

INTRODUCTION TO INTERNAL COMBUSTION ENGINES

RICHARD STONE

4th Edition

Contents

Preface to the Fourth Edition	xii
Acknowledgements	xiv
Notation	xvi
1 Introduction	1
1.1 Fundamental operating principles	1
1.2 Early internal combustion engine development	5
1.3 Characteristics of internal combustion engines	7
1.4 Additional types of internal combustion engine	9
1.4.1 The Wankel engine	9
1.4.2 Direct injection spark ignition engines	9
1.5 Prospects for internal combustion engines	11
1.6 Fuel cells	12
1.7 Concluding remarks	14
1.8 Question	15
2 Thermodynamic principles	16
2.1 Introduction and definitions of efficiency	16
2.2 Ideal air standard cycles	18
2.2.1 The ideal air standard Otto cycle	18
2.2.2 The ideal air standard Diesel cycle	19
2.2.3 The ideal air standard Dual cycle	20
2.2.4 The ideal air standard Atkinson cycle	20
2.3 Comparison between thermodynamic and mechanical cycles	20
2.4 Additional performance parameters for internal combustion engines	21
2.5 Fuel/air cycle	23
2.6 Computer models	26
2.7 Conclusions	27
2.8 Examples	28
2.9 Questions	32
3 Combustion and fuels	35
3.1 Introduction	35
3.2 Combustion chemistry and fuel chemistry	37
3.3 Combustion thermodynamics	41
3.3a Use of conventional thermodynamic tabulations	43
3.3b Use of thermodynamic tabulations in Appendix A	44
3.3.1 The effect of the state of the reactants and products on calorific values	45
3.4 Dissociation	45
3.4.1 Calculation of the equilibrium combustion temperature and pressure	46
3.5 Pre-mixed combustion in spark ignition engines	48
3.5.1 Normal combustion	48
3.5.2 Abnormal combustion	50

3.6	Combustion in compression ignition engines	51
3.7	Fuels and additives	52
3.7.1	Characteristics of petrol	52
3.7.2	In-vehicle performance of fuels, and the potential of alcohols	58
3.7.3	Petrol additives	62
3.7.4	Characteristics of diesel fuel	63
3.7.5	Diesel fuel additives	65
3.7.6	Alternative diesel fuels	66
3.8	Engine emissions and hydrocarbon oxidation	69
3.8.1	Introduction	69
3.8.2	Nitric oxide formation	72
3.8.3	Hydrocarbon oxidation	74
3.8.4	Carbon monoxide emissions	78
3.8.5	Particulate matter	78
3.8.6	Emissions legislation	80
3.9	Combustion modelling	83
3.9.1	Introduction	83
3.9.2	Zero-dimensional models	83
3.9.3	Quasi-dimensional models	84
3.9.4	Multi-dimensional models	84
3.10	Conclusions	85
3.11	Examples	86
3.12	Questions	102
4	Spark ignition engines	109
4.1	Introduction	109
4.2	Combustion chambers	112
4.2.1	Conventional combustion chambers	112
4.2.2	High compression ratio combustion chambers and fast burn combustion systems	115
4.2.3	Advanced combustion systems	118
4.3	Catalysts and emissions from spark ignition engines	121
4.3.1	Introduction	121
4.3.2	Development of three-way catalysts	126
4.3.3	Lean-burn NO_x reducing catalysts	129
4.3.4	Ozone-forming potential	131
4.4	Cycle-by-cycle variations in combustion	131
4.5	Ignition systems	137
4.5.1	Ignition system overview	137
4.5.2	Control of ignition timing	139
4.5.3	The ignition process	141
4.6	Mixture preparation	142
4.6.1	The inlet manifold	142
4.6.2	Variable jet carburettor	144
4.6.3	Fixed jet carburettor	144
4.6.4	Fuel injection	146
4.6.5	Mixture preparation	149
4.7	Electronic control of engines	151
4.8	Conclusions	156
4.9	Example	157
4.10	Questions	157

