

Alternative Cars in the 21st Century

A New Personal Transportation Paradigm

Second Edition

List of Chapters:

Foreword

Acknowledgments

Introduction

Chapter One

Personal Mobility in Crisis

- Population Growth and Expanding Industrialization
- An Expanding World with Diminishing Petroleum Resources
- Impact of Transportation Energy Use
- Energy Demand in Developed Countries
- Blight of Urban Traffic
- Conventional Ideas for Taming the Automobile
- Controlling the Automobile with Higher Fuel Costs
- Overloading the Environment with Waste Products
- Global Warming and Climatic Change
- A New Paradigm for Personal Mobility

Chapter Two

Personal Mobility Vehicles for the 21st Century

- A New Perspective on Personal Mobility Solutions
- Reducing the Hardware Overhead of Personal Mobility
- Impact of Vehicle Size on Traffic Congestion
- Impact of Vehicle Mass on Emissions
- Ultra-Low-Mass Personal Mobility Products
- Ultra-Low-Mass Multipurpose Passenger Car
 - Commuter Car
 - Narrow-Lane Vehicle
 - Urban Car
 - Sub-Car
- New Personal Mobility Products and the Marketplace
 - Vehicle Theme
 - Occupant Zone
 - Seating Layout
 - Ingress and Egress
 - Modular Design

Flexible/Plastic Body Panels

Electronic Automobile

Three-Wheel Platform as a Marketing Tool

Potential Market for Alternative Cars

Vehicle Ownership and Use Trends

ULM Vehicle and Multivehicle Households

Effect of Reduced Seating Capacity

Market Impact of Battery-Electric Power

Subliminal Messages and New Consumer Values

A New Paradigm for Personal Transportation

Cars as a Subsystem of the Total Transportation System

Large-Scale Personal Mobility as an Outmoded Concept

Chapter Three

The Technology of Fuel Economy

Ingredients of Fuel Economy

Urban Driving Cycle Patterns' Effect on Fuel Economy

Accessory Loads

Road Load

Developing a Road Load Graph

Rolling Resistance

Tires: Balance Between Ride, Handling, and Drag

Other Components of Rolling Resistance

Automobile Aerodynamics

Working with the Relative Wind

Streamlining and Aerodynamic Drag

Profile Drag

Induced Drag

Parasitic Drag

Skin Friction

Internal Flow

Frontal Area

Fuel-Efficient Powertrain

Prime Mover

Losses of Converting Fuel to Mechanical Power

Power and Fuel Efficiency Characteristics of the Reciprocating IC Engine

Challenge and Opportunity of Part-Load Fuel Consumption

Rotary Valves

Variable Compression Ratio

Variable Valve Actuation

Diesel Engine

Supercharging

Low-Heat-Rejection Engines

Two-Stroke Cycle Engine

Active Thermo-Atmosphere Combustion

Transmission as a Tool for Reducing Fuel Consumption

Continuously Variable Transmissions

New Technology and Alternative Cars

Chapter Four

Alternative Fuels

Advantages and Disadvantages of Alternative Fuels

Alcohol Fuels

Ethanol (C₂H₅OH)

Methanol (CH₃OH)

Source and Abundance

Environmental and Safety Factors

Compatibility with Current IC Engine Design

Cold-Starting

Lubricant Contamination

Increased Engine Wear

Materials Compatibility

Use in Fuel Cells

Liquefied Petroleum Gases

Source, Composition, and Properties

Vehicle Emissions

Vehicle Fuel System

Compatibility with IC Engines

Natural Gas as a Transportation Fuel

Source and Supply

Environmental and Safety Factors

Compatibility with Current Motor Vehicle Design

Fuel Metering

Onboard Storage of Natural Gas

Compressed Natural Gas

Liquefied Natural Gas

Adsorbent Storage

Difficulties and Costs

Enhanced Capability ANG Storage

Creative Tank Designs for ANG Systems

Home Refueling with Natural Gas

Hydrogen/Methane Blends

Hydrogen as a Fuel

Source and Abundance

Supply Infrastructure and Cost

Storage Technologies

Compatibility with IC Engine

Fuel Cell

Electric Power

Alternative Fuels in the 21st Century

Chapter Five

Electric and Hybrid Vehicles

Battery-Electric Vehicles

Battery-Electric Cars: Their Energy Source and Emissions

Electric Vehicle Onboard Energy Flow

Regenerative Braking

Mechanical Overview

Electric Motor

Alternating Current for Electric Cars Controller

Pulse-Width Modulator

Controllers for Alternating Current

Motor as a Subsystem of the

Transmission

Integrated Electronic Controls

Onboard Energy Storage

Lead-Acid Battery (Pb/Acid)

