# Brake Technology Handbook

## List of Chapters:

### Symbols, Indices, and Acronyms

<table>
<thead>
<tr>
<th>1 The History of Automobile Brakes</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1 Mechanically Operated Vehicle Brakes</td>
</tr>
<tr>
<td>1.2 The Hydraulically Operated Four-Wheel Brake</td>
</tr>
<tr>
<td>1.3 Brakes with Internal Amplification</td>
</tr>
<tr>
<td>1.4 Multi-Circuit Braking Systems</td>
</tr>
<tr>
<td>1.5 From Muscle Power to Full Power Brakes</td>
</tr>
<tr>
<td>1.6 The Hydraulically Operated Disc Brake</td>
</tr>
<tr>
<td>1.7 Electronic Brake Control Systems</td>
</tr>
</tbody>
</table>

### 2 Basic Elements of the Braking Process

| 2.1 Braking as Driving Task |
| 2.2 Characteristics of the Braking Process |
| 2.3 Stopping Distance |
| 2.4 Braking Stability and Braking Force Distribution |
| 2.5 Reliability |

### 3 Automotive Engineering Requirements

| 3.1 Performance |
| 3.1.1 Braking Distance |
| 3.1.2 Stability |
| 3.1.3 Road Irregularities |
| 3.1.4 Dependence on Friction Value |
| 3.2 Vehicle Performance |
| 3.2.1 Stability |
| 3.2.2 Body Pitch |
| 3.3 Actuation/Control |
| 3.3.1 Responsiveness and Controllability |
| 3.3.2 Forces, Travels, Characteristics |
| 3.4 Package/Installation Situation |
| 3.4.1 Installation Sizes and Relations |
| 3.4.2 Masses |
| 3.5 Brake Boost Energy Supply |
| 3.6 Thermal Marginal Conditions |
| 3.7 Environmental Conditions |
| 3.8 Noises and Vibrations |
| 3.8.1 Vibrations |
| 3.8.2 Noises |
| 3.9 Crash Requirements |
| 3.10 Environmental Protection |

| 3.10.1 Brake Linings |
| 3.10.2 Corrosion Protection |
| 3.10.3 Brake Fluid |
| 3.11 Energy Recuperation |

### 4 User-Related Requirements

| 4.1 Introduction |
| 4.2 Braking Situation |
| 4.2.1 Information Reception |
| 4.2.2 Cognition (Information Processing in the Narrower Sense) |
| 4.2.3 Reaction |
| 4.2.4 Time Sequence of Information Processing in Braking Situations |
| 4.3 Braking Action |
| 4.3.1 Foot Movement |
| 4.3.2 Actuation of Brake Pedal |
| 4.4 Ergonomic Brake Design |
| 4.4.1 Geometry |
| 4.4.2 Key Features of Brake Pedal |
| 4.4.3 Alternative Concepts |
| 4.4.4 Braking Assistants |

### 5 Interaction Among the Road Surface, Tire, and Brake

| 5.1 Introduction |
| 5.2 Transmission of Forces Between the Tire and the Road Surface |
| 5.2.1 The Friction of Rubber |
| 5.2.2 Interaction Between the Tire and the Road Surface |
| 5.2.3 Buildup of Tire Forces |
| 5.2.3.1 Braking Forces/Tangential Forces |
| 5.2.3.2 Side Slip: Forces and Moments |
| 5.3 Interaction Between Tire and Brake |
| 5.3.1 Tire Models |
| 5.3.2 Dynamic Tangential Force/Slip Characteristics of a Tire During Braking |
| 5.3.3 Tangential Forces During Braking with ABS |
5.3.4 Combined Tangential and Lateral Forces, Braking When Lateral Force Is Required
5.4 Integration of the Tire into the Overall Vehicle System
5.4.1 Product Optimization of the Tire and the ABS Controller Using the Example of Winter Tires
5.4.2 The Role of Skid Marks in Accident Reconstruction
5.5 Outlook

