GNSS RECEIVERS FOR WEAK SIGNALS

Contents

	Preface	<i>xi</i>
1	Overview of GNSS Principles and Weak-Signal Processing and Techniques	1
1.1	Introduction	1
1.2	GPS Components	2
1.2.1	Space Segment	2
1.2.2	Control Segment	2
1.2.3	User Segment	3
1.3	Principles of User Position, Velocity, and Time Determination	3
1.4	GPS Signal Structure	5
1.5	GPS Navigation Message Structure	6
1.6	Precorrelation Signal Processing	7
1.6.1	Frequency Down Conversion	7
1.6.2	Sampling and Quantization	8
1.7	Overview of Acquisition Techniques	8
1.8	Overview of Bit Synchronization and Data-Estimation Techniques	13
1.9	Overview of Satellite Signal Tracking	16
1.9.1	Conventional GPS Tracking Loops	16
1.9.2	Satellite Signal-Tracking Techniques	19
1.10	Navigation Message Decoding	23
1.11	GPS Modernization and Galileo Global Navigation Satellite System	24

1.11.1	GPS Modernization	24
1.11.2	Galileo European Satellite Navigation System	26
1.12	Weak-Signal Applications	28
1.12.1	Wireless and Indoor Positioning	28
1.12.2	Orbit Determination of Geostationary and High-Earth-Orbit Satellites	30
1.13	Overview of Some Technical Concepts	30
1.13.1	Viterbi Algorithm	30
1.13.2	Estimation Techniques	31
1.13.3	Kalman Filter	32
1.14	GNSS Positioning Using Weak Signals	35
1.14.1	Weak-Signal Positioning Problems	35
1.14.2	Overview of the Developed Algorithms	36
	References	37
2	Signal Models	43
2.1	Introduction	43
2.2	Received Signals	43
2.3	Doppler Effect on the Code Rate	44
2.4	Local Signals	46
2.5	Signal Model for Acquisition	46
2.6	Signal Model for Fine Acquisition	47
2.7	Signal Model for Tracking	49
2.8	Clock Noise	51
	References	52
3	Signal Acquisition	53
3.1	Introduction	53
3.2	Algorithm 1: Circular Correlation with Multiple Data Bits	54
3.2.1	Handling the Doppler Effect on the Code Length	54
3.2.2	Handling Unknown Bit Edge Positions	56
3.2.3	Handling Unknown Data Bits	57
3.2.4	Eliminating Doppler Bins	58
3.2.5	Increasing the Predetection Integration Time	59

3.2.6	Implementing Circular Correlation with Multiple Data Bits	60
3.2.7	Determining the Most Likely Data Bit Combination	63
3.2.8	Computational Analysis of the CCMDB	65
3.3	Algorithm 2: Modified Double Block Zero Padding	67
3.3.1	Compensating for Doppler Effects	67
3.3.2	Handling Unknown Data Bits and Bit Edges	69
3.3.3	Implementing the MDBZP Algorithm	69
3.3.4	Computational Analysis	74
3.4	Signal Detection in the Presence of Strong Interfering Signals	76
3.4.1	The Interfering Power Is Less Than the Expected Signal Power	77
3.4.2	The Interfering Power Is Greater Than or Equal to the Expected Signal Power	77
3.5	High Dynamic Acquisition	78
3.5.1	The Doppler Rate Effect on the Acquisition	78
3.5.2	High Dynamic Acquisition Algorithm	81
3.6	Probabilities of Detection and False Alarm	82
3.6.1	Total Integration	83
3.6.2	Probability of False Alarm p_f	84
3.6.3	p_f Without Data Combination	86
3.6.4	p_f with Data Combination	88
3.6.5	Probability of Detection p_d	92
3.6.6	Threshold Calculation	98
3.6.7	Signal Detection with Loss	98
3.6.8	p_d and p_f for Signal Detection in the Presence of Strong Interfering Signals	99
3.7	Simulation and Results	99
3.8	Summary and Conclusions	112
	References	113
4	Fine Acquisition, Bit Synchronization, and Data Detection	115
4.1	Introduction	115
4.2	Signal Model	116

4.3	Acquisition, Fine Acquisition, and Bit Synchronization Module Relationship	117
4.4	Bit Synchronization and Data Bit Detection Algorithm	118
4.4.1	Minimization Solution	121
4.5	Extended States VA for Fine Acquisition	123
4.6	High Dynamic Fine Acquisition	126
4.7	Bit Synchronization and Navigation Message Detection in the Presence of Carrier-Tracking Errors	129
4.7.1	VA with an EKF	129
4.7.2	Extended Kalman Filter Model	130
4.7.3	EKF Estimation	132
4.8	Use of the Repeated Subframes	136
4.9	Computational Analysis and Reduction	138
4.10	Simulation and Results	140
4.11	Summary and Conclusions	150
	References	152
5	Code and Carrier Tracking and Navigation Message Decoding	155
5.1	Introduction	155
5.2	Tracking Module Interaction	156
5.3	Code Tracking	157
5.3.1	Timing Reconstruction and Local Signal Generation	158
5.3.2	EKF Code Tracking	161
5.3.3	First-Order EKF Code Tracking	167
5.3.4	Second-Order EKF	168
5.3.5	Second-Order EKF Code Tracking	170
5.4	Carrier Tracking	171
5.4.1	EKF Carrier Tracking	171
5.4.2	Square Root EKF	172
5.4.3	Square Root EKF Carrier Tracking	173
5.4.4	Second-Order EKF Carrier Tracking	175
5.4.5	Second-Order Square Root EKF Carrier Tracking	176

5.5	Navigation Message Decoding	176
5.5.1	Finding the Preamble	177
5.5.2	Identifying the Subframe IDs	178
5.5.3	Decoding Repeated Subframe Data	180
5.6	Maximizing the Time to Lose Lock	182
5.6.1	Adaptive Integration Time	182
5.6.2	Adaptive Early/Late Code-Delay Separation	184
5.6.3	Reinitialization of the Carrier Parameters	186
5.6.4	Reacquisition of the Code Delay	187
5.7	Handling of Random Sudden Changes in the Doppler Shift or the Doppler Rate	188
5.8	Computational Requirements	188
5.9	Simulation and Results	190
5.10	Summary and Conclusions	201
	References	202
6	Summary and Conclusions	203
6.1	Introduction	203
6.2	Summary of the Algorithms	203
6.3	Summary of the Acquisition Algorithms and Their Performance	205
6.3.1	Acquisition Algorithm Functionalities	205
6.3.2	Acquisition Performance	206
6.4	Summary of the Fine Acquisition and Tracking Algorithms and Their Performance	210
6.4.1	Fine Acquisition and Tracking Algorithm Functionalities	210
6.4.2	Tracking Performance	211
6.5	New Civil L2C and L5 GPS Signals	216
	References	217
	Acronyms	219
	Symbols	223
	About the Author	227
