Sectoral Report

**SupplierBusiness**

**Weight Reduction in Automotive  
Design and Manufacture**

2014 edition

[supplierbusiness.com](http://supplierbusiness.com)

# Contents

<b>Introduction</b> .....	<b>7</b>
<b>The effect of policy initiatives</b> .....	<b>9</b>
<b>Weight saving methods</b> .....	<b>14</b>
<b>Competition between OEMs</b> .....	<b>15</b>
<b>Mass reduction and vehicle lifecycle CO<sub>2</sub> emissions</b> .....	<b>17</b>
<b>Barriers to weight reduction</b> .....	<b>17</b>
Differentiation .....	17
Safety.....	18
Process development.....	18
Cost consideration .....	18
<b>The Drivers for Lightweighting</b> .....	<b>20</b>
<b>Government regulation</b> .....	<b>21</b>
<b>Fuel economy and CO<sub>2</sub> emissions</b> .....	<b>22</b>
The European Union .....	22
The United States.....	24
Japan.....	25
China .....	26
Other countries .....	26
Testing regimes .....	27
<b>Vehicle safety</b> .....	<b>28</b>
<b>Cost implications</b> .....	<b>31</b>
<b>Consumer behaviour</b> .....	<b>34</b>
Lightweighting as part of the solution .....	36
<b>Lifecycle analysis – the holistic approach</b> .....	<b>37</b>
<b>Historic Perspective</b> .....	<b>41</b>
<b>Weight Reduction by Sector</b> .....	<b>46</b>
<b>Body-in-white, closures and hang-ons</b> .....	<b>47</b>
<b>Powertrain</b> .....	<b>48</b>
<b>Chassis</b> .....	<b>49</b>
<b>Interiors</b> .....	<b>52</b>
<b>Materials technology</b> .....	<b>54</b>
<b>Developing material technology</b> .....	<b>54</b>
<b>Advanced steel developments</b> .....	<b>55</b>
Competition from other materials .....	62
The Future Steel Vehicle Programme.....	66
Steel forming technology.....	67
<b>Aluminium</b> .....	<b>70</b>
<b>Advanced aluminium alloys</b> .....	<b>75</b>
<b>Aluminium and safety</b> .....	<b>80</b>
<b>Growth opportunities for aluminium</b> .....	<b>84</b>
Powertrain applications .....	85
Chassis applications .....	86
Body applications.....	87

Changing aluminium properties using carbon nanotubes.....	88
<b>Recycling .....</b>	<b>89</b>
<b>Magnesium .....</b>	<b>90</b>
Price volatility .....	93
Demand for magnesium.....	95
Magnesium advantages .....	96
Magnesium extraction .....	99
Alloy and process development .....	99
Magnesium sheet production and stamping .....	102
Forging.....	104
<b>Titanium .....</b>	<b>105</b>
<b>Titanium engine applications.....</b>	<b>105</b>
<b>Titanium chassis applications .....</b>	<b>107</b>
Brake Systems .....	107
Exhaust Systems .....	107
<b>Lowering the cost of titanium .....</b>	<b>108</b>
Extraction .....	108
Fabrication .....	108
<b>Composite and Plastic Materials.....</b>	<b>110</b>
<b>Carbon fibre.....</b>	<b>110</b>
Strategic interest from OEMs.....	110
Supply-side constraints.....	111
<b>Carbon fibre cost reduction .....</b>	<b>114</b>
Process development.....	116
<b>Thermocomposite materials .....</b>	<b>121</b>
Thermoset versus thermoplastic .....	121
<b>Plastics.....</b>	<b>122</b>
<b>Sheet moulding compound (SMC) .....</b>	<b>124</b>
<b>Nano-scale materials .....</b>	<b>125</b>
<b>Honeycomb structures .....</b>	<b>128</b>
Process development.....	128
<b>Hybrid Materials Technology.....</b>	<b>131</b>
<b>Bio-Materials.....</b>	<b>134</b>
Challenges in bio-material application .....	135
<b>Bio-based materials .....</b>	<b>136</b>
<b>Current and future applications.....</b>	<b>136</b>
<b>Future application.....</b>	<b>137</b>
<b>Textiles .....</b>	<b>139</b>
<b>Woven and knitted fabrics.....</b>	<b>139</b>
<b>Recycling .....</b>	<b>141</b>
New ways of recycling.....	143
<b>Joining technology .....</b>	<b>144</b>
<b>Welding .....</b>	<b>144</b>
Laser welding.....	144
Magnetic pulse welding.....	145
Plasma arc welding.....	145
Deformation resistance welding.....	146
Ultrasonic aluminium welding .....	146
Friction stir welding.....	147
Laser-Assisted Friction Stir Welding .....	147
<b>Adhesive bonding .....</b>	<b>148</b>
Hybrid bonding .....	150
<b>Riveting .....</b>	<b>150</b>
Self-piercing rivets.....	150