6 Design and Simulation of Automobile Brake Systems
6.1 Principles of the Brake Dynamics
6.1.1 Lines of Equal Deceleration
6.1.2 Lines of Constant Coefficient of Friction Between the Tire and the Road Surface
6.2 Principles of the Brake Calculation
6.2.1 Pedal Unit
6.2.2 Vacuum Booster with Master Cylinder
6.2.3 Brake
   6.2.3.1 Disc Brake
   6.2.3.2 Drum Brake
6.3 Brake System Design
6.3.1 Brake-Split Configuration
   6.3.1.1 Front Axle/Rear Axle Configuration (II-Configuration)
   6.3.1.2 Diagonal Configuration (X-Configuration)
   6.3.1.3 Other Brake-Circuit Configurations (HI-, LL-, HH-Configuration)
6.3.2 Sizing Criteria for Brake Systems
   6.3.2.1 Requirements of the Brake Dynamics
   6.3.2.2 Requirements of the Actuation Unit and the Transmission Mechanism
   6.3.2.3 Thermal Sizing Criteria
6.3.3 Design of Wheel Brakes
   6.3.3.1 Brake Power
   6.3.3.2 Thermal Design
   6.3.3.3 Component Life/Wear
   6.3.3.4 Comfort
   6.3.3.5 Costs
   6.3.3.6 Weight
6.3.4 Design of Brake Control Systems
   6.3.4.1 Design Criteria for ABS Systems
   6.3.4.2 Design Criteria for the Traction Control System
   6.3.4.3 Design Criteria for the Electronic Stability Control
   6.3.4.4 Design Criteria for Electrohydraulic Brake Systems
6.4 Simulation of Brake Systems
6.4.1 Brake System Design
6.4.2 Analysis of the Brake System Components Using the Finite Elements Method
6.4.3 Simulation of Brake-System Components
6.4.4 Overall System Simulation

7 Construction and Components of Passenger Car Braking Systems
7.1 Introduction
7.1.1 The Underlying Physics
7.1.2 Braking System Types
7.1.3 Construction of Braking Systems in Passenger Cars
   7.1.3.1 Front-Rear Split
   7.1.3.2 Diagonal Split (“X Split”)
   7.1.3.3 Other Hydraulic Brake Circuit Splits
7.2 Generation of the Braking Force
    7.2.1 Disc Brakes
       7.2.1.1 Fixed Calipers
       7.2.1.2 Frame Calipers
       7.2.1.3 Fist Caliper
       7.2.1.4 FN Fist Caliper
       7.2.1.5 FNR Fist Frame Caliper
       7.2.1.6 Combined Fist Caliper
       7.2.1.7 Brake Discs
       7.2.1.8 Brake Linings
    7.2.2 Drum Brakes
       7.2.2.1 Simplex Drum Brake
       7.2.2.2 Duplex Drum Brake
       7.2.2.3 Duo-Servo Drum Brake
    7.2.3 Electric Generator
       7.2.3.1 Crankshaft Starter Alternator
7.3 Transfer and Modulation of Braking Energy
    7.3.1 Mechanical-Hydraulic Modulation of Brake Pressure
    7.3.2 Electrohydraulic Brake Pressure Modulation
    7.3.2.1 Hydraulic-Electronic Control Unit (HCU)
    7.3.2.2 Electronic Control Unit (ECU)
    7.3.2.3 Electronic Control Functions
7.3.2.4 Sensors for Electronic Brake Control Systems
7.3.3 Transmission Elements
  7.3.3.1 Brake Fluid
  7.3.3.2 Brake Tubes and Hoses
7.4 Brake Actuation
  7.4.1 Brake Booster
    7.4.1.1 Vacuum Brake Boosters
    7.4.1.2 Hydraulic Brake Boosters
  7.4.2 Tandem Master Cylinder
    7.4.2.1 Compensating Bore TMc
    7.4.2.2 Central Valve TMc
    7.4.2.3 Plunger TMc
    7.4.2.4 Reservoir
7.5 Human-Machine Interface (HMI)
  7.5.1 Service Brake HMI
  7.5.2 Parking Brake HMI
  7.5.3 Pedal Characteristics (Ergonomics)
    7.5.3.1 Adjustable Pedals
    7.5.3.2 Crash Compatibility
7.6 New and Future System Architectures
  7.6.1 Electric Hydraulic Combi Brake EHC

