1 Introduction to vehicle safety

- (a) Objectives
- (b) Good intentions are not enough!
- (c) Adequacy of knowledge
- (d) Someone else's responsibility
- (e) The hear-no-evil problem
- (f) Generic implications

2 Basic concepts of vehicle safety

- (a) Underlying principles
 - (1) The public health analogy
 - (2) Prioritization of effort
 - (3) The significant trilogy
 - (4) Cause and effect
 - (5) Immediate objectives
 - (6) Justifiable reliance on conclusions
- (b) Fail-safe
- (c) Alternative design
- (d) Redundancy and derating
- (e) Fault tolerance
- (f) Safety factors
 - (1) Design for uncertainty
 - (2) The disappearing safety factor
 - (3) Identifying the component safety factor
- (g) Objective appraisals
- (h) Unloading the driver
- (i) Positive guidance
- (j) Warnings and instructions
- (k) Shielding (guarding)
- (l) Interlocks (event sequencing)
- (m) Facilitate avoidance behavior
- (n) The protective cocoon
- (o) Compliance-plus
- (p) Universal design
- (q) System engineering
- (r) Survivability and injury reduction
 - (1) Contagion
 - (2) Anticipating the possible
- (s) Digital models and man-testing
- (t) Design by and for test

- (u) Design for manufacturing and assembly
- (v) Design for maintenance, repair, recycling, and disposal
- (w) Appropriate marketing and leasing
- (x) Recall and liability avoidance
- (y) The informed purchaser and operator
- (z) Participatory intervention

3 Risk evaluation: is it unsafe?

- (a) The basic trilogy
 - (1) Definitions
 - (2) Examples
 - (3) Hazard prevention
- (b) Decision models
 - (1) The absolute control model
 - (2) The excessive preventable risk model
 - (3) The expectations model
 - (4) The compliance model
 - (5) The comparative model
 - (6) The informed assumption model
 - (7) The shift-the-burden model
 - (8) The developmental risk model
 - (9) Design models
 - (10) Mental model of risk
- (c) Balancing risks
- (d) Combining risks
- (e) Biological risk assessments

4 Human error control

- (a) The blame game
- (b) Basic approaches for human error analysis
 - (1) The passive approach
 - (2) The behavioral approach
 - (3) The situational approach
 - (4) The product design approach
 - (5) The multifactoral approach
- (c) Illustrative errors
 - (1) Judgmental errors
 - (2) Anthropometrically induced errors
 - (3) Oversteering errors
 - (4) Braking errors
 - (5) Mismatch errors
 - (6) Language-induced errors
 - (7) Load placement errors
 - (8) Backup errors
 - (9) Drinking and gambling errors

Automotive Vehicle Safety

- (10) Blind-side errors
- (11) Rough ground errors
- (12) Risk-taking errors
- (13) Misuse and abuse
- (14) Curiosity
- (15) Aggressiveness
- (16) Awareness errors
- (17) Vibration errors
- (18) Negative transfer errors
- (19) Speed estimations
- (20) Assembly line errors
- (21) Other errors

- (d) Acceptable error
- (e) Preventive measures
 - (1) Proactive plans
 - (2) Positive perspective
 - (3) Open causation
 - (4) Empirical data
 - (5) Responsible person
 - (6) Localization
 - (7) Validation
 - (8) Consequences
 - (9) Coordination of efforts
 - (10) Conceptual caveats

5 Risk communication

- (a) Introduction
- (b) Imagery
- (c) Urgency
- (d) Magnitude of the risk
- (e) Readability
- (f) Specific examples

6 Universal design

- (a) Introduction
- (b) The theory
- (c) A reasonable standard of care
- (d) Representative users
- (e) Idiosyncratic risks
- (f) Adjustability
- (g) Injury levels
- (h) Zero tolerance
- (i) Affirmative action
- (j) Costs of universal design
- (k) Contractual compliance
- (l) Simple products
- (m) Conclusion

7 The distracted driver

- (a) Introduction
- (b) Distractors and risk reduction
- (c) Information processing
- (d) Health promotion
- (e) Future research

