263
Summary	267
Vehicle fitment to 2018 and future trends	267
Fuel cell vehicles	267
The different methods	274
Liquefied hydrogen	275
Compressed hydrogen	275
Methanol	275
Gasoline reformation	275
Metal hydrides	275
Nanotubes	276
Sodium borohydride	276
Cost factors	276
Fuel cell advantages	277
Future trends	277
ELECTRIC VEHICLE TECHNOLOGY	279
EV Componentry	280
Electrical motors	282
AC Motors	282
DC Motors	282
Synchronous motors	283
Switch reluctance machines	284

Battery Technology	285
Lead acid	286
Nickel-metal hydride (NiMH)	287
Sodium nickel chloride (NaNiCl)	288
Lithium-ion	289
Li-ion technology improvements	291
Supercapacitors and ultracapacitors	292
Flywheel Energy Storage	293
Energy Infrastructure	294
TRANSMISSIONS	296
Summary timeline	296
Consumer preferences - launch, gearshift quality and vehicle performance	299
Transmission costs, investment and installed capacity	299
Packaging, safety and weight	300
Transmissions technology	301
Manual Transmissions (MTs)	302
Automated manual transmissions (AMTs)	303
Dual clutch automated manual transmissions (DCT)	304
Market considerations	306
Automatic transmissions	307
6-speed automatic transmissions	308
7-speed transmissions	309
8-speed transmissions	310
Continuously variable transmissions (CVT)	311
Market considerations	314
Other transmission technologies	315
The infinitely variable transmission (IVT) or toroidal transmission	315
Antonov Automatic Driver (AAD)	316
Zeroshift	318
Hybrid transmissions	319
One-Mode and Two-Mode Hybrids	320
Clutch development	322
Clutch-by-wire	322
Summary	323
Vehicle fitment to 2018 and future trends	323

TABLE OF FIGURES

1: Change in CO ₂ emissions (all sources) for OECD countries, 2002 relative to 1990.....	13
2: Passenger car fuel economy/ CO ₂ reduction progress ACEA/ JAMA/ KAMA.....	14
3: The relationship between fuel consumption and CO ₂ targets.....	15
4: Top Runner fuel economy standards (Km/l).....	15
5: Relative cost versus fuel saving for different technology bases	16
6: The effect of safety technology measures in Germany to 2005	17
7: Combustion components in exhaust gases	20
8: The link between engine development and emissions regulation.....	20
9: European and US reductions in emissions.....	21
10: Progressive NO _x and HC emissions limits in Europe, Japan and the US	22
11: Varying consumer perceptions by car type	23
12: ACEA (European) car parc characteristics to 2002	24
13: The compromise between body acceleration and wheel loading	25
14: Engineering design parameters for various car segments.....	27
15: VW's PQ35 platform as used in the Golf.....	27
16: The growth of integrated functions	29
17: The relationship between functions and control units to 2014.....	30
18: Increasing electrical power requirements 1980-2005	31
19: HGV brake diagnostics	31
20: The automotive profit pool.....	32
21: Timeline for the body structure and related technology elements.....	33
22: A vehicle at design stage undergoing wind tunnel testing.	35
23: Delphi's quiet corner module	37
24: Faurecia's Audi A6 front-end module.	38
25: Laser welded door containing three different steels.	50
26: Friction stir welding.	53
27: Laser assisted friction stir welding.	53
28: Self-piercing rivet process.	54
29: Electrostatically applied 'nano-particle' clearcoat.....	56
30: Automotive lighting timeline.	59
31: Mercedes-Benz/Hella - active light system (1).....	60
32: Mercedes-Benz/Hella - active light system (2).....	61
33: Hella's swivelling light module.	62
34: Hella's LED headlamp assembly.	63
35: LED light cluster as used in the Lexus LS600h.....	64
36: Visteon's LED rear light cluster.....	65
37: Hella's variable intensity LED rear light cluster.	66
38: Light piping through plastic moulded pipes.....	68
39: Visteon's thin-film technology in Jaguar's XK instrument cluster.	70
40: GM's head-up display.	71
41: Vehicle safety systems timeline.	74
42: Autoliv's adaptive front airbags.	75
43: Autoliv's inflatable curtain.	76
44: Autoliv's inflatable tube airbag.	76
45: Delphi's passive occupant detection system.....	80
46: Autoliv's pedestrian protection system.....	86
47: Increasing vehicle dynamics system integration.....	89
48: Hella's advanced lane recognition system.	91
49: Continental's AFFP gives warning of hazardous situations by vibrating and exerting counter pressure in the pedal.....	94
50: Continental's rapid reaction accelerator pedal	95
51: External sensor ranges.....	97
52: Hella's active night vision system.	103
53: Estimated number of microprocessors in a vehicle.....	120