8 Braking Systems and Braking Performance of Commercial Vehicles and Buses
8.1 Evaluation of a Braking System
  8.1.1 Vehicle Stability When Braking
  8.1.2 Distribution of the Braking Forces to the Axles
  8.1.3 Brake Application in the Braking Force Distribution Diagram
  8.1.4 Load-Sensitive Braking Force Distribution (ALB)
    8.1.4.1 Braking Force Limiters
    8.1.4.2 Braking Force Reducers
  8.1.5 Influence of Engine Drag Torques, Inertia Masses and Braking Torques of Continuous Braking Systems
  8.1.6 Determination of Brake Factor Fluctuations and Their Influence on the Braking Force Distribution
  8.1.7 Brake Circuits and Brake Circuit Failure
8.2 Braking Systems for Medium and Heavy Commercial Vehicles
  8.2.1 Structure of a Braking System
  8.2.2 Wheel Brakes and Components
8.3 Continuous Braking Systems
  8.3.1 Engine Braking Systems
  8.3.2 Retarders

8.4 Conventional Braking- and Driving-Slip Control Systems
  8.4.1 Antilock Braking Systems (ABS)
  8.4.2 Traction Control
8.5 Electronic Braking Management (EBS)
  8.5.1 Integration of Continuous Braking Systems
  8.5.2 Vehicle Stability Control with Integrated Roll-Over Protection
  8.5.3 Optimization of the Compatibility Between Tractor Vehicle and Semitrailer/Full Trailer
  8.5.4 Braking Assistant
  8.5.5 Hill Holder
  8.5.6 Lining/Pad Wear Control
  8.5.7 Distance Monitoring
  8.5.8 Systems for Automatic Vehicle Guidance
8.6 System Integration and Electronic Networking
8.7 Concluding View on X-by-Wire Systems

9 Brakes for Commercial Vehicles
9.1 Types of Pneumatically Operated CV Brakes
  9.1.1 Drum Brakes
  9.1.2 Disc Brakes
9.2 Design and Operation of the Pneumatically Operated Floating Caliper Disc Brake
  9.2.1 Actuating System
    9.2.1.1 Service Brake
    9.2.1.2 Parking Brake and Secondary Braking System
  9.2.2 Automatic Wear-Adjusting System
  9.2.3 Adjustment Behavior
  9.2.4 Significance of the Clearance
  9.2.5 Interaction Brake/Wheel Hub
    9.2.5.1 Forces Resulting at the Brake
    9.2.5.2 Thermal Load of the Wheel Bearing
9.3 Performance and Service Life Behavior
  9.3.1 Design Data
    9.3.1.1 Durability
    9.3.1.2 Long-Term Braking Performance
9.4 Friction Elements
  9.4.1 Brake Pads
  9.4.2 Brake Disc
    9.4.2.1 Brake Disc Designs
    9.4.2.2 Brake Disc Material
9.4.2.3 Causes for Heat Cracks
9.4.2.4 Causes for Brake Vibrations
9.4.2.5 Dimensioning of the Friction Partners
9.4.2.6 The Specific Braking Performance

9.5 Development and Testing of Brake and Friction Partners

9.6 Trailer Brakes
9.6.1 Trailer-Specific Characteristics
  9.6.1.1 Wheel Brakes
  9.6.1.2 Adjustment
9.6.2 Trailer-Specific Requirements
  9.6.2.1 Trailer Homologation
  9.6.2.2 Trailer Brake Certificates
9.6.3 Trailer-Specific Brake Systems
  9.6.3.1 Brake Calculations for Vehicle Homologation
  9.6.3.2 Parking Brake Effect

9.7 Compatibility in Tractor/Trailer Units
  9.7.1 Legislation
  9.7.2 Matching of Tractor/Trailer Combinations
  9.7.3 Causes and Consequences of Inadequate Matching

10 Braking Behavior of Single-Track Vehicles

10.1 Motorcycles
  10.1.1 Riding Dynamics of Single-Track Vehicles
    10.1.1.1 Stationary Straight-Ahead Motion and Stability
    10.1.1.2 Stationary Motion in Bends
    10.1.1.3 Balance of Forces and Roll Angle
  10.1.2 Braking Behavior of Single-Track Vehicles
    10.1.2.1 Fundamental Aspects of Riding Dynamics in the Braking Process
    10.1.2.2 Brake Behavior on Slopes
    10.1.2.3 Influence of Tire-Road Friction
    10.1.2.4 Ideal and Real Distribution of Brake Forces
    10.1.2.5 Influence of Suspension Geometry
    10.1.2.6 Braking Dive Compensation
    10.1.2.7 Application of the Brakes in a Bend
  10.1.3 Typical Riding Errors While Braking
    10.1.3.1 Over-Braking
    10.1.3.2 Errors When Braking in an Emergency

