

Future Technology for Hybrid and Pure Electric Cars 2015-2025

*How all components and
structure will change
completely*

Dr Peter Harrop, Franco Gonzalez and Raghu Das

1.	EXECUTIVE SUMMARY AND CONCLUSIONS	1
1.1.	The market for electric cars	1
1.1.1.	Definitions	1
1.1.2.	Cars as part of the big picture	2
1.1.3.	Further details of e-car trends	2
1.1.4.	League table of top 13 electric vehicle companies	5
1.1.5.	Awkward tipping point	6
1.1.6.	Forecasting challenges	7
1.2.	Forecasts 2014-2025	8
1.2.1.	On-road cars	8
1.2.2.	Geographical demand	11
1.2.3.	US market in 2014	14
1.2.4.	Europe and Japan	15
1.2.5.	China	17
1.2.6.	Successful strategies	18
1.2.7.	Plug-in market dynamics	20
1.2.8.	Security of forecasts	21
1.2.9.	New models as lead indicator	21
1.2.10.	MicroEVs/quadricycles etc	21
1.2.11.	Golf cars will have no growth	24
1.2.12.	Profitability	25
1.2.13.	Why there will be a tipping point for pure electric cars	25
1.3.	Disruptive change and merging of all parts	26
1.4.	Range extenders including fuel cells	28
1.5.	Batteries	29
1.6.	Electric motors	32
1.7.	Power electronics	33
1.7.1.	Increased performance and complexity	33
1.7.2.	Wide band gap semiconductors	35
1.8.	Supercapacitors: more than meets the eye	37
1.8.1.	Across batteries in cars	37
1.8.2.	Completely replacing batteries in hybrid cars	39
1.8.3.	Across fuel cells in cars	40
1.9.	Plugging in: when, where, why?	40
1.10.	Progress of Toyota and Tesla	41
1.10.1.	Market and technology priorities	41
1.10.2.	Toyota simplifies priorities and Tesla lands Gigafactory partnership	42

2.	INTRODUCTION	47
2.1.	The world wakes up to global warming and oil running out	47
2.2.	Danger signs	48
2.3.	Government support	49
2.4.	Rapid increase in number of manufacturers	50
2.5.	Can the grid cope?	51
2.6.	Changing mobility needs – urban mobility	52
2.7.	Fuel cell mobility	53
2.8.	How green are fuel cell cars really?	54
2.9.	Global Markets, the battery vs fuel cell war will be fought in China and the USA	58
2.10.	Gigafactory	60
2.11.	New forms of collaborative consumption – car sharing or car clubs	61
2.12.	Narrow Vehicles	64
3.	PURE ELECTRIC CARS	79
3.1.	Consumer attitudes to electric vehicles	80
3.2.	The car powertrain as a portfolio of technologies	84
3.3.	Evolution of the value chain structure – the opportunity window	85
3.4.	Manufacturing	89
3.5.	The arguments against	94
3.6.	Déjà vu	95
3.7.	Golf EVs	98
3.8.	Energy positive solar car	100
4.	HYBRID CARS OVERVIEW	101
4.1.	Construction and advantages of hybrids	101
4.2.	Evolution	101
4.3.	Market drivers	102
4.3.1.	Leading indicators	102
4.4.	Interesting new technology in recent concept cars	104
4.4.1.	Subaru's Viziv 2 Concept	104
4.4.2.	Toyota Supercapacitor Yaris	106
4.5.	Examples of 2015 hybrid car launches	107
5.	HYBRID CAR MODES AND TECHNOLOGY	109
5.1.	Series vs parallel hybrid	109
5.2.	Modes of operation of hybrids	110
5.2.1.	Plug in hybrids	110
5.2.2.	Charge-depleting mode	111
5.2.3.	Blended mode	111
5.2.4.	Charge-sustaining mode	111
5.2.5.	Mixed mode	111