5	Direct injection spark ignition engines	159
5.1	Introduction	159
5.2	Gasoline fuel injection systems	161
5.3	Wall-guided gasoline direct injection (GDI) engines	162
5.4	Spray-guided direct injection (SGDI) engines	164
5.5	Emissions	167
5.6	Downsizing	168
5.6.1	Superknock	170
5.7	Particulate matter emissions	171
5.7.1	Influence of GDI engine parameters on PM emissions	171
5.7.2	Influence of fuel composition on PM emissions	173
5.8	Conclusions	174
6	Compression ignition engines	175
6.1	Introduction	175
6.2	Direct injection (DI) systems	177
6.3	Indirect injection (IDI) systems	180
6.4	Cold starting of compression ignition engines	183
6.5	Fuel injection equipment	186
6.5.1	Injection system overview	186
6.5.2	Fuel injectors	187
6.5.3	Traditional injection pumps	192
6.5.4	Interconnection of traditional pumps and injectors	196
6.5.5	Common rail and electronic unit injector systems	198
6.6	Diesel engine emissions	202
6.6.1	Emissions legislation	202
6.6.2	Sources and control of engine out emissions	203
6.6.3	Catalytic after-treatment of diesel emissions	210
6.7	Homogeneous charge compression ignition (HCCI)	213
6.8	Conclusions	216
6.9	Example	216
6.10	Questions	217
7	Induction and exhaust processes	220
7.1	Introduction	220
7.2	Valve gear	220
7.2.1	Valve types	220
7.2.2	Valve-operating systems	221
7.2.3	Dynamic behaviour of valve gear	224
7.3	Flow characteristics of poppet valves	229
7.4	Valve timing	236
7.4.1	Effects of valve timing	236
7.4.2	Variable valve timing (VVT)	239
7.5	Unsteady compressible fluid flow	246
7.6	Manifold design	250
7.6.1	General principles	250
7.6.2	Acoustic modelling techniques	252
7.7	Silencing	254
7.8	Conclusions	254
7.9	Questions	256
8	Two-stroke engines	257
8.1	Introduction	257
8.2	Two-stroke gas flow performance parameters	259

8.3	Scavenging systems	260
8.4	Scavenge modelling	261
8.4.1	Perfect displacement scavenging model	261
8.4.2	Perfect mixing scavenging model	262
8.4.3	Complex scavenging models	263
8.5	Experimental techniques for evaluating scavenge and results for port flow coefficients	264
8.5.1	Firing engine tests	264
8.5.2	Non-firing engine tests	265
8.5.3	Port flow characteristics	266
8.6	Engine performance and technology	266
8.7	Concluding remarks	273
8.8	Questions	273
9	In-cylinder motion and turbulent combustion	274
9.1	Introduction	274
9.2	Flow measurement techniques	275
9.2.1	Background	275
9.2.2	Hot wire anemometry	275
9.2.3	Laser Doppler anemometry	276
9.2.4	Particle image velocimetry	277
9.2.5	Comparison of anemometry techniques	278
9.3	Turbulence	279
9.3.1	Turbulence definitions	279
9.3.2	In-cylinder turbulence	281
9.4	Turbulent combustion modelling	285
9.4.1	A turbulent entrainment model of combustion	285
9.4.2	Laminar burning velocities	286
9.4.3	The effect of turbulence on flame behaviour	287
9.5	Conclusions	290
9.6	Questions	290
10	Turbocharging and supercharging	291
10.1	Introduction	291
10.2	Supercharging	293
10.2.1	Thermodynamics of supercharging	293
10.2.2	Design and performance of superchargers	296
10.2.3	Supercharging case study	297
10.3	Radial flow and axial flow machines	299
10.3.1	Introduction and fluid mechanics	299
10.3.2	Thermodynamics of turbochargers	300
10.4	Turbocharging the compression ignition engine	307
10.5	Turbocharging the spark ignition engine	311
10.6	Practical considerations and systems	313
10.6.1	Transient response	313
10.6.2	Variable-geometry turbochargers, superchargers and two-stage turbocharging	314
10.7	Conclusions	320
10.8	Examples	320
10.9	Questions	323