# Figures

Figure 1: Potential further gains in vehicle efficiency .....	7
Figure 2: Segment average kerb weights 1990 - 2012 (Europe) .....	8
Figure 3: US light duty vehicle trends for weight, acceleration, fuel economy, and weight-adjusted fuel economy for model years 1975-2009 (US EPA, 2009 data) .....	9
Figure 4: Weight reduction in the current weight-based CO2 target system (left) and in a size based system (right) .....	10
Figure 5: Average CO2 emissions levels for new passenger cars in the EU .....	11
Figure 6: CO2 emissions for model year 2008 hybrids and their non-hybrid counterparts .....	12
Figure 7: The cost of fuel efficiency gains through weight reduction compared to other technologies .....	13
Figure 8: Fiat's C-Evo Platform .....	14
Figure 9: North American curb weight forecast .....	15
Figure 10: The use phase dominates lifecycle vehicle emissions .....	16
Figure 11: Analysing lifetime greenhouse gas effects .....	18
Figure 12: Relative CO2 reduction benefits vs. relative cost .....	19
Figure 13: Drivers and areas of focus for vehicle weight reduction .....	20
Figure 14: Methods for reducing CO2 output.....	21
Figure 15: Impact of vehicle weight on fuel consumption .....	22
Figure 16: The effect of alternative German proposals for CO2 reduction regulation for Europe .....	23
Figure 17: US targets for future GHG reductions (% reduction from 2005 levels).....	24
Figure 18: Average fuel efficiency 2010 and 2015 targets for gasoline vehicles.....	25
Figure 19: Comparison of different test regimes for EU, US and Japan.....	27
Figure 20: US mass of passenger cars 1975 – 2010 with weight attributed to safety, emissions, comfort and convenience features .....	29
Figure 21: Weight and cost comparison for automotive components .....	32
Figure 22: Challenges with materials application .....	32
Figure 23: US Regular Gasoline prices \$/gallon, January 2011 to June 2013.....	35
Figure 24: Evolution of average Al content of passenger cars in Europe.....	36
Figure 25: Progress in weight reduction through materials technology .....	37
Figure 26: Materials production average greenhouse gas emissions .....	38
Figure 27: Demand shortfall of aluminium from end-of-life recycling .....	38
Figure 28: Lifecycle system analysis schematic.....	40
Figure 29: CO2 equivalent output per kWh of electricity produced .....	40
Figure 30: Global automotive microelectromechanical systems (MEMS) sensors shipments .....	41
Figure 31: Mini segment average kerb weights 1990 - 2012 (Europe) .....	42
Figure 32: Upper mid segment average kerb weights 1990 – 2012 (Europe).....	42
Figure 33: Lower mid segment average kerb weights 1990 - 2012 (Europe) .....	43
Figure 34: Luxury segment average kerb weights 1990 - 2012 (Europe) .....	43
Figure 35: Trends in aluminium use.....	44
Figure 36: The multi-material vehicle concept applied to the Audi A8 body-in-white .....	45
Figure 37: Aluminium potential and market penetration in Europe.....	46
Figure 38: Weight share of modules and their weight increase.....	46
Figure 39: Changes in steel usage in BIW application.....	47
Figure 40: BIW materials 2006 data and 2015 forecast.....	48
Figure 41: Aluminium/ magnesium lightweight design 6 cylinder engine .....	49
Figure 42: Engine weight and performance for aluminium and cast iron blocks .....	49
Figure 43: Aston Martin carbon fibre rear spoiler .....	50
Figure 44: Areas for chassis weight reduction .....	51
Figure 45: Cost comparison of lightweight vehicle structures .....	52
Figure 46: Mass reduction in seat design.....	53
Figure 47: Contribution to weight reduction.....	54
Figure 48: Laser sintered manifold.....	55
Figure 49: Implementation of advanced steel alloys over time for Ford models.....	56

