Contents

Note to Readers ix
Preface xi
About the Author xiii

Chapter One
The Discovery of Metals 1

Chapter Two
Iron in America—1645 to 1870 13
Ironmaking Spreads to More Colonies 13
Canal Building in Pennsylvania 18
Anthracite Coal Replaces Charcoal in Ironmaking 21
Ironmaking Pioneer John Fritz 21
Ironmaking Expands for the Railroads 23

Chapter Three
The Age of Steel—1870 to 1900 25
Experimental Work Begins on “Air Blowing” to Make Steel 25
Bessemer Process Enters Production 29
Bessemer Steel Becomes an Industry 30
Andrew Carnegie—The Immigrant 32
Carnegie Enters the Iron and Steelmaking Industry 34
Captain Billy Jones Joins Carnegie Steel 36
Carnegie Steel Expands 39
The Great Strike of 1892 at Homestead 41
New Steel Markets Open 42
Andrew Carnegie Sells His Steel Empire 44

Chapter Four
Metallography—The New Science of Metals 47
Early Studies of the Internal Structure of Metal 48
X-Ray Diffraction 52
The History of Metals in America

The Discovery of Precipitation Hardening 53
Research on the Mechanism of Age Hardening 57

Chapter Five
The History of Engineering Alloy Steels 59
Chromium Alloy Steels 60
Nickel Alloy Steels 60
Nickel-Chromium Alloy Steels 62
Automotive Demand for Alloy Steels 63
Development of Specifications for Alloy Steels 64
An Organization for Heat Treaters 65
Research on the Hardening of Steel 66
The Transformation of Austenite 68
The Solution to Hardenability Testing 69
The Tempering of As-Quenched Martensite 71

Chapter Six
The Toolmakers 73
The Age of Making Steel 74
Crucible Melting to Make Steel 75
New Alloy for Tool Steels 80
Research on High-Speed Steel 82
Advanced Research on High-Speed Steel 83
Molybdenum as a Substitute for Tungsten 84
Cleveland Twist Drill Company is First Adopter of Molybdenum High-Speed Steel 85
MIT Research on High-Speed Tool Steels 86
Research at the Union Carbide and Carbon Laboratories 88
Advanced Work in Sweden 89

Chapter Seven
Stainless Steel 93
The Discovery of Stainless Steel 94
Patents 96
Applications 99
The 1930s and 1940s 99
Development of New Alloys 100
The Argon Oxygen Decarburization Process 102
New Uses 103
Chapter Eight
Aluminum—The Light Metal 107
The Invention 108
Charles Martin Hall 109
A Pilot Plant for Making Aluminum 110
The Pilot Plant 111
A New Production Plant 113
The Move to Niagara Falls, New York 114
Early Aluminum Applications 114
Raw Materials 117
World War I 118
Ongoing Research 119
Alloy Development 121
Aluminum for World War II 123
Aerospace Applications for Aluminum Alloys 124
Recent New Alloys 126

Chapter Nine
Titanium—A New Metal for the Aerospace Age 129
Titanium Made at General Electric Corporation 129
Invention of a Process for Making Titanium 131
Studies of Properties 134
Sponge Production 135
Research Progress 142
The Titanium Metallurgical Laboratory 143

Chapter Ten
Pioneers in Metals Research 153
Henry Marion Howe 153
Albert Sauveur 158
Isaiah (Zay) Jeffries 161
Paul Dyer Merica 165
Edgar C. Bain 168
Samuel Leslie Hoyt 173
Francis L. VerSnyder 178

Chapter Eleven
The Integrated Steel Industry—1901 to 1959 187
The United States Steel Corporation 187
Bethlehem Steel Corporation 194
Little Steel Companies 201
Labor 202

Chapter Twelve
The Decline of the Integrated Steel Industry 207
Strike of 1959 207
Technology and Imports 208
Devastation in Pittsburgh 213
Other Widespread Closures 214
Minimills 214
Mittal 215

Chapter Thirteen
The Steel Minimills 219
The First Minimill 219
Heffernan’s Third Minimill 222
The First Minimill for Flat Products 222
Steel Beams and Railroad Rails 223
Iverson Leads Industry 223
Growth of the Minimill Industry 223
Minimill Consolidation 226
New Processes for Making Iron 228

Index 231