11	Engine modelling	328
11.1	Introduction	328
11.2	Zero-dimensional modelling	329
11.2.1	Thermodynamics	329
11.2.2	Gas properties	331
11.2.3	Burn rate	332
11.2.4	Engine gas-side heat transfer	335
11.2.5	Induction and exhaust processes	338
11.2.6	Engine friction	339
11.3	Application of modelling to a turbocharged medium-speed diesel engine	340
11.3.1	Introduction	340
11.3.2	Building and validating the model	340
11.3.3	The effect of valve overlap on engine operation	342
11.4	Conclusions	343
12	Mechanical design considerations	345
12.1	Introduction	345
12.2	The disposition and number of the cylinders	345
12.3	Cylinder block and head materials	350
12.4	The piston and rings	351
12.5	The connecting-rod, crankshaft, camshaft and valves	353
12.6	Lubrication and bearings	356
12.6.1	Lubrication	356
12.6.2	Bearing materials	359
12.7	Advanced design concepts	361
12.8	Conclusions	363
12.9	Questions	363
13	Heat transfer in internal combustion engines	364
13.1	In-cylinder heat transfer	364
13.2	Engine cooling	366
13.2.1	Background	366
13.2.2	Spark ignition engines	368
13.2.3	Compression ignition engines	372
13.3	Liquid coolant systems	375
13.3.1	Conventional coolant systems	375
13.3.2	Cooling media performance	377
13.3.3	Advanced cooling concepts	380
13.4	Conclusions	384
14	Experimental facilities	385
14.1	Introduction	385
14.2	Quasi-steady engine instrumentation	386
14.2.1	Dynamometers	386
14.2.2	Fuel-consumption measurement	389
14.2.3	Air flow rate	390
14.2.4	Temperature and pressure	392
14.2.5	In-cylinder pressure measurement	392
14.2.6	Techniques for estimating indicated power	397
14.2.7	Engine test conditions	398
14.2.8	Energy balance	398

14.3	Experimental accuracy	399
14.4	Measurement of exhaust emissions	400
14.4.1	Infra-red absorption	401
14.4.2	Flame ionisation detection (FID)	402
14.4.3	Chemiluminescence	403
14.4.4	Oxygen and air/fuel ratio analysers	404
14.4.5	Exhaust smoke	406
14.4.6	Exhaust particulate matter measurement	407
14.4.7	Determination of EGR and exhaust residual (ER) levels	413
14.4.8	Determination of the air/fuel ratio from exhaust emissions	414
14.5	Computer-based combustion analysis	417
14.5.1	Introduction	417
14.5.2	Burn rate analysis	419
14.5.3	Heat release analysis	421
14.6	Advanced test systems	423
14.7	Conclusions	425
14.8	Question	426
15	Case studies	427
15.1	Introduction	427
15.2	The Rover K series engine	427
15.2.1	Introduction	427
15.2.2	The K16 base engine design	428
15.2.3	The Rover K series engine coolant and lubrication circuits	428
15.2.4	The Rover K series engine manifolding, fuelling and ignition systems	431
15.2.5	The Rover K series engine performance development	433
15.2.6	Concluding remarks	434
15.3	Chrysler 2.2-litre spark ignition engine	434
15.3.1	Background	434
15.3.2	The cylinder head	436
15.3.3	The cylinder block and associated components	437
15.3.4	Combustion control	439
15.3.5	Engine development	439
15.4	Ford 2.5-litre DI diesel engine	440
15.4.1	Background	440
15.4.2	Description	440
15.4.3	Combustion system	442
15.4.4	Turbocharged engine development	444
	Appendix A: Thermodynamic data	448
	Appendix B: Answers to numerical problems	472
	Appendix C: The use of SI units	474
	Bibliography	476
	References	477
	Index	489