10.2 Bicycles

10.1.4 Brake Systems of Single-Track Vehicles
  10.1.4.1 The Brake Caliper
  10.1.4.2 Brake Discs
  10.1.4.3 Brake Pads
  10.1.5 Configuration of the Brake System
    10.1.5.1 Transformation of Lever Force Into Deceleration
    10.1.5.2 Thermal Stability
    10.1.5.3 Brake Noise
    10.1.5.4 Long-Term Behavior of Brake Components
  10.1.6 Integral Brake Systems and Brake Control Systems
    10.1.6.1 Antilock Systems (ABS)
    10.1.6.2 ABS Components
    10.1.6.3 The ABS Braking Process
    10.1.6.4 Operating Principles
  10.1.7 Integral Brake Systems
    10.1.7.1 Combined Brake System by Honda
    10.1.7.2 Integral Brake System by BMW
  10.1.8 Brake-by-Wire

11 Overrun Braking Systems

11.1 Introduction
11.2 Construction and Function of the Braking System
  11.2.1 Components
    11.2.1.1 Overrun Coupling
    11.2.1.2 Transmission System
    11.2.1.3 Wheel Brakes
  11.2.2 Functions
    11.2.2.1 Service Brake, Forward Travel
    11.2.2.2 Automatic Reversing System, Reverse Travel
    11.2.2.3 Parking Brake
11.2.2.4 Breakaway Braking Function
11.3 Braking System Layout
   11.3.1 Brake Compatibility Calculation as per Directive 71/320/EEC
   11.3.2 Brake Force Utilization
   11.3.3 ABS Compatibility
11.4 Maintenance and Care
   11.4.1 Maintenance
   11.4.2 Readjustment
11.5 New Developments
12 Brakes of Off-Road Vehicles
   12.1 Historical Development of Brakes in Off-Road Vehicles
   12.2 Survey of National and International Legal Specifications for Brake Systems
      12.2.1 Transport Laws in the Federal Republic of Germany
      12.2.2 Guidelines of the European Community (EC)
      12.2.3 Regulations of the Economic Commission for Europe
      12.2.4 Standards of the Society of Automotive Engineers
   12.3 Technical Versions and Design
      12.3.1 Drum Brake
      12.3.2 Disc Brake
      12.3.3 Multiple-Disc Brake (Wet Brake)
         12.3.3.1 Design of a Multiple-Disc Brake
         12.3.3.2 Calculation of the Brake Torque
      12.3.3.3 Friction Characteristics
      12.3.3.4 Power Loss and Efficiency
   12.4 Brake Testing and Braking Effect
      12.4.1 Laboratory Testing
         12.4.1.1 Proof of Compliance with Legal Specifications
         12.4.1.2 Durability and Wear Testing
      12.4.2 Vehicle Testing
         12.4.2.1 Cold Performance Test (Type 0)
         12.4.2.2 Heat Fading Test
         12.4.2.3 Comparison of the Standards
   12.5 Prospects and Tendencies
      12.5.1 Interaction Between Wheel Brake and Other Brake Systems in the Vehicle (Brake Management)
      12.5.2 Environmental Protection
         Thanks to New Brake Concepts
13 Brakes for Tracked Vehicles
   13.1 Introduction
   13.2 Special Requirements for Brakes of Tracked Vehicles
   13.3 Mechanical Brakes for Tracked Vehicles
      13.3.1 Mechanical Friction Brakes
      13.3.2 Multiple Wet Plate Brakes
      13.3.3 Dry-Type Single and Multiple-Disc Brakes
   13.4 Control of Mechanical Brakes
   13.5 Approval of Tracked Vehicle Brakes
   13.6 Summary and Outlook
14 Aircraft Brakes
   14.1 General Description of an Aircraft Braking System
      14.1.1 Hydromechanical Brake Control
      14.1.2 Electronic Brake Control (Brake-by-Wire)
   14.1.3 Subsystems
      14.1.3.1 Anti-Skid System
      14.1.3.2 Auto-Braking System
      14.1.3.3 Parking Brake System
      14.1.3.4 Emergency Braking System
      14.1.3.5 Brake Cooling System
      14.1.3.6 Indicating and Monitoring System
   14.2 Design Criteria for Military and Civil Aircraft
      14.2.1 Qualification Directions
         14.2.1.1 Civil Aviation Requirements
         14.2.1.2 Military Aviation Requirements
      14.2.2 Simulation Procedures
   14.3 Layout of a Modern BBWS System and its Components
      14.3.1 Brake Pedal Assembly
      14.3.2 Brake Control Unit (BCU)
      14.3.3 Valves
         14.3.3.1 Brake Control Valves
         14.3.3.2 Shutoff Valves
         14.3.3.3 Hydraulic Fuses
      14.3.4 System Sensors
         14.3.4.1 Thermocouples (Optional)
         14.3.4.2 Brake Torque Transducer
      14.3.4.3 Wheel Speed Sensor
      14.3.5 Wheel Brakes
14.4 Friction Materials
14.5 Cooling and Temperature Monitoring
  14.5.1 Thermal Loads
  14.5.2 Cooling Features
  14.5.3 Temperature Monitoring
14.6 Future Aspects