54: Requirements on electronic devices	122
55: Typical temperatures in which automotive electronic components must function	123
56: Temperature and shock operating conditions for automotive electronic components	124
57: Failure rate requirements of automotive electronic components.....	124
58: The development of processor clock frequencies.....	125
59: Domain related interconnected architecture	127
60: Use of CAN and LIN buses in a modern car	129
61: Trends in in-vehicle network architecture, 1995 – 2010.....	136
62: Telematics roadmap.....	147
63: X-by-wire roadmap	148
64: Chassis technology timeline.....	152
65: Components of an active system	157
66: Active steering system components	158
67: Variable ratio steering.....	159
68: Renault's active four wheel steer systems as fitted to the Laguna GT.....	159
69: Continental's air suspension system.....	165
70: Bose's fully electromechanical front suspension model	167
71: Continental's electro-hydraulic combi braking system layout.....	172
72: Continental's electronic wedge brake on test	173
73: Continental's regenerative braking system layout.....	174
74: TRW's second generation slip control boost brake technology.	175
75: Bosch's yaw torque compensation system.....	176
76: Attributes of lifestyle and AWD wagons and performance AWD vehicles	179
77: Attributes of SUVs and crossover vehicles.....	180
78: Urban road transport NOx emissions 1990 - 2015.....	186
79: Permitted emissions for cars by class.....	186
80: Specific emissions targets	188
81: Comparison of EU light vehicles against new proposed EU CO ₂ limits.....	188
82: Current car manufacturers' status against EU target	189
83: Technology roadmaps for gasoline engines focused on CO ₂ reduction	192
84: Cost/ benefit of future powertrain choices.....	194
85: 2/4SIGHT prototype engine	195
86: 2/4SIGHT engine concept.....	196
87: VCR engine efficiency at various power levels	198
88: Nissan's VVEL system.....	200
89: A cam-less engine using electro-mechanical valve control on test at Lotus.....	201
90: Valeo's e-valve system	201
91: A comparison of wall guided and spray guided direct injection.....	205
92: Cylinder head design layout for a four cylinder engine.....	207
93: A 3 litre equivalent Duke Engine	208
94: Water-cooled pivotal piston engine	208
95: The effect of diesel engine downsizing on fuel consumption.....	212
96: Continental's piezo injector.....	217
97: Delphi's HP HD Diesel Common rail System	218
98: A comparison of direct acting injectors versus servo-hydraulic injector spray patterns.....	219
99: US diesel and gasoline prices in comparison with the WTI crude index	222
100: Supercharged Audi 3.0L V6 Engine.....	228
101: Scania 12 litre Euro IV engine with EGR and turbocompounding	229
102: Compressor map of a turbocharger for passenger car applications	231
103: Holset VGT™ Turbocharging Technology.....	234
104: Tri-turbo concept from Mercedes Benz.....	236
105: BMW bi-turbo	237
106: Turbocharging technologies for high pressure charging.....	239
107: A comparison between 1975 and 2009 passenger car exhaust system	241
108: A Three-way catalytic converter	242
109: Heated TWC.....	243

