

Safety and Reliability in Cooperating Unmanned Aerial Systems

List of Chapters:

Preface

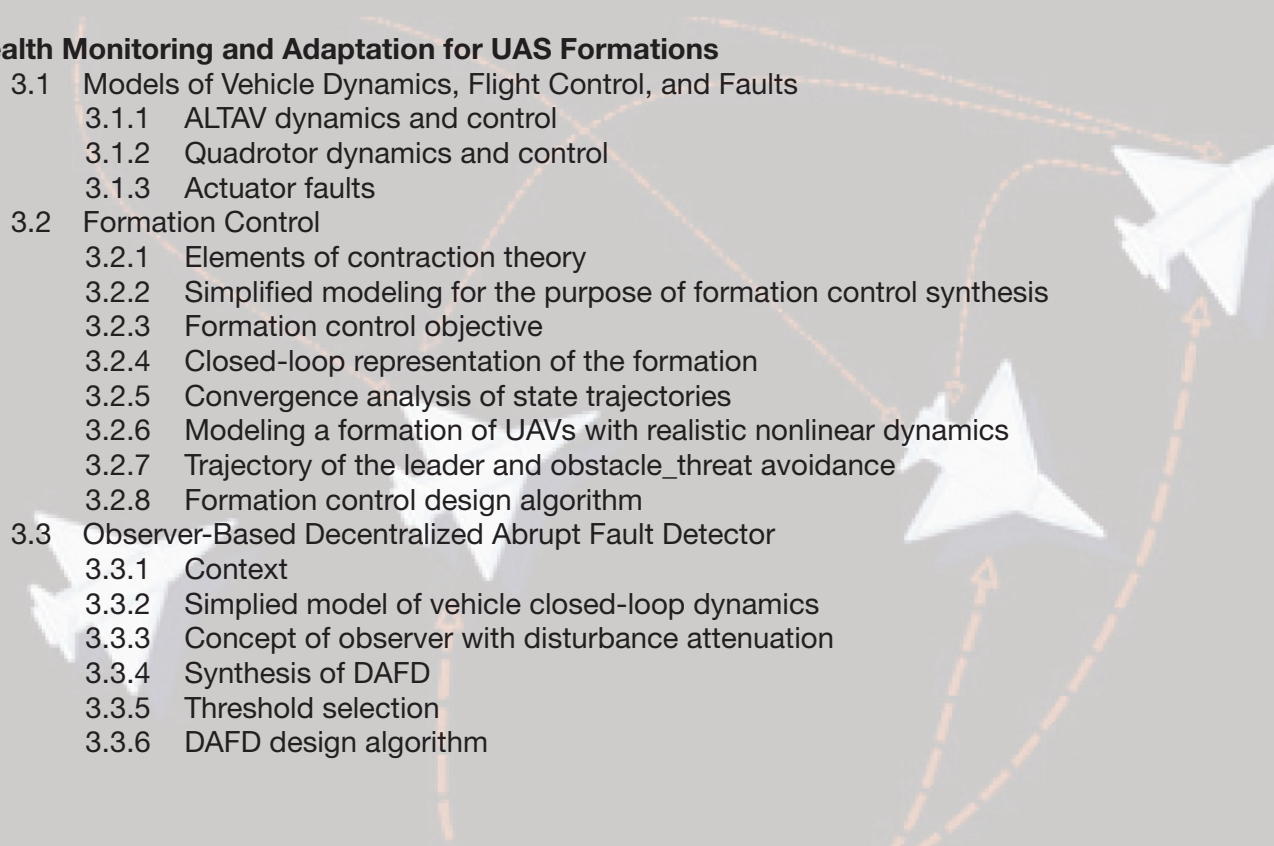

1. Introduction

- 1.1 Unmanned Aerial Systems
- 1.2 Cooperative Control
- 1.3 Contingencies
 - 1.3.1 Faults and failures of UAV components
 - 1.3.2 Vehicle damage
 - 1.3.3 Information flow faults
 - 1.3.4 Team anomalies and collisions
 - 1.3.5 Environment effects
 - 1.3.6 Book overview

