Preface

xiii

CHAPTER 1

Barriers to Entry in Automotive Production and Opportunities with Emerging Additive Manufacturing Techniques 1

Introduction 2

Cost Model Framework 3

Barriers in Traditional Manufacturing 4

Metal Stampings 4

Injection-Molded Plastics 5

Metal Castings 6

Reducing Tooling Investment 6

Emerging Manufacturing Techniques Cost Assessment—Direct Printing 7

K-Frame 7

Door Trim 10

Emerging Manufacturing Techniques Cost Assessment—Additive Manufacturing of Tooling 11

Conclusions 14

References 15

Acknowledgments 15

Definitions/Abbreviations 15

CHAPTER 2

Contribution of 3D Printing in Tooling and Portable Tools Application Case for a Smart Driller 17

Introduction 18

3D Printing—Advantages and Drawbacks 18

The Advantages 19

The Drawbacks 19

A Framework of 3D Manufacturing for Tools and Tooling	<u>19</u>
Look for Tools or Tooling Equipment that are Currently Compromised	<u>19</u>
Think Function First	<u>20</u>
Minimize Over-Engineering and Post-Processing	<u>20</u>
Example 1: Structural Design	<u>20</u>
Functional Specifications	<u>20</u>
Combine Functions and Complexity	<u>21</u>
Example 2: Functional Redesign	<u>21</u>
Specifications	<u>21</u>
The Result	<u>22</u>
Combine Functions and Complexity	<u>22</u>
The Result	<u>24</u>
Example 3: Design for Customization	<u>24</u>
Specifications	<u>24</u>
Combine Function and Diversity	<u>25</u>
Production	<u>25</u>
The Result	<u>25</u>
Application Case for a Smart Driller	<u>26</u>
The Specifications	<u>26</u>
The Mechanical Design	<u>27</u>
Think Function First	<u>28</u>
Optimization	<u>28</u>
Customization	<u>29</u>
The Production	<u>30</u>
The Result	<u>30</u>
Conclusion	<u>32</u>

CHAPTER 3

Advanced Castings Made Possible Through Additive Manufacturing	<u>33</u>
Background	<u>34</u>
Simple Castings	<u>35</u>
Complex Castings	<u>38</u>
Conclusions	<u>45</u>
References	<u>46</u>
Acknowledgments	<u>47</u>

CHAPTER 4

Design and Manufacture of Titanium Formula SAE Uprights using Laser-Powder-Deposition	<u>49</u>
Introduction	<u>50</u>
Upright Design	<u>50</u>
Design and Analysis	<u>50</u>
Preliminary Design	<u>50</u>
Finite Element Analysis	<u>51</u>
Laboratory Testing	<u>52</u>
Material Selection	<u>52</u>
Metallurgical Testing	<u>53</u>
Upright Manufacture	<u>54</u>
Process Capabilities Testing	<u>54</u>
Upright Manufacturing	<u>55</u>
Conclusion	<u>57</u>
Acknowledgments	<u>57</u>
References	<u>57</u>

CHAPTER 5

Construction of a CubeSat Using Additive Manufacturing	<u>59</u>
Introduction	<u>60</u>
Body	<u>60</u>
Material Choice	<u>62</u>
Construction of Bus and Propulsion Module	<u>65</u>
Step 1	<u>65</u>
Step 2	<u>65</u>
Step 3	<u>65</u>
LS Process Benefits	<u>66</u>
3- Items to Consider when Designing for SLS Process	<u>66</u>
Bus Construction	<u>66</u>
Conclusions	<u>67</u>
References	<u>68</u>

CHAPTER 6

Application of Topology Optimization Techniques in Aircraft Design	<u>69</u>
Introduction	<u>70</u>
Topology Optimization: An Overview	<u>70</u>
Aircraft Pylon Structure	<u>71</u>
Conventional Design Process of Pylon	<u>72</u>
Topology Optimization of Pylon Structure	<u>73</u>
Step 1	<u>73</u>
Step 2	<u>73</u>
Step 3	<u>74</u>
Step 4	<u>74</u>
Step 5	<u>74</u>
Concept Design Using Optimized Model	<u>75</u>
Validation of the Concept Design	<u>75</u>
Design Process of Pylon with Topology Optimization	<u>76</u>
Conclusion	<u>76</u>
Acknowledgments	<u>76</u>
References	<u>77</u>

CHAPTER 7

Design of an Aluminum Alloy Swingarm and Its Weight Minimization using Topology Optimization	<u>79</u>
Introduction	<u>80</u>
Design Considerations in a Swingarm	<u>80</u>
Service Tire Clearance	<u>80</u>
Shock Absorber Mounting	<u>80</u>
Disc Caliper Mounting/Torque Rod Mounting	<u>80</u>
Chain Adjuster	<u>80</u>
Packaging/Clearances	<u>81</u>
Swingarm Construction	<u>81</u>
Different Types of Swingarm	<u>81</u>
Swinging Fork	<u>81</u>
Cantilever	<u>82</u>
Single-Sided Swingarm	<u>82</u>

