

ANALYSIS TECHNIQUES FOR RACECAR DATA ACQUISITION

JÖRGE SEGERS

List of Chapters:

Preface

Acknowledgments

Chapter 1 Introduction

- What Is This Book All About?
- What Is Data Acquisition?
- Hardware

Chapter 2 Data Analysis Software Requirements

- General Requirements for Data Acquisition Software
- Different Ways of Displaying Data
- Keeping Notes with Data Files
- Mathematical Channels
- Data Overlays
- Filtering
- Exporting Data to Other Software Packages
- Getting Organized

Chapter 3 The Basics

- Check the Car's Vital Signs
- Lap Markers and Segment Times
- Comparing Laps
- Inertial Track Mapping
- GPS and Track Mapping
- The Beginner's Data Logging Kit

Chapter 4 Straight-Line Acceleration

- Torque and Horsepower
- Traction and Longitudinal Slip
- ABS/TCS and Slip Ratios
- Time Versus Distance
- The Importance of Corner Exiting Speed
- Drag Racing Specifics

Chapter 5 Braking

- Maximizing Braking Speed
- Braking Effort
- Braking Points
- Lockup
- Brake Balance
- Pedal Travel

Chapter 6 Gearing

- Upshifting
- Downshifting
- The Gear Chart
- Total Gear Ratio Channel
- Determining Correct Gear Ratios

Chapter 7 Cornering

- The Cornering Sequence
- Traction Circle
- Effects of Speed
- Throttle Histogram
- Steering
- Attitude Velocity
- Front and Rear Lateral Acceleration

Chapter 8 Quantifying Roll Stiffness Distribution

- Front and Rear Roll Gradient
- Using Roll Gradients as a Setup Tool
- Front and Rear Roll Angle Ratio
- Using the Roll Ratio as a Setup Tool
- Suspension Troubleshooting
- Pitch Gradient

Chapter 9 Wheel Loads and Weight Transfer

- Lateral Weight Transfer
- Longitudinal Weight Transfer
- Banking and Grade Effects

Total Wheel Loads
Determining Wheel Loads with Modal Analysis
Measuring Wheel Loads with Suspension Load Cells
Tire Spring Rates
Chassis Torsion

Chapter 10 Frequencies and Shock Absorbers
Damping Analysis
Shock Speed Histogram
Introducing Frequency Analysis
Frequency Analysis Versus Time-Space Analysis
Theoretical Analysis
Suspension Optimization Using Frequency Analysis
Modal Analysis
Modal Frequency Issues
Nonlinear Considerations
Frequency Analysis from Sensor Data

Chapter 11 Aerodynamics
Aerodynamic Measurements
Air Density
Dynamic Pressure
The Coastdown Test
Measuring the Aerodynamic Downforce
Airbox Efficiency

Chapter 12 Analyzing the Driver
Improving Driver Performance
Driving Style Evaluation
Throttle Application
Braking
Shifting Gears
Cornering
Driving Line
Driving Line Analysis Using GPS
Driving Line Analysis Using Video Feed
Driver Consistency over Multiple Laps

Chapter 13 Simulation Tools
Introduction
Suspension Kinematics Simulation
Lap Time Simulation
A Simulated Example

Chapter 14 Using the Data Acquisition System for Developing a Race Strategy
Fuel Consumption
Tire Wear and Driver Consistency

Chapter 15 Introduction to Measurement
Analog-Digital Conversion: Accuracy Implications
Sensor Selection and Application
Measurement Uncertainty
Temperature Sensors
Pressure Sensors
Displacement Sensors
Acceleration Sensors
Speed Sensors
Strain Gages
Pitot Tube
Oxygen Sensors
GPS
Laser Distance Sensors

List of Symbols
