FUNDAMENTALS OF SHORT-RANGE FM RADAR

Contents

Preface		<i>xiii</i>
Part I		1
Chapter 1	Introduction to Frequency-Modulated Continuous-Wave Radar	3
1.1	Brief History	3
1.2	Examples of Use of FMCW Radar	5
1.2.1	Radio Altimeters	5
1.2.2	Level-Measuring Radar	6
1.2.3	Navigational Radar	6
1.2.4	Vehicle Collision Warning Systems	7
1.2.5	Precision Range Meter for Fixed Targets	8
1.2.6	Measurement of Very Small Motions	9
	References	9
Chapter 2	Basic Theory of Short-Range FM Radar	11
2.1	Principle of Operation and Basic Block Diagram of FM Radar	11
2.2	Typical Block Diagram of Short-Range FM Radar	13
2.2.1	System with Separate Transmitting and Receiving Antennas and Nonzero Intermediate Frequency	13
2.2.2	Circuit with Nonzero Intermediate Frequency and Complex Frequency Modulation	14
2.2.3	System with a Single Transmitting-Receiving Antenna	15
2.2.4	Autodyne System with a Single Antenna	16

2.3	General Expressions for Transmitted, Reflected, and Converted Signals	16
2.4	General Relationships for the Converted Signal with Modulation by a Periodic Function	19
2.5	General Relations for a Converted Signal with Dual-Frequency Modulation	22
2.6	General Relations for a Converted Signal with Modulation by a Modulated Periodic Function	24
2.7	Block Diagrams of Ultrasonic SRR and Features of the Converted Signal	25
Chapter 3	Characteristics of the Converted Signal with Different Transmitter Modulations	27
3.1	Sinusoidal Modulation	27
3.1.1	Modulation by a Single Sinusoid	27
3.1.2	Dual Sinusoidal Modulation	31
3.2	Linear Frequency Modulation	33
3.2.1	Modulation with an Asymmetrical Sawtooth Function	33
3.2.2	Modulation with Non-Isosceles and Symmetrical Sawtooth Functions	39
3.3	Discrete Modulation	42
3.4	Effects of Transmitter Modulation Nonlinearity on Converted Signal Parameters	45
Chapter 4	Integrated Methods of Converted Signal Processing	49
4.1	General Description	49
4.2	Effect of Parasitic Amplitude Modulation of the Transmission on Operation of the SRR Receiver	52
4.2.1	General Description	52
4.2.2	Methods of Decreasing PAM Signal Effects on Receiver Operation	54
4.3	Stabilization of the Frequency Deviation	59
4.4	Frequency Processing of the Converted Signal	63
4.4.1	Range Finding by Counting the Number of Zero Points of the Converted Signal for a Modulation Period	63
4.4.2	Measuring of the Instantaneous Frequency	65
4.4.3	Fixing the Instantaneous Frequency of the Converted Signal	67
4.4.4	Use of the Frequency Deviation of the Converted Signal	68
4.4.5	Applying Dual Sinusoidal Modulation	71

4.4.6	Single-Antenna Version with Zero Intermediate Frequency	75
4.4.7	Fixing the Frequency Deviation of the Converted Signal	76
4.5	Phase Processing of the Converted Signal	81
	References	88
Chapter 5	Spectral Methods of Processing the Converted Signal	89
5.1	General Description	89
5.2	Range Resolution	93
5.3	Radar Scan of Range	99
5.4	Spectral Processing Using the Parasitic AM Signal	109
5.5	Signal Processing on Separate Components of the Converted Signal Spectrum	111
5.5.1	Formation of the Discriminator Characteristic	111
5.5.2	Phase Processing of Separate Components of the Converted Signal Spectrum	113
	References	122
Part II		123
Chapter 6	Analysis of Constant Frequency Oscillators	125
6.1	Rule for Obtaining the Abbreviated Equations	126
6.2	Substantiation of the SAE Method	129
6.3	Examples of Deriving the Abbreviated Equations	133
6.3.1	Single-Tuned Oscillator with Fixed Bias Voltage	133
6.3.2	Single-Tuned Oscillator with Automatic Bias	137
6.4	General Abbreviated and Characteristic Equations of Anisochronous Oscillators	140
6.4.1	Abbreviated Equations of Anisochronous Oscillators	141
6.4.2	Stationary Modes of the Oscillator	144
6.4.3	General Characteristic Equation of the Anisochronous Oscillator	145
6.4.4	Condition of Self-Excitation of Oscillators with Inertial Active Elements	148
6.4.5	Order of the Characteristic Equation and the Sign of the Factor at the Upper Derivative	149
	References	150
Chapter 7	Analysis of FM Systems Using Symbolical Abbreviated Equations	151
7.1	Symbolical Abbreviated Equations for Controlled Self-Oscillatory Systems of Any Kind	151