110: NOx /particulates trade-off in cooled and non-cooled EGR systems.....	244
111: A schematic illustrating SCR.....	246
112: Diesel Particulate Filter.....	246
113: Diesel exhaust aftertreatment system schematic.....	247
114: World biofuel targets.....	249
115: First and second generation biofuels.....	249
116: Pros and cons of first and second generation biofuels.....	250
117: Well-to-wheel analysis for biofuels.....	250
118: OEM manufactured CNG/ LPG engine options are limited.....	253
119: CNG filling stations in Europe.....	255
120: Bi-fuel system components.....	256
121: A SunLine Tranist Agency "SunBus" with Cummins Westport 5.9-litre B Gas Plus engine, refuelling with HCNG.....	257
122: Toyota's Prius.....	262
123: Operation of the Toyota Prius under different driving circumstances.....	263
124: Comparison of fuel cell technologies.....	268
125: Mercedes-Benz B Class Fuel Cell research vehicle.....	269
126: Ballard's fuel cell stack.....	271
127: Ford fuel cell components.....	272
128: Ford's Focus fuel cell vehicle.....	277
129: Current projects and prototypes.....	279
130: Typical EV component layouts.....	280
131: A system layout with isolated high and low voltage circuits.....	281
132: A system layout with isolated high and low voltage circuits.....	281
133: EV motors.....	282
134: Switch reluctance machines.....	284
135: Energy storage overview.....	285
136: Battery technology evolution.....	287
137: A typical Zebra battery module.....	288
138: Lithium- ion battery pack.....	290
139: Energy density versus Output density in battery systems.....	290
140: A Ragone plot showing energy density vs power density for various energy-storage devices.....	292
141: NASA's G2 Flywheel.....	293
142: Transmission trends timeline.....	297
143: Advanced transmission potential contribution to overall CO ₂ reduction.....	298
144: Segment average kerb weight 1990 – 2006.....	300
145: Transmission types: strengths and weaknesses.....	301
146: Increasing penetration of 6 speed MTs – Europe.....	302
147: Manual transmission volumes – Europe.....	302
148: VW 7 speed dual clutch DCT -DQ200.....	304
149: Schematic of a DCT.....	304
150: LuK's dual dry clutch as used in the DQ200 VW 7-speed DCT.....	305
151: Getrag's DCT range to be launched 2007 – 2009.....	307
152: ZF's 7-speed high torque DCT.....	306
153: A Ravigneaux gear set.....	308
154: A simple epicyclic planetary gear set.....	307
155: ZF's 6HP 6-speed AT (front) compared with a previous 5-speed AT.....	308
156: Mercedes-Benz 7G-Tronic automatic transmission.....	309
157: ZF's 8HP 8-speed AT.....	310
158: Relative fuel savings for ATs.....	310
159: AT ratio trend.....	311
160: Audi's Multitronic CVT.....	311
161: Audi's second generation Multitronic CVT.....	312
162: Increasing torque capacity of the Audi Multitronic CVT.....	313
163: Jaico's current CVT fitment range.....	313
164: CVT production volumes.....	314

<i>165: Torotrak's infinitely variable transmission.....</i>	<i>315</i>
<i>166: A schematic of a toroidal transmission.</i>	<i>316</i>
<i>168: Zeroshift drive rings.....</i>	<i>318</i>
<i>169: One-Mode Hybrid Input-Split EVT.</i>	<i>319</i>
<i>170: Two-Mode Hybrid Input-Split EVT.</i>	<i>319</i>
<i>171: One-Mode Hybrid Input-Split EVT.</i>	<i>320</i>
<i>172: Two-Mode Hybrid with Input-Split and Compound-Split EVT Modes.....</i>	<i>320</i>
<i>173: Two mode hybrid transmission.</i>	<i>321</i>
