# SMART ANTENNA ENGINEERING

# Contents

	<b>Preface</b>	<b><i>xiii</i></b>
	<b>Acknowledgments</b>	<b><i>xvii</i></b>
<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Wireless Mobile Communications Systems	1
1.2	Global Mobile Market Growth	3
1.3	Alternatives for Meeting Data Demand	4
1.4	Technology Peak Rates and Throughput	6
1.5	Why Smart Antennas?	7
1.6	Benefits of Smart Antennas	7
1.7	Types of Smart Antennas	8
1.8	Switched and Fixed Beam Antennas	9
1.9	Adaptive Arrays	10
	References	11
<b>2</b>	<b>Multiple Access Techniques for 2G and 3G Systems</b>	<b>13</b>
2.1	Introduction	13
2.2	Multiple Access Wireless Communications	14
2.2.1	FDMA Systems	14
2.2.2	TDMA Systems	15

2.2.3	Frequency Reuse	16
2.2.4	Cochannel Interference	18
2.2.5	CDMA Systems	20
2.3	Fundamentals of CDMA	21
2.3.1	Isolated Cell Capacity	24
2.3.2	CDMA Codes	25
2.3.3	IS-95 CDMA Systems	29
2.4	Third Generation Systems	36
2.4.1	CDMA2000	37
2.4.2	WCDMA	43
2.4.3	HSDPA	45
2.5	Basic CDMA Procedures	49
2.5.1	Acquisition State	49
2.5.2	Idle State	52
2.5.3	Access State and Call Setup	52
2.5.4	Traffic or Dedicated State	53
2.6	CDMA Embedded Cell Capacity	53
2.6.1	Multipath Fading	55
2.7	Coverage Versus Capacity Trade-Off	55
2.7.1	Coverage-Capacity Trade-Off in the Uplink	56
2.8	Conclusion	57
	References	57
	Selected Bibliography	59
<b>3</b>	<b>Spatial Channel Modeling</b>	<b>61</b>
3.1	Introduction	61
3.2	Radio Environments and Cell Types	63
3.3	The Multipath Channel	64
3.4	Channel Characterization	65
3.5	Path Loss Models	66
3.5.1	Okumura-Hata Propagation Models	66
3.6	Spatial Channel Modeling	67
3.6.1	Spatial Channel Model Parameters	68

3.6.2	Number of Clusters	69
3.6.3	Spatial Distribution of Clusters and Scatterers	69
3.6.4	Base Station Azimuth Power Spectrum and Angle Spread	69
3.6.5	Mobile Station Azimuth Power Spectrum and Angle Spread	74
3.7	Spatial Channel Model Application in System Simulations	74
3.8	Angle Spread Impact	77
	References	80
	Selected Bibliography	81
<b>4</b>	<b><u>Fixed Beam Smart Antenna Systems</u></b>	<b>83</b>
4.1	Introduction	83
4.2	Conventional Sectorization	83
4.3	Limitations of Conventional Sectorization	88
4.4	Antenna Arrays Fundamentals	89
4.4.1	Broadside and End-Fire Arrays	91
4.4.2	Impact of Number of Elements	92
4.4.3	Impact of Element Spacing	93
4.4.4	First Null Beamwidth	96
4.4.5	Half-Power Beamwidth	97
4.4.6	Array Directivity	99
4.4.7	Array Gain	100
4.4.8	Trade-Off Analysis	100
4.4.9	Impact of Element Pattern	101
4.4.10	Planar Arrays	101
4.5	Beamforming	105
4.6	The Butler Matrix	107
4.7	Spatial Filtering with Beamformers	110
4.8	Switched Beam Systems	111
4.9	Multiple Fixed Beam Systems	113
4.10	Adaptive Cell Sectorization in CDMA Systems	114
	References	116

<b>5</b>	<b>Adaptive Array Systems</b>	<b>117</b>
5.1	Uplink Processing	117
5.1.1	Diversity Techniques	117
5.1.2	Angle Diversity	118
5.1.3	Maximum Ratio Combining	121
5.1.4	Adaptive Beamforming	122
5.1.5	Fixed Multiple Beams Versus Adaptive Beamforming	130
5.2	Downlink Processing	132
5.2.1	Transmit Diversity Concepts	134
5.2.2	Transmit Diversity in 3G CDMA Standards	134
5.3	Downlink Beamforming	142
5.3.1	Spatial Signature-Based Beamforming	145
5.3.2	DOA-Based Beamforming	146
5.3.3	Maximum SNR	147
5.4	Conclusion	149
	References	151
	Selected Bibliography	152
<b>6</b>	<b>Smart Antenna Receivers and Algorithms for Radio Base Stations</b>	<b>159</b>
6.1	Reference Signal Methods	159
6.1.1	The Least Mean Square Algorithm	159
6.1.2	The Recursive Least Squares Algorithm	161
6.1.3	Blind Adaptive Beamforming	161
6.1.4	Least Squares	161
6.1.5	Constant Modulus Algorithm	162
6.1.6	Decision-Directed Algorithm	162
6.1.7	Cyclostationary Algorithms	163
6.1.8	Conjugate Gradient Algorithm	164
6.1.9	Lagrange Multiplier Method	167
6.1.10	Comparison of Adaptive Algorithms	169
6.2	Neural Network DOA-Based Beamforming	170
6.2.1	Generation of Training Data	174
6.2.2	Performance Phase of the RBFNN	174

