

Car Suspension and Handling

Fourth Edition

List of Chapters:

Preface to the Fourth Edition

Preface to the First Edition

Notation

Chapter 1

Introduction

- 1.1 Scope and Layout of the Book
- 1.2 The Function of the Suspension System
- 1.3 Suspension Geometry
- 1.4 Kinematics and Compliance (K&C)
- 1.5 Vehicle Dynamics
- 1.6 References

Chapter 2

Disturbances and Sensitivity

- 2.1 Road Irregularities
- 2.2 Influence of Wheel Size
- 2.3 Subjective Assessment of Ride
- 2.4 Human Sensitivity to Vibration
- 2.5 Measurement Standards for Vibration
- 2.6 Influence of Noise on Assessment of Ride Comfort
- 2.7 Influence of Phase of Differential Vibration on Assessment of Ride Comfort
- 2.8 References

Chapter 3

The Wheel and Tire

- 3.1 Introduction
- 3.2 The Wheel Rim
- 3.3 Tire Size Designation
- 3.4 Tire Construction Types
- 3.5 Tire Properties with Reference to Vehicle Braking
- 3.6 Tire Properties with Reference to Vehicle Cornering
- 3.7 Rolling Resistance

3.8 Tire Uniformity

3.9 Aspect Ratios

3.10 Tire Selection and Air Chamber Geometry

3.11 References

Chapter 4

Steering

- 4.1 Dynamic Function of the Steering System
- 4.2 Steering Angles: Effects of Tire Slip Angles and Steering and Suspension Kinematics
- 4.3 Relative Positions of Front- and Rear-Wheel Tracks
- 4.4 Understeer and Oversteer
- 4.5 Directional Stability
- 4.6 Torque in the Steering System
- 4.7 Steering Torque Effects Due to Steering Geometry
- 4.8 The Steering Column
- 4.9 Steering Gear
- 4.10 Constant Velocity (CV) Driveshaft Joints
- 4.11 Torque Steer Effects
- 4.12 Front-Wheel Steering Oscillations—Shimmy
- 4.13 Power Assistance
- 4.14 Electric Power Steering
- 4.15 Rear-Wheel Steering Systems
- 4.16 References

Chapter 5

Suspension Systems and Their Effects

- 5.1 An Introduction to Suspension Design
- 5.2 Suspension Systems in Common Use
- 5.3 Spring Function and Theory
- 5.4 Energy Storage Capacities
- 5.5 Spring Natural Frequencies

Car Suspension and Handling

Fourth Edition

- 5.6 Leaf Springs
 - 5.7 Torsion Bars and Coil Springs
 - 5.8 Coil Spring Rates
 - 5.9 Wishbone Suspensions—Effect on Wheel Rates
 - 5.10 Gas Springs
 - 5.11 Ride Height Control
 - 5.12 Bump and Rebound Stops
 - 5.13 Interaction of Front and Rear Suspensions to Single Applied Disturbances
 - 5.14 Effect of Regularly Repeated Disturbances
 - 5.15 Suspension Roll-Center Height Determination
 - 5.16 Suspension Geometry for Anti-Dive and Anti-Squat
 - 5.17 Compliance—Effect on Road Noise and Harshness
 - 5.18 References
- Chapter 6 Dampers**
- 6.1 Types of Damping
 - 6.2 Damping Effects on Vehicle Ride Spectra
 - 6.3 Damping Characteristics
 - 6.4 Measurement of Damper Characteristics
 - 6.5 Hydraulic Dampers
 - 6.6 Types of Hydraulic Dampers
 - 6.7 Lever-Arm Dampers
 - 6.8 Telescopic Dampers
 - 6.9 Other Arrangements—Hydropneumatic
 - 6.10 Critical Damping Coefficients
 - 6.11 References
- Chapter 7 Front Suspensions**
- 7.1 Front Beam Axle—Reasons for Decline in Use
 - 7.2 Independent Suspensions
 - 7.3 Significant Obsolete Systems
 - 7.4 Recent Independent Suspension Systems
 - 7.5 Double Steering-Pivot Front Suspensions
 - 7.6 Friction in Strut and Link Type Suspensions
 - 7.7 References
- Chapter 8 Rear Suspensions**
- 8.1 Classification of Types
 - 8.2 Live Rear Axles
 - 8.3 De Dion Axles
 - 8.4 Dead Rear Axles for Front-Wheel Drive Vehicles
 - 8.5 Twist-Beam Rear Axles for Front-Wheel Drive Vehicles
 - 8.6 Independent Rear Suspension Systems—Swing Axles
 - 8.7 Independent Rear Suspension Systems—Trailing and Semi-Trailing Arms
 - 8.8 Independent Rear Suspension Systems—Wishbones
 - 8.9 Independent Rear Suspension Systems—Multi-Link, and Strut and Link
 - 8.10 References
- Chapter 9 Drive Layouts and Their Effects**
- 9.1 Drive Layouts
 - 9.2 Background to Front-Wheel Drive
 - 9.3 Front-Drive Versus Rear-Drive Arguments
 - 9.4 Modern Design Priorities
 - 9.5 Mass Distribution
 - 9.6 Dynamic Characteristics
 - 9.7 Four-Wheel Drive
 - 9.8 References
- Chapter 10 Advanced Suspension Systems**
- 10.1 Ride and Handling Limitations
 - 10.2 Background to Advanced Suspensions
 - 10.3 Interconnected Suspensions
 - 10.4 Self-Leveling Suspensions
 - 10.5 Adaptive Damping
 - 10.6 Active Attitude Control
 - 10.7 Fully Active Suspension Systems
 - 10.8 Slow Active Suspension Systems
 - 10.9 Electronic Stability Aids
 - 10.10 References
- Chapter 11 Computer Aided Engineering (CAE) for Suspension**
- 11.1 Computer Use in Suspension Design and Engineering
 - 11.2 Structural Engineering