Figure 50: Overall demand for auto steel and other metals and materials .....	57
Figure 51: Advanced high strength steel developments.....	58
Figure 52: BIW materials by tensile strength BMW 6 Series .....	59
Figure 53: Third generation advanced high strength steel development.....	60
Figure 54: Microstructure of TRIP steel.....	61
Figure 55: Use of boron steel in BMW's 6 Series BIW .....	62
Figure 56: Beyond third generation AHSS; NanoSteel alloys.....	64
Figure 57: P-group elements in the periodic table .....	64
Figure 58: Elongation versus alloy percent p-group elements conventional high strength steels.....	65
Figure 59: Elongation versus alloy percent p-group elements NanoSteel AHSS.....	65
Figure 60: Life cycle greenhouse gas emissions of the Future Steel Vehicle (FSV) programme vehicles .....	67
Figure 61: Steel portfolio to technology portfolio flow diagram for the FSV programme .....	69
Figure 62: Aluminium content per vehicle .....	70
Figure 63: Primary aluminium production 2012 .....	71
Figure 64: US forecast market share of steel and aluminium .....	72
Figure 65: Al growth by segment for Europe and North America.....	72
Figure 66: Aluminium content in 2012 .....	73
Figure 67: Aluminium and plastic componentry BMW 7 Series body structure .....	74
Figure 68: Aluminium content growth 2009 to 2012 .....	75
Figure 69: Iso-strength curves for 6000 Series alloys.....	78
Figure 70: Composition of 7000 Series alloys .....	79
Figure 71: High aluminium content vehicles with a US NHTSA 5 star safety rating (2009) .....	81
Figure 72: Aluminium front structure .....	83
Figure 73: Weight reduction studies.....	84
Figure 74: Federal Mogul's Advanced Estoval II piston.....	85
Figure 75: Aluminium steering knuckle.....	87
Figure 76: Magnesium content per vehicle.....	90
Figure 77: Specific strength versus specific stiffness for various materials .....	91
Figure 78: Magnesium demand breakdown .....	92
Figure 79: Global magnesium production 1998 and 2011 by region.....	93
Figure 80: Die cast three cylinder engine block in AM-SC1 alloy .....	100
Figure 81: Potential magnesium applications .....	102
Figure 82: Potential magnesium extrusion use .....	103
Figure 83: Proportions of different materials – Audi R8 .....	105
Figure 84: Application of titanium-Metal Matrix Composite (MMC) alloys for engine components .....	106
Figure 85: Titanium use in the Bugatti Veyron .....	107
Figure 86: Price elasticity of demand for various engineering materials .....	109
Figure 87: CFRP cost structure according to SGL Group.....	115
Figure 88: Resin Transfer Moulding (RTM) process chain.....	115
Figure 89: McLaren's MP4-12C featuring a carbon fibre monocoque safety cell .....	116
Figure 90: Resin Transfer Moulding (RTM) process schematic.....	117
Figure 91: CFRP future development roadmap .....	117
Figure 92: Schematic of the Resin Spray Transfer process .....	118
Figure 93: Advanced engineering plastics use in the MX-0 design challenge vehicle .....	122
Figure 94: Density strength relationships for various engineering materials.....	123
Figure 95: Emerging automotive nanotechnology uses .....	126
Figure 96: Nanocomposite interior component.....	127
Figure 97: Over injection moulding of metal structures.....	131
Figure 98: A schematic illustrating a holistic interdisciplinary approach to multi-material design and manu- facture .....	131
Figure 99: Optimal continuous fibre reinforcement design for thermoplastic component .....	132
Figure 100: Hybrid materials process schematic .....	132

# Tables

<b>Table 1: The relative cost of fuel economy measures .....</b>	<b>8</b>
<b>Table 2: Global automotive efficiency and GHG standards.....</b>	<b>10</b>
<b>Table 3: Comparison of different fuel efficiency regulations and test regimes.....</b>	<b>28</b>
<b>Table 4: Relative crash safety of mass reduced SUV and car combinations.....</b>	<b>31</b>
<b>Table 5: Mass reduction potential for alternative materials.....</b>	<b>44</b>
<b>Table 6: OEM statements and commitments to weight reduction .....</b>	<b>45</b>
<b>Table 7: Multi-materials potential body applications .....</b>	<b>47</b>
<b>Table 8: Weight reduction in lightweight shock absorber assemblies .....</b>	<b>53</b>
<b>Table 9: Steel grades .....</b>	<b>63</b>
<b>Table 10: Range of steels available for FSV .....</b>	<b>68</b>
<b>Table 11: Summary applications of magnesium in Western Europe and North America .....</b>	<b>92</b>
<b>Table 12: Potential for weight saving replacing aluminium with magnesium in the powertrain .....</b>	<b>94</b>
<b>Table 13: Mechanical and physical properties of Magnesium .....</b>	<b>97</b>
<b>Table 14: properties of magnesium alloys compared with plastics, steel and aluminium .....</b>	<b>98</b>
<b>Table 15: Titanium cost comparison .....</b>	<b>105</b>
<b>Table 16: Global supply and demand for carbon fibre across all industries .....</b>	<b>112</b>
<b>Table 17: Small TOW and large TOW capacity by supplier 2011.....</b>	<b>113</b>
<b>Table 18: DoE US targets and metrics for carbon fibre and composites .....</b>	<b>119</b>
<b>Table 19: Advantages and disadvantages of thermoset and thermoplastic composites.....</b>	<b>121</b>
<b>Table 20: Mechanical properties of selected fibres and polymers .....</b>	<b>134</b>
<b>Table 21: Bio-based content of selected automotive components .....</b>	<b>136</b>
<b>Table 22: Selected bio-based automotive components .....</b>	<b>137</b>