15 Race Car Brake Systems
15.1 Introduction
15.2 Race Car Performances
15.3 Racing Car Straight-Line Braking
15.4 Brake System
  15.4.1 Brake Caliper
  15.4.2 Master Cylinder
15.5 Brake System Cooling
15.6 Friction Materials
  15.6.1 Carbon Manufacturing Process

16 Brake Systems of Rail Vehicles
16.1 Introduction
16.2 Requirements on Rail Vehicle Brakes
  16.2.1 High-Speed Trains
  16.2.2 Locomotives
  16.2.3 Passenger Carriages
  16.2.4 Goods Wagons
  16.2.5 Multiple Units
  16.2.6 Metros
16.3 Brake Operation and Safety Requirements
  16.3.1 Basic Safety Requirements
  16.3.2 Requirements for Signaling
  16.3.3 Requirements for Maintenance and Service Life
  16.3.4 Requirements for AAR Railways
16.4 Authorization and Regulations
  16.4.1 UIC Leaflets
  16.4.2 EU Directives and TSI
  16.4.3 European Standards
  16.4.4 Approval Authorities
  16.4.5 Operator-Specific Standards and Guidelines
16.5 Engineering of Rail Vehicle Brakes
  16.5.1 Adhesion of Wheel/Rail-Contact
  16.5.2 Performance
  16.5.3 BrakeWeight
16.6 Brake Systems
  16.6.1 Types of Brake Application
  16.6.2 Indirect Pneumatic Brake
    16.6.2.1 Brake Positions
    16.6.2.2 Load-Controlled Braking
    16.6.2.3 Direct Pneumatic Brake
  16.6.3 Direct Electropneumatic Brake
  16.6.4 Brake Management
  16.6.4.1 Retarder
  16.6.4.2 ED Brake
  16.6.4.3 Interaction of Brake Systems
16.7 Components and Subsystems
  16.7.1 Air Supply
  16.7.2 Air Stopcocks and Brake Pipe Couplings
  16.7.3 Distributor Valves
  16.7.4 Driver’s Brake Valve
  16.7.5 Brake Module
  16.7.6 Mechatronic Module
  16.7.7 Wheel Slip Prevention
  16.7.8 Tread Brakes
  16.7.9 Disc Brakes
  16.7.10 Parking Brake
  16.7.11 Magnetic Track Brake
  16.7.12 Eddy Current Brake
16.8 Hydraulic Brake Systems in Trams
  16.8.1 Rules and Regulations for Tram Brakes
  16.8.2 Vehicle Structure
  16.8.3 Brake Systems
    16.8.3.1 Magnetic Track Brake
    16.8.3.2 Electrodynamic Brake
    16.8.3.3 Electrohydraulic Brake
  16.8.4 Brake Matrix
  16.8.5 Schematic Tram Brake System
  16.8.6 Main Components of a Hydraulic Brake System
    16.8.6.1 Brake Force Actuator, Brake Disc, Brake Pad
    16.8.6.2 Electrohydraulic Supply and Control Units
  16.8.6.3 Brake Control Electronics