7.2	Method of Symbolical Abbreviated Equations for FM Systems	156
7.3	Differential Equations of Some FM Systems	159
7.3.1	Differential Equations of a Parallel Conservative LC Circuit with Variable Capacitance and an Active Two-Pole	159
7.3.2	Differential Equations of a Parallel Dissipative LC Circuit with Variable Capacitance and an Active Two-Pole	161
7.4	Abbreviated Differential Equations of Single-Tuned Oscillators with Sinusoidal FM	162
7.5	Parasitic Amplitude Modulation in Autodynes for Various Types of Frequency Modulation	165
7.5.1	Sine Wave Frequency Modulation	169
7.5.2	Binary Frequency Modulation	170
7.5.3	Frequency Modulation by an Asymmetrical Sawtooth	170
7.5.4	Frequency Modulation with a Symmetrical Sawtooth	171
	References	172
Chapter 8	Output Voltage of a Frequency-Controlled Oscillator	173
8.1	Change of Output Voltage for Oscillators Tuned Discretely in Time	174
8.2	Parasitic Amplitude Modulation of Oscillations in Ideal Single-Tuned Circuits with Modulation of Their Natural Frequencies	180
8.3	Parasitic Amplitude Modulation of Output Voltage in Single-Tuned Oscillators with Frequency Modulation	183
8.4	Use of a Varicap as the Frequency Controller	193
	References	200
Chapter 9	Nonlinearity and Linearization in Varactor Control of FM Oscillators	201
9.1	Nonlinearity of Frequency Dependence of Single-Tuned Oscillators on Control Voltage of the Varactor with Large Frequency Changes	203
9.2	Nonlinear Distortions with Frequency Modulation Using Varactors	209
9.2.1	Nonlinear Distortions for Capacitor Coupling of the Varactor to the Oscillator Circuit	210

9.2.2	Nonlinear Distortions for Autoinductive Coupling of the Varactor to the Oscillator Circuit	212
9.2.3	Nonlinear Distortions in the Case of a Single-Tuned Oscillator Circuit with Allowance for RF Voltage on the Varactor	213
9.3	Linearization of Dependence of Oscillator Frequency on Control Voltage	215
9.4	Calculation of Diode-Resistive Correction Circuits	221
9.5	Decreasing the Nonlinear Distortion of the FM Signal with a Correcting Signal	223
Chapter 10	Theory of the Single-Tuned Transistor Autodyne and Optimization of Its Modes	227
10.1	Abbreviated Differential Equations for the Single-Tuned Transistor Autodyne	228
10.2	Linearized Differential Equations of Autodynes for Small Reflected Signals	231
10.3	Equivalent Circuits of Autodynes for Small Reflected Signals	233
10.4	The Form and Spectrum of the Output Signal of a Single-Tuned Transistor Autodyne	234
10.5	Form and Spectrum of the High-Frequency Signal from an FM Transistor Autodyne	239
10.6	Transfer Factors of an Autodyne on a Voltage and a Current and Mode Optimization	242
10.6.1	Analysis for Low Frequencies for a Particular Transistor	242
10.6.2	The High-Frequency Case	246
10.6.3	Choice of Mode with High Autodyne Sensitivity	247
	References	248
Chapter 11	Autodyne Modes of Transistor Oscillators with Strong Interference	249
11.1	The Common Properties of Autodyne Modes of the Single-Tuned Synchronized Oscillator	250
11.1.1	Abbreviated Equations for the Synchronized Oscillator	250
11.1.2	Abbreviated Equations in Normalized Parameters	252
11.1.3	Steady-State Synchronous Modes	255
11.1.4	Transients at Synchronism	257
11.1.5	Bifurcational Diagrams of a Transistor Autodyne	260

11.2	Transfer Factor of an Autodyne Subject to Synchronous Jamming	263
11.3	Bifurcations of Periodic Variations in the Synchronized Autodyne	269
	References	273
	List of Symbols	275
	About the Authors	281
	Index	285
