Foreword	<i>xi</i>
Preface	<i>xiii</i>
<b>CHAPTER 1</b>	
Electrically Small Multiband Antennas	1
1.1 Introduction	1
1.2 The Definition of Electrically Small	2
1.3 Fundamental Antenna Properties Definitions	3
1.3.1 Impedance, Efficiency, VSWR, and Gain	3
1.3.2 Bandwidth and Quality Factor (Q)	6
1.4 Fundamental Limits of Small Antennas	10
1.5 Special Considerations for Integrated Multiband Antennas	12
1.6 Fundamental Approaches to Small Integrated Antenna Design	16
1.6.1 The Monopole Antenna	16
1.6.2 The Inverted-L Antenna	17
1.6.3 The Inverted-F and Planar Inverted-F Antennas	18
1.7 Finite Ground Plane Effects on Small Antenna Performance	22
References	30
<b>CHAPTER 2</b>	
Multiband Multisystem Antennas in Handsets	33
2.1 Introduction	33
2.1.1 Frequencies and Systems	33
2.1.2 Typical Specifications	36
2.2 Multiband Techniques	36
2.2.1 Radiating and Balanced Mode Theory	37
2.2.2 Analysis of PIFA Slots	41
2.2.3 Analysis of PIFA Shorting Pins	43
2.3 Multisystem Techniques	45
References	52

<b>CHAPTER 3</b>	
<b>Multiband Planar Wire Antennas</b>	<b>53</b>
3.1 Introduction	53
3.2 Multiband Planar Monopole Antennas	59
3.2.1 Microstrip-Fed Dual-Band Monopole Antenna	60
3.2.2 CPW-Fed Dual-Band Monopole Antenna	60
3.2.3 Meandered CPW-Fed Multiband Monopole Antenna	62
3.3 Inverted-L Multiband Antennas	63
3.3.1 Modified Double Inverted-L Antenna for Multiband Operation	63
3.3.2 Inverted-L Antenna with a Parasitic Element for Dual-Band Operation	67
3.4 Inverted-F Antennas for Dual-Band Operation	68
3.4.1 Spiraled Inverted-F Antenna for Dual-Band Operation	68
3.4.2 Coupling Dual-Band Inverted-F Antenna	71
3.4.3 Inverted-FL Antennas with a Parasitic Inverted-L Element for Bandwidth Enhancement	74
3.5 T-Shaped Antennas for Multiband Operation	75
3.5.1 Single T-Shaped Antenna for Multiband Operation	75
3.5.2 Double T-Shaped Antenna for Dual-Band Operation	77
3.5.3 T-Shaped Antenna with a Parasitic Inverted-L Element for Bandwidth Improvement	78
3.6 Meandered Multiband Antennas	79
3.6.1 A Nonuniform Meandered Antenna with a Forked Ground Plane for Multiband Operation	80
3.6.2 A Compact Multiband Meandered Planar Antenna	82
3.7 M-Shaped Planar Monopole for Multiband Operation	83
3.8 Two-Strip Planar Antennas for Broadband and Multiband Operation	85
3.8.1 Broadband Two-Strip Antenna	85
3.8.2 Broadband/Dual-Frequency Two-Strip Antenna	89
3.9 Conclusions	92
References	93
<b>CHAPTER 4</b>	
<b>Printed Multiband Fractal Antennas</b>	<b>95</b>
4.1 Introduction	95
4.1.1 Brief Background on Fractal Geometry	95
4.1.2 Fractals in Nature	97
4.1.3 Prefractals: Truncating a Fractal to Useable Complexity	99
4.1.4 How Fractals Can Be Used as Antennas and Why Fractals Are Space-Filling Geometries	100
4.1.5 The Fractal Dimensions of Box Counting, Hausdorff, and Similarity	101
4.2 Fractals Defined by Transformations—Self-Similar and Self-Affine Sets	109
4.2.1 Iterated Function Schemes: The Language of Fractals	109
4.2.2 Self-Affine Sets	112

4.3	Deterministic Fractals as Antennas	113
4.3.1	Fractals as Wire Antenna Elements	114
4.3.2	Fractal Patch Elements	125
4.3.3	Circularly Polarized Microstrip Fractal Antennas	138
4.4	Fractal Arrays and Fractal Volume Antennas	141
4.4.1	Multiband Fractal Arrays	143
4.5	Conclusions	147
	References	147

## CHAPTER 5

	Miniaturized Integrated Multiband Antennas	151
5.1	Design Considerations for Integrated Multiband Handset Antennas	151
5.1.1	Hearing Aid Compatible Handsets	152
5.2	Effect of the Terminal on the Antenna Behavior	153
5.2.1	Effect of the Size of the Chassis	153
5.2.2	Effect of the Handset Components	157
5.3	Modal Analysis	164
5.3.1	The Theory of Characteristic Modes	165
5.3.2	Practical Applications	172
	Acknowledgments	182
	References	229

## CHAPTER 6

	Multiband Handset Antennas for MIMO Systems	187
6.1	Introduction	187
6.2	Design Considerations for MIMO Systems	188
6.2.1	Diversity Techniques	190
6.2.2	Volume Constraints: The MIMO Cube	198
6.3	MIMO Techniques in a Handset	198
6.3.1	Effect of Antenna Efficiency	199
6.3.2	Effect of User Presence	212
6.3.3	Effect of Antenna Correlation	219
6.4	Combined Diversity Techniques for Optimum Handset MIMO Performance	223

## CHAPTER 7

	Communication Performance of Mobile Devices	235
7.1	Introduction	235
7.2	Antenna Efficiency	241
7.2.1	Radiation Efficiency	242
7.2.2	How to Obtain the Antenna Efficiency	242
7.2.3	Conductive Cable Problem	243
7.2.4	Total Radiated Power and Total Isotropic Sensitivity	246
7.3	User Influence	247

---

7.3.1	Experimental Setup	248
7.3.2	Repeatability Test	251
7.3.3	Variation Due to Different Users	252
7.3.4	Influence of Hand Position	254
7.3.5	Summary	257
7.4	Mean Effective Gain	258
7.4.1	Power Distribution Models	260
7.4.2	Single Antenna	266
7.4.3	Multiple Antennas	274
7.5	Standard Measurement Setup Using Phantoms	281
7.5.1	Setup for Measurements of Mobile Handset Radiation Patterns	282
7.5.2	Measurement Uncertainty	284
7.5.3	Errors Due to Insufficient Sampling Density of Radiation Pattern	284
7.5.4	Investigation of Phantom Type Influence on Performance	285
7.5.5	Uncertainty Due to Incorrect Handset Positioning on Phantom	288
	References	292
	List of Acronyms	295
	About the Editor	299
	About the Authors	301