Topology Optimization	<u>82</u>
Optimization Objective/Problem	<u>83</u>
Load Cases	<u>83</u>
Bending Resistance (Load Case 1)	<u>83</u>
Maximum Breaking Force	<u>84</u>
Maximum Cornering Load (Load Case 2)	<u>84</u>
Torsional and Lateral Stiffness	<u>84</u>
Casted Swingarm versus Tubular/Sheet Metal-Type Swingarm	<u>84</u>
Analyses and Results	<u>84</u>
Load Case	<u>85</u>
Baseline Design	<u>85</u>
First Iteration	<u>85</u>
Swingarm Model A	<u>85</u>
Optimized Layout	<u>85</u>
Interpretation	<u>85</u>
Second Iteration	<u>86</u>
Swingarm Model B	<u>86</u>
Optimized Layout	<u>87</u>
Interpretation	<u>88</u>
Validation Design VD1	<u>88</u>
Linear Static Analysis	<u>88</u>
Draft Analysis	<u>89</u>
VD1 Review	<u>89</u>
Third Iteration	<u>89</u>
Swingarm Model C	<u>89</u>
Optimized Layout	<u>90</u>
Validation Design VD2	<u>90</u>
Linear Static Analysis	<u>90</u>
Draft Analysis	<u>91</u>
VD2 Review	<u>92</u>
Validation Design VD3	<u>92</u>
Linear Static Analysis	<u>92</u>
Draft Analysis	<u>93</u>
VD3 Review	<u>93</u>
Summary/Conclusions	<u>94</u>
References	<u>95</u>
Definitions/Abbreviations	<u>95</u>

CHAPTER 8

Acoustically Absorbing Lightweight Thermoplastic Honeycomb Panels	<u>97</u>
Introduction	<u>98</u>
Description of the Concept	<u>99</u>
Sandwich Panels for Stiffness with Minimal Weight	<u>99</u>
Interconnected Cells for Lower Frequency Absorption	<u>100</u>
Modeling	<u>101</u>
Tuning the Absorption Band(s)	<u>101</u>
Effect of Number of Connected Hexagonal Cells	<u>101</u>
Effect of Skin Hole Size and Number	<u>101</u>
Effect of Hexagon Cell Size (Height, Width)	<u>103</u>
Effect of Passageway Opening Size	<u>104</u>
Mixing Multiple Channel Lengths and Hole Sizes	<u>104</u>
Prototype Panel Preparation	<u>105</u>
Normal Incidence Absorption Prototype	<u>105</u>
Random Incidence Absorption: Milled Prototypes	<u>105</u>
Random Incidence: Full-Size Panels	<u>106</u>
Acoustical Measurement Methods	<u>106</u>
Normal Incidence Absorption Measurement Method	<u>106</u>
Random Incidence Absorption Measurement Method	<u>107</u>
Random Incidence Transmission Loss Measurement	<u>107</u>
Experimental Results Compared to Modeled Results	<u>107</u>
Normal Incidence Absorption Experiments	<u>107</u>
Random Incidence Absorption Experiments	<u>108</u>
Milled Prototype Samples	<u>108</u>
Full-Size Panels	<u>108</u>
Random Incidence Transmission Loss Experiments	<u>110</u>
Mechanical Properties	<u>110</u>
Flexural Tests	<u>110</u>
Compression Tests	<u>111</u>
Impact Tests	<u>112</u>
Summary/Conclusions	<u>113</u>
Future Work	<u>113</u>
References	<u>113</u>

CHAPTER 9

Development of Lightweight Multifunctional Structures	<u>115</u>
General	<u>116</u>
Multifunctional Structures	<u>117</u>
Benefits and Applications	<u>118</u>
The Mulfun Project: Development of BB1/BB2 Demonstration Breadboards	<u>119</u>
Design: BB1	<u>119</u>
High-Conductivity CFRP	<u>120</u>
Core	<u>121</u>
Design: BB2	<u>121</u>
Embedded Mini Heat Pipes	<u>121</u>
CTE Mismatch	<u>123</u>
Breadboard Manufacturing and Test	<u>123</u>
Mathematical Modeling and Performance Trade-offs	<u>124</u>
Thermal Mathematical Model	<u>124</u>
Performance Trade-offs	<u>124</u>
Conclusions and Future Work	<u>126</u>
Acknowledgments	<u>128</u>
References	<u>128</u>
Definitions and Acronyms	<u>129</u>

CHAPTER 10

Biologically Inspired Design of Lightweight and Protective Structures	<u>131</u>
Introduction	<u>132</u>
Biological Energy Absorbing Structures	<u>133</u>
Porous Structure and Damping	<u>133</u>
Airbags and Cushion	<u>134</u>
Organic Circular or Spherical Shapes	<u>134</u>

BID Methodology for Protective Structures	<u>134</u>
Design of Engineering Protective Structures	<u>135</u>
Helmet Design	<u>135</u>
Introduction	<u>135</u>
Methods	<u>137</u>
<i>The Initial Design of Helmet and Voxelization</i>	<u>137</u>
<i>Extracting a Finite Part and Performing Topology Optimization</i>	<u>137</u>
Results: Imbibing Mesostructure into the Macrostructure	<u>138</u>
3D-Printed Model	<u>138</u>
Vehicle Body Design	<u>139</u>
Introduction and Initial Design	<u>139</u>
Methods	<u>139</u>
<i>Topology Optimization and Crashworthiness</i>	<u>139</u>
<i>Bone Function Adaptation</i>	<u>140</u>
Manufacturing of Vehicle Body	<u>140</u>
Conclusion	<u>140</u>
References	<u>141</u>
Acknowledgments	<u>142</u>