2. Health Management for the Individual Vehicle: A Review

- 2.1 Passive and Active Fault-Tolerant Control Systems
- 2.2 Fault/Failure Detection and Diagnosis
- 2.3 Control Reconfiguration
- 2.4 FTC and FDD Techniques for MAV and SUAV

3 Health Monitoring and Adaptation for UAS Formations

- 3.1 Models of Vehicle Dynamics, Flight Control, and Faults
 - 3.1.1 ALTAV dynamics and control
 - 3.1.2 Quadrotor dynamics and control
 - 3.1.3 Actuator faults
 - 3.2 Formation Control
 - 3.2.1 Elements of contraction theory
 - 3.2.2 Simplified modeling for the purpose of formation control synthesis
 - 3.2.3 Formation control objective
 - 3.2.4 Closed-loop representation of the formation
 - 3.2.5 Convergence analysis of state trajectories
 - 3.2.6 Modeling a formation of UAVs with realistic nonlinear dynamics
 - 3.2.7 Trajectory of the leader and obstacle_threat avoidance
 - 3.2.8 Formation control design algorithm
 - 3.3 Observer-Based Decentralized Abrupt Fault Detector
 - 3.3.1 Context
 - 3.3.2 Simplified model of vehicle closed-loop dynamics
 - 3.3.3 Concept of observer with disturbance attenuation
 - 3.3.4 Synthesis of DAFD
 - 3.3.5 Threshold selection
 - 3.3.6 DAFD design algorithm
- 

- 3.4 Signal-Based Decentralized Non-Abrupt Fault Detector
 - 3.4.1 Context
 - 3.4.2 Networked information and coupling effects
 - 3.4.3 Estimator of heading angle
 - 3.4.4 Statistical test for DNaFD
 - 3.4.5 DNaFD design algorithm
- 3.5 UAV Command Adaptation
- 3.6 Simulations and Experiments
 - 3.6.1 Formation control of unicycles
 - 3.6.2 Formation control of quadrotor aircraft
 - 3.6.3 DAFD and formation control of ALTAVs
 - 3.6.4 DAFD and quadrotor formation control
 - 3.6.5 DNaFD and formation control of ALTAVs
 - 3.6.6 Decentralized fault detection for mixed-type, concurrent actuator faults
 - 3.6.7 DAFD_DNaFD in closed loop with individual vehicle FDD system
 - 3.6.8 A note on the digital implementation

4. Decision Making and Health Management for Cooperating UAS

- 4.1 Coordinated Rendezvous of UAS Formations
 - 4.1.1 Context
 - 4.1.2 Related work
 - 4.1.3 Multi-formations
 - 4.1.4 Models
 - 4.1.5 UAS-threat encounters modeled as Markov decision processes
 - 4.1.6 Problem formulation
 - 4.1.7 Decision policies: perfect information
 - 4.1.8 Decision policies: partially known environment
 - 4.1.9 Design of CHM and decision making system
- 4.2 Cooperation Despite Information Flow Faults
 - 4.2.1 Context
 - 4.2.2 Impact of information flow fault on UAS decision policies
 - 4.2.3 Health state estimation
 - 4.2.4 Distributed computations of W'
- 4.3 Numerical Simulations
 - 4.3.1 Single target area and perfectly known environment
 - 4.3.2 Sequence of targets and perfect knowledge of environment
 - 4.3.3 The case of perturbed MDPs
 - 4.3.4 Successive zones of surveillance in partially known environment
 - 4.3.5 Information flow faults
- 4.4 Distributed and Parallel Implementation of Optimization Algorithms
 - 4.4.1 Context
 - 4.4.2 Architecture
 - 4.4.3 Distributed and parallel simulation environment
 - 4.4.4 Experiments
