CHAPTER 5
Signal Processing Strategies Using Micro-Systems for In Situ Health Monitoring of Aircraft

Introduction 39
Overview of Current SHM Technologies 40
  Sensing Strategies 41
  Signal Processing Strategies 42
Implementation of In Situ Monitoring 43
  System Configuration 43
  Subband Filtering Techniques 44
    Formulation of the Problem 44
      Single Degree-of-Freedom Systems 44
      Multiple Degrees-of-Freedom Systems 45
    Implementation of the Strategy 45
      Modeling Tools 45
      Subband Time-Frequency Model 46
      Mechanical Interpretation of the Model 46
      On-Line Identification 46
  Experimental Validation 47
    Experimental Setup 47
    Preliminary Results 48
Conclusion 49
Acknowledgments 49
References 49
Contact 50

CHAPTER 6
Vibration Response and Damage Detection of Carbon/Epoxy Beams at Elevated Temperatures Using the Hilbert-Huang Transform

Introduction 52
Hilbert-Huang Transform 53
Description of Composite Test Beams 54
Experimental Method 55
  Experimental Setup 55
  Data Acquisition System 55
## Contents

- Results and Discussion 56
- Modal Characteristics 56
- Intrinsic Mode Functions 56
- Summary/Conclusions 60
- References 61

### CHAPTER 7

**Structural Health Monitoring in Civil Aviation: Applications and Integration** 63

- Introduction 64
- Fatigue Monitoring 64
- Fatigue Damage Sensing 67
- Summary 70
- References 71

### CHAPTER 8

**Demonstration of a Structural Damage Detection System in Fast Jet Flight Trials** 73

- Introduction 73
- Description of the Flight Test Installation 74
- Flight Clearance Requirements 75
- Flight Test Program 76
- Results from the Flight Test 76
- Conclusion 78
- Acknowledgments 78
- References 78

### CHAPTER 9

**Embedded Fiber Optic Sensors for High-Strain Composite Components** 79

- Introduction 80
- Phase 1 Optical Fiber Embedment 81
  - Fiber Optic Strain Sensor System 82
  - Time-Domain Multiplexing 82
  - Test Coupon 82
  - Mold 83
  - Optical Fiber Ingress/Egress 83
CHAPTER 11

Intelligent Flexible Materials for Deployable Space Structures (InFlex)

Introduction 109

Goals and Objectives of the Program 111

Configuration Analysis 113

Research Results 114
  Health Monitoring System 114
  Breakpoint Detection 116
  Tomography Systems 118
  Communications Systems 118
  HMS Parasitic Mass Assessment 119
  Display and Warning System 119
  Self-Healing Materials 120
  Low-Permeation Materials 122
  Antimicrobial Functionality 123
  Power Generation and Storage 125
  Radiation Protective Materials 126

Conclusion 127

Acknowledgments 128

References 128