5.3.	Microhybrid is a misnomer	112
5.4.	Deep hybridisation	112
5.5.	Hybrid vehicle price premium	113
5.6.	Battery cost and performance are key	114
5.7.	Tradeoff of energy storage technologies	116
5.8.	Advantages and disadvantages	117
5.9.	Can supercapacitors replace batteries?	118
5.10.	Supercapacitors: lithium-ion capacitors	119
5.11.	What is a range extender?	119
5.12.	What will be required of a range extender?	119
5.13.	Three generations of range extender	120
5.13.1.	First generation range extender technology	123
5.13.2.	Second generation range extender technology	123
5.13.3.	Third generation range extender technology	124
5.14.	Energy harvesting	126
5.15.	Trend to high voltage	128
5.16.	Trend to distributed components	129
5.17.	Trend to flatness then smart skin	130
6.	143 LITHIUM BATTERY MANUFACTURERS COMPARED	133
7.	KEY ENABLING TECHNOLOGIES FOR CARS	149
7.1.	Three key enabling technologies become six	149
7.2.	Many new forms of range extender	150
7.3.	Supercapacitors	151
7.4.	Energy harvesting	152
7.5.	Power electronics	153
7.6.	Printed and laminar electronics	154
7.7.	Lightweight design	155
7.8.	Structural components and smart skin	157
7.9.	Innovative charging	158
7.10.	Military land vehicles and in-wheel motors	159
7.11.	Third generation traction batteries	160
7.12.	Tesla's battery coup – winners and losers	160
7.12.1.	The theory says no	161
7.12.2.	IDTechEx analysis	161
7.12.3.	Enormity	161
7.12.4.	Winners and losers	161
7.12.5.	Infrastructure needs reduce	162
7.12.6.	IDTechEx forecasts more cautious	162
7.12.7.	Blood bath	162
7.12.8.	Territorial implication	163
7.12.9.	China and Korea	163

8.	FUEL CELL CARS FCEV	165
8.1.	Overview	165
8.2.	Current status and potential	168
8.3.	History/development of the technology	168
8.4.	Mass market	168
8.5.	Fuel cell vs. other powertrains	169
8.6.	Hydrogen infrastructure:	170
8.7.	Value proposition	170
8.8.	Standards	171
8.9.	Necessary investment	171
8.10.	Improvement of the legislation in North America and Europe for hydrogen vehicles	172
8.10.1.	USA	172
8.10.2.	EU	173
8.11.	R&D, initiatives and demonstration projects, H2 infrastructure:	173
8.11.1.	EU	173
8.11.2.	UK	174
8.11.3.	Germany	175
8.11.4.	Nordic countries	175
8.11.5.	Further countries in Europe	176
8.11.6.	Japan	176
8.11.7.	South Korea:	177
8.11.8.	USA	177
8.11.9.	India	178
8.11.10.	China	178
8.11.11.	South Africa	179
8.11.12.	Brazil	179
8.11.13.	Beside the BRICS	179
8.12.	Players	180
8.12.1.	Traditional fuel cell car manufacturers	180
8.12.2.	The pioneers	181
8.12.3.	But some changed for batteries...	181
8.12.4.	Some started early and still don't show clear direction...	181
8.13.	Some alliances and initiatives	182
8.14.	The OEMS and their fuel cell cars in detail	183
8.14.1.	Daimler	183
8.14.2.	GM	184
8.14.3.	Honda	185
8.14.4.	Toyota	186
8.14.5.	VW Group	187
8.14.6.	Audi	187
8.14.7.	Hyundai	188
8.14.8.	Nissan	189
8.15.	Some newer suppliers and users examined	190

8.15.1.	Overview	190
8.15.2.	Intelligent Energy	190
8.15.3.	Michelin F-CITY	191
8.15.4.	Riversimple	192
8.15.5.	Belenos F-500 (fuel cell range extender)	192
8.15.6.	Ecomove (QBEEK)	193
8.15.7.	GreenGT	195
8.15.8.	Other approaches	196
8.16.	Shale gas profitability doubts cast shadow on fuel cell cars launch	197
