

A detailed close-up photograph of an engine's timing belt system. The image shows several black rubber pulleys of varying sizes, some with metal cores, and a black timing belt running across them. The engine block is made of light-colored metal, possibly aluminum, and features various bolts, nuts, and electrical connectors. The lighting is dramatic, highlighting the textures and metallic surfaces.

Lightweighting in Automotive Design and Manufacturing

CONTENTS

Introduction	6
Primary and Secondary Weight Reduction	10
Weight Saving Methods	11
Competition between OEMs.....	12
Barriers to weight reduction	14
The Drivers for Lightweighting	16
Consumer behaviour	18
Lightweighting as part of the solution	20
Government regulation	21
Greenhouse gas emissions or fuel efficiency.....	23
Vehicle safety	30
Historic Perspective	34
Cost Implications	38
Materials technology	42
Developing material technology.....	42
Advanced steel developments.....	43
Competition from other materials	47
The Future Steel Vehicle Program	49
Steel forming technology.....	53
Aluminium developments.....	56
Recycling	60
Aluminium and safety.....	63
Growth opportunities for aluminium	63
Changing aluminium properties using carbon nanotubes.....	66
Magnesium	67
Price volatility	67
Magnesium advantages.....	70
Magnesium extraction	74
Process development	75
Magnesium sheet production and stamping	77
Superplastic forming (SPF).....	78
Surface conditioning.....	78
Extrusion	79
Forging.....	80
Demand for magnesium	80
Titanium	82
Engines	83
Brake Systems.....	85
Exhaust Systems.....	85

Springs, bolts and fasteners	86
Lowering the cost of titanium	86
Extraction	87
Fabrication	87
Plastics	89
Hybrid materials technology	91
Sheet moulding compound (SMC).....	92
Nanocomposites.....	93
Honeycomb structures	94
Process development	95
Carbon Fibre	97
Textiles.....	98
Woven and knitted fabrics	98
Recycling.....	100
Joining technology.....	103
Adhesives.....	103
Welding.....	106
Self-piercing rivets	113