Car Suspension and Handling

Fourth Edition

- 11.3 Computer Aided Engineering for Suspension Kinematics and Compliance (K&C)
- 11.4 Computer Aided Engineering for Vehicle Dynamics
- 11.5 Computer Aided Engineering for Noise Analysis and Refinement Prediction
- 11.6 References

Appendix 1 Disturbances and Structural Durability

- A1.1 Designing and Developing for Durability
- A1.2 Special Surfaces
- A1.3 Durability Cycles
- A1.4 Laboratory Test Methods
- A1.5 Road Load Data
- A1.6 Powertrain Durability
- A1.7 References

Appendix 2 More on Tires

- A2.1 Introduction
- A2.2 Pneumatic Tires
- A2.3 Tubeless Tires
- A2.4 Rubber Compounds
- A2.5 Tread Patterns
- A2.6 Extended Mobility Systems
- A2.7 Non-Dimensional Tire Data
- A2.8 References

Appendix 3 Steering Calculations and Worked Examples

- A3.1 Steering Ball Joints
- A3.2 Ball Pin Shank Fitting
- A3.3 Ball Joints—Provision of Friction
- A3.4 Steering Angles of Inner and Outer Front Wheels
- A3.5 Different Inner and Outer Wheel Lock Angles
- A3.6 Calculations for Independent Suspension Systems—Worked Examples
- A3.7 Torque Steer Components
- A3.8 Inertia Torques Affecting Steering
- A3.9 Steering Geometry Errors, Bump, and Rebound
- A3.10 Incorrect Relative Lengths of Cross-Steering Tube and Linkage Arms
- A3.11 Incorrect Alignment of Steering Tube and Linkage
- A3.12 Inertia Torques Due to Fore and Aft Links—Worked Examples

- A3.13 Effect of Weight Transference in Cornering
- A3.14 Sideways Forces—Effect of Influences Other than Lateral Acceleration
- A3.15 Cornering Behavior—Worked Examples
- A3.16 References

Appendix 4 Suspension Calculations and Worked Examples

- A4.1 Basic Suspension System
- A4.2 Vibrations of Basic System—Approximate Frequencies
- A4.3 True Frequency, Sprung Mass
- A4.4 True Frequency, Unsprung Mass
- A4.5 Spring/Mass Systems—Worked Examples
- A4.6 Effect of Viscous Damping on Natural Frequency—Critical Damping
- A4.7 Effect of Damping on Forced Vibration Amplitudes
- A4.8 Critical Damping—Worked Examples
- A4.9 Relative Pitch and Bounce Frequencies— k^2/ab Ratio
- A4.10 Effect of k^2/ab Ratio on Pitching Tendency
- A4.11 k^2/ab Ratio and Pitch Frequency
- A4.12 k^2/ab Ratio about the Vertical Axis—Effect on Transient Behavior
- A4.13 k^2/ab Ratio about the Vertical Axis—Desirable Value
- A4.14 Pitch Excitation—Coupled Suspensions
- A4.15 Attitude Changes Due to Braking
- A4.16 Attitude Changes Due to Traction
- A4.17 Attitude Changes—Inboard Brakes and Independent Suspension at the Drive End
- A4.18 Percentage Anti-Dive and Anti-Squat—Calculation Requirements
- A4.19 Anti-Pitch Rate of Car Suspension—Worked Examples
- A4.20 Anti-Roll Rates
- A4.21 Roll Angles in Cornering
- A4.22 Moment of Inertia in Roll—Worked Examples
- A4.23 Mass Distribution Front and Rear
- A4.24 References
