Vehicle Accident Analysis and Reconstruction Methods

List of Chapters

Preface
Acknowledgments

CHAPTER 1. Uncertainty in Measurements and Calculations
1.1 Introduction
1.2 Upper and Lower Bounds
1.3 Differential Variations
1.4 Statistics of Related Variables
1.4.1 Linear Functions
1.4.2 Arbitrary Functions (Approximate Method)
1.5 Application Issues

CHAPTER 2. Tire Forces
2.1 Introduction
2.2 Rolling Resistance
2.3 Slip, Longitudinal Force and Lateral Force
2.3.1 Longitudinal Slip
2.3.2 Comments about Friction, the Coefficient of Friction and the Frictional Drag Coefficient
2.3.3 Longitudinal Force
2.3.4 Lateral Force
2.4 Friction Circle and Friction Ellipse
2.5 Modeling Combined Steering and Braking Forces
2.5.1 The Bakker–Nyborg–Pacejka Model for Lateral and Longitudinal Tire Forces
2.5.2 Fiala Lateral Tire Force Model
2.5.3 Modified Nicolas–Comstock Combined Tire Force Model
2.6 Application Issues

CHAPTER 3. Straight–Line Motion
3.1 Uniform Acceleration and Braking Motion
3.1.1 Equations of Constant Acceleration
3.1.2 Grade and Equivalent Drag Coefficients
3.2 Vehicle Forward–Motion Performance Equations
3.3 Stopping Distance
3.3.1 Distance from Speed
3.3.2 Speed from Distance
3.4 Application Issues
3.4.1 Stopping Distance
3.4.2 Motion Around Curves

CHAPTER 4. Critical Speed from Tire Yaw Marks
4.1 Estimation of Speed from Yaw Marks
4.2 Yaw Marks
4.2.1 Radius from Yaw Marks
4.3 Critical Speed
4.3.1 Critical Speed Formula
4.3.2 Roadway with Superelevation
4.4 Application Issues
4.4.1 Tire Marks in Practice
4.4.2 Other Curved Tire Marks
4.4.3 Coefficient of Friction, f
4.4.4 Driver Control Modes
4.4.5 Tire Forces in a Severe Yaw
4.4.6 The Critical Speed Formula and Edge Drop-Off (Road Edge Reentry)
4.5 Uncertainty of Critical Speed Calculations
4.5.1 Estimation of Uncertainty by Differential Variations
4.5.2 Accuracy of the Critical Speed Method
4.5.3 Statistical Variations

CHAPTER 5. Reconstruction of Vehicular Rollover Accidents
5.1 Introduction
5.2 Rollover Test Methods
5.3 Documentation of the Accident Site
5.4 Pretrip Phase
5.5 Trip Phase
5.5.1 Analysis of Vehicle Trip
5.5.2 Complex Vehicle Trip Models
5.5.3 Reconstruction of the Trip Phase
5.5.4 Rim Contact
5.6 Roll Phase
5.6.1 Speed Analysis
5.6.2 Analysis of the Rolling Vehicle
5.6.3 Information about the Accident Scene and Site
5.6.4 Information about the Accident Vehicle
5.6.5 Rollover Reconstruction Tools
5.7 Example Rollover Reconstruction
5.7.1 Speed Analysis
5.7.2 Detailed Roll Analysis
5.8 Vehicle Roll Rate during Rollover
5.9 Further Considerations

CHAPTER 6. Analysis of Collisions, Impulse–Momentum Theory
6.1 Introduction
6.2 Quantitative Concepts
6.3 Point–Mass Impulse–Momentum