Aluminum-Air (Al/Air)

Lithium-Iron Sulfide (Li/FeS)

Lithium-Ion (Li/Ion)

Lithium Polymer Battery (LPB)

Nickel-Cadmium (Ni/Cd)

Nickel-Iron Battery (Ni/Fe)

Nickel Metal Hydride (NiMH)

Nickel-Zinc (Ni/Zn)

Sodium-Sulfur (Na/S)

Vanadium Redox Flow Battery

Zinc-Air Battery (Zn/Air)

Zinc-Bromine (Zn/Br)

Kinetic Energy Storage

Battery-Electric Vehicles and Vehicle Downsizing

Purpose-Built Battery-Electric Cars

General Motors EV-1

Ford THINK City

Nissan Hypermini

Hybrid-Electric Vehicles

Hybrid Configurations

Series Hybrid

Parallel Hybrid

Energy Storage Systems for HEVs

Prime Movers for HEVs

Fuel Cells

Production and Prototype Hybrids

Honda Insight
Toyota Prius
Ford Prodigy
General Motors Precept
DaimlerChrysler Dodge ESX3
DaimlerChrysler NECAR 5 Fuel-Cell Vehicle

General Motors' Lean Machine (late 1970s–early 1980s)

Jephcott's Micro (U.S. patents allowed to lapse, early 1980s)

Vandenbrink Carver

Limitations of the Three-Wheel Configuration
Special Acknowledgment

Chapter Six

Three-Wheel Cars with Tilting Three-Wheel

Vehicle Information by Tony Foale

Mechanically Simple Design
Sports Car Handling
Rollover Threshold
Single Front or Single Rear Wheel
Single Front Wheel (1F2R)
Single Rear Wheel (2F1R)
Tandem or Side-by-Side Seating
Examples of Nontilting Three-Wheel Vehicles

TurboPhantom

VW Scooter

Trihawk

Tri-Magnum

Sparrow

Gizmo

Tilting Three-Wheelers

TTW Classification

Wheel Layout

Lean Control

Lean Limit

Number of Tilting Wheels

Dynamic Behavior of Tilting Three-Wheelers

Active Lean Control

Control System Strategies

Tires

Suspension Loading

General Characteristics

1F2R with Nonleaning Rear Wheels

Rollover Threshold

Roll/Yaw Coupling

Pitch/Lean Coupling

TTWs with All Leaning Wheels

TTWs with No Leaning Wheels

Examples of Tilting Three-Wheelers

Transit Innovations Project 32 Slalom (U.S.

Patents Pending, 1997–2001)

Mercedes F300 Life Jet (1997–unknown)

Millennium Tracer (1996–ongoing)

Calleja (U.S. Patent No. 5,611,555: 1997–ongoing)

Chapter Seven

Safety and Low-Mass Vehicles

Vehicle Safety in Perspective
Accident Statistics and Automobile Size
Accident Statistics and Other Variables
Japanese Experience
Smaller Cars Require Better Safety Engineering
Automobile Crash Dynamics
Occupant Crash Protection
Restraint Systems
Seat Belts
Air Bags
Intelligent Safety Systems
Crash Management Strategy for Low-Mass Vehicles
Advanced Systems for Improving Automobile Safety
New Standards for New Vehicle Types
Three-Wheel Cars

Chapter Eight

Intelligent Transportation Systems

by Dr. Wonshik Chee

1. What Is ITS?
 2. What Is AVCS?
 3. Longitudinal Maneuvers
 4. Lateral Maneuvers
 5. Future of ITS
- Special Acknowledgment

Chapter Nine

Alternative Cars in Europe

Early European Microcars as a Metaphor of Their Environment

Isetta and Heinkel

Messerschmitt

Market Was Headed in the Opposite Direction

Transportation in a Revitalized Europe

European Transit Systems

Future of Microcars in Europe

Index

About the Author