---

6.3	Angle Spread Impact on Optimum Beamforming	175
6.4	Downlink Beamforming	181
6.5	Vector Rake Receivers	182
6.6	Channel Estimation	183
6.7	Beamforming	184
6.8	Conclusion	185
	References	186
<b>7</b>	<b>Coverage and Capacity Improvements in 3G Networks</b>	<b>191</b>
7.1	Introduction	191
7.2	Link Budgets and Coverage	192
7.2.1	Mobile Station Parameters	192
7.2.2	Base Station Parameters	193
7.2.3	System Parameters	193
7.2.4	Margins	193
7.2.5	Other Parameters	193
7.2.6	Fade Margin	194
7.2.7	Confidence (Cell Area)	195
7.2.8	CDMA Traffic Loading	196
7.3	Voice Services	197
7.3.1	Uplink Budgets	198
7.3.2	Downlink Budgets	198
7.4	Data Applications	203
7.5	Limiting Links for Coverage and Capacity	209
7.5.1	Coverage Limited Scenarios	210
7.5.2	Capacity Limited Scenarios	211
7.6	Smart Antennas Impact on Uplink Coverage and Capacity	211
7.6.1	Smart Antenna Impact on Downlink Capacity	216
7.7	Conclusions	226
	References	227

<b>8</b>	<b>Smart Antennas System Aspects</b>	<b>231</b>
8.1	Introduction	231
8.2	Third Generation Air Interfaces and Protocol Stacks	232
8.3	Physical Layer	233
8.3.1	Data Multiplexing	233
8.3.2	Transmit Chain UL/RL PN Scrambling/Spreading	235
8.3.3	DL/FL Physical Channel Formatting	235
8.4	Mobile Call States	237
8.4.1	WCDMA	237
8.4.2	CDMA2000	237
8.5	Mobility Procedures to Support High-Speed Data Transfer	238
8.5.1	Cell_FACH State or Control Hold Mode	240
8.5.2	Idle, Cell_PCH, or URA_PCH States	240
8.6	Procedures to Reestablish High-Speed Data Transfer	240
8.6.1	Cell_FACH State or Control Hold Mode	240
8.6.2	Idle Mode, Cell_PCH, or URA_PCH States	240
8.7	Packet Data Services	240
8.7.1	WCDMA Approach	241
8.7.2	CDMA2000 Approach	241
8.8	Pilot Channels	241
8.8.1	CDMA2000	241
8.8.2	WCDMA	243
8.9	Channels Applicable for Downlink Beamforming	243
8.10	Overview of Major Radio Network Algorithms	244
8.10.1	Power Control	244
8.10.2	Initial Power Setting	245
8.10.3	Admission Control	246
8.10.4	Congestion Control	246
8.10.5	Soft/Softer Handoff	246
8.10.6	Hard Handoff	247
8.11	System Impact of Advanced Spatial Techniques	247
8.11.1	Transmit Diversity	247

---

8.11.2	Fixed Beam Approach	248
8.12	Beam Steering/Adaptive Beamforming	258
8.12.1	Channel Estimation at the Mobile	259
8.12.2	Advantages and Disadvantages	260
8.12.3	Uplink Beamforming	260
8.13	Conclusion	261
	References	262
<b>9</b>	<b>Mobile Stations' Smart Antennas</b>	<b>265</b>
9.1	Introduction	265
9.2	Multiple-Antenna MS Design	268
9.3	Combining Techniques	272
9.3.1	Selection (Switched) Diversity	272
9.3.2	Maximal Ratio Combining	272
9.4	Adaptive Beamforming or Optimum Combining	272
9.5	RAKE Receiver Size	278
9.6	Mutual Coupling Effects	279
9.7	Dual-Antenna Performance Improvements	280
9.8	Downlink Capacity Gains	284
9.9	Conclusions	286
	References	287
<b>10</b>	<b>MIMO Systems</b>	<b>289</b>
10.1	Introduction	289
10.2	Principles of MIMO Systems	290
10.2.1	SISO	291
10.2.2	SIMO	291
10.2.3	MISO	292
10.2.4	MIMO	293
10.3	Transmission Strategies	295
10.3.1	Water Filling	296
10.3.2	Uniform Power Allocation	296

10.3.3	Beamforming	297
10.3.4	Beam Steering	297
10.4	MIMO Approaches	297
10.5	MIMO Advantages and Key Performance Issues	298
10.6	RF Propagation Characterization	299
10.7	SINR Environment	299
10.8	Spatial Multiplexing	300
10.9	Conclusion	302
	References	303