- (f) Conclusions

8 Occupant injury prevention: biokinetics

- (a) Introduction
- (b) Proper use of head restraints
- (c) Airbags
- (d) Problems less amenable
- (e) Conclusions

9 Human simulation applications

- (a) Introduction
- (b) Early simulation
- (c) Benefits and limitations
 - (1) Inappropriate validation
 - (2) The no-test approach
 - (3) Late testing
 - (4) Human predictability
 - (5) Sign-off assurance
 - (6) Controlled incremental simulator research
- (d) Consequences
 - (1) Inadequate validation
 - (2) How much validation?
 - (3) Human size problems
 - (4) Billion dollar incentives
 - (5) Simulation to shorten design time
- (e) The only reasonable test
 - (1) EMC and health effects
 - (2) The debugging process
 - (3) Tuning for the system
 - (4) Informed consent
 - (5) Military simulation
 - (6) The many forms of simulation
- (f) Intentional bias
 - (1) The gold-plated component
 - (2) Liability defense
- (g) Six caveats
- (h) Definitions
 - (1) Verification
 - (2) Validation
 - (3) Sensitivity
 - (4) Relevancy
 - (5) Simulation - legal
- (i) Workplace applications
- (j) Conclusions
- (k) Relevant terminology
 - (1) Snubber (component simulation)
 - (2) Impact sled (component simulation)
 - (3) Static and dynamic tests (component simulation)
 - (4) Barrier tests (impact crash simulation)
 - (5) Test track (vehicle system simulation)
 - (6) Human digital modeling (human simulation)

Automotive Vehicle Safety

10 Crash testing

- (a) Human testing
 - (1) Introduction
 - (2) Volunteer testing
 - (3) Cadaver testing
 - (4) Dummies
- (b) Crashworthiness
 - (1) Deceleration curves
 - (2) The square wave
 - (3) Injury tolerance
 - (4) Control of deceleration
 - (5) Pole testing
 - (6) Rear testing
 - (7) Side impact testing
 - (8) Rollover testing
 - (9) Other vehicle tests
- (c) Compliance testing
- (d) Component testing
- (e) Competitive race testing
- (f) Proving-ground testing
- (g) In-field testing

11 Accident reconstruction

- (a) Introduction and objectives
- (b) The initial investigation
 - (1) Photographic documentation
 - (2) Measurements and diagrams
 - (3) Traffic collision (police) reports
- (c) The search-and-marshall effort
- (d) Analysis and reconstruction
 - (1) Vehicle crush
 - (2) The crash-event sequence
 - (3) Black-box data
 - (4) Momentum and energy
 - (5) Injury classifications
 - (6) Basic terminology
 - (7) General terminology
- (e) Reports and graphics
- (f) The follow-on
 - (1) Isolation
 - (2) Forget and repeat
 - (3) Not proven
 - (4) Reputation
 - (5) Previously overruled

12 Special design problems

- (a) Age restrictions
 - (1) Motorcycles
 - (2) Replicas
 - (3) Other vehicles
 - (4) Boards
 - (5) NEVs

- (b) Entrapment
- (c) Ladders, steps, and platforms
- (d) Batteries
- (e) Highway safety
- (f) The bulletproof office-on-wheels
- (g) Pedestrians

13 Future vehicle safety

- (a) Introduction
- (b) Misuse
- (c) Out-of-position occupants
- (d) Human interaction
- (e) Distractions
- (f) Compensatory actions
- (g) Universal design
- (h) The precautionary principle
- (i) Needed research
- (j) The dealer's choice
- (k) Dealer restrictions
- (l) Local issues
- (m) Advanced features in future vehicles
 - (1) Styling and aerodynamics
 - (2) Four-wheel steering
 - (3) Display integration
 - (4) Adaptive headlights
 - (5) Global warming and emissions
 - (6) Design safety research
 - (7) Compromises
 - (8) Research on conduct
- (n) Summary

14 Discussion questions

15 References and recommended reading