17 Mechatronic Systems: A Short Introduction
17.1 From Mechanical to Mechatronic Systems
17.2 Mechanical Systems and Mechatronic Developments
17.3 Functions of Mechatronic Systems
  17.3.1 Basic Mechanical Design
  17.3.2 Distribution of Mechanical and Electronic Functions
  17.3.3 Operating Properties
  17.3.4 New Functions
  17.3.5 Other Developments
17.4 Integration Forms of Processes and Electronics
17.5 Design Procedures for Mechatronic Systems
17.6 Computer-Aided Design of Mechatronic Systems

18 Basics of Electrically Actuated Braking Systems for Passenger Cars
18.1 Introduction
18.2 Definition of Brake-by-Wire
18.3 Structure of Electrically Actuated Braking Systems
18.4 Design of the Actuation Device
18.4.1 Control Element
18.4.2 Basic Attributes
18.4.3 Information Feedback
18.5 Electrohydraulic Braking Systems
18.5.1 EHB Systems with Pressure Modulator and Pressure Accumulator
18.5.2 EHB Systems with Electrohydraulic Converter
18.6 Electromechanical Braking System
18.6.1 Electrically Actuated Vehicle Brake
18.6.1.1 Components
18.6.1.2 Modes of Operation: Interaction of the Components
18.6.2 Energy Demand
18.6.3 Operation of Electrically Actuated Wheel Brakes
18.6.4 Braking System Design
18.6.5 Fail safe Concept
18.7 Mechatronic Interventions in the Self-Reinforcement of the Brake
18.7.1 Active Guidance of the Brake Pad
18.7.2 Active Intervention in the Brake Factor Mechanism
18.8 Comparisons of the Concepts
18.9 Hybrid Electric Brake Systems
18.10 Perspectives

19 Electrohydraulically Actuated Brakes
19.1 Conflicts of Goals and Limitations of Conventional Brake Systems
19.2 Comparison of Operating Principles of Various Brake Systems
19.3 Characteristics of Electrohydraulically Actuated Brake Systems
19.4 System and Component Description
19.4.1 Actuator Unit
19.4.2 Hydraulic Unit
19.4.3 Control Units and Sensors
19.5 Functional System Characteristics
19.5.1 Pedal Feel

20 The Electromechanically Actuated Brake
20.1 Objective
20.2 System Structure: Interaction of the Components
20.2.1 Actuation Unit
20.2.2 The Electromechanical Wheel Brake
20.2.2.1 Converter
20.2.2.2 Gearing Systems
20.2.2.3 Sensors
20.2.3 Control Concepts
20.2.4 Power Supply
20.2.5 Passive Safety Aspects
20.3 Electric Parking Brake (EPB) and Active Parking Brake (APB)
20.4 Electric Hydraulic Combi (EHC) Brake
20.5 Utilization of Self-Energizing Brakes
20.6 Electrically Actuated Wheel Brake
20.6.1 Summary
20.6.2 History
20.6.3 Principles
20.6.4 Embodiments
20.6.5 Control Theory
20.6.6 Selected Measurement Results
20.6.6.1 General Test Profile
20.6.6.2 Response Dynamics
20.6.6.3 Sinusoidal Excitation
20.6.7 Outlook

21 The Brake System in Driver Assistance Systems
21.1 Overview, Function, and Requirements of Driver Assistance Systems for Cars
21.1.1 Antilock Brake System (ABS)
21.1.2 Traction Control System (TCS)
21.1.3 Electronic Stability Control (ESC)
21.1.3.1 Vehicle Dynamics Controller
21.1.3.2 Brake Slip Controller
21.1.3.3 Drive Slip Controller
21.1.4 Electronic Brake Force Distribution (EBV)
21.1.5 Electronically Controlled Deceleration (ECD)
21.1.6 Hill Descent Control (HDC)
21.1.7 Brake Assistant (BA)
21.1.8 Active Trailer Stabilization
21.2 Function of the Brake System in Driver Assistance Systems
21.3 Requirements of the Brake System for Driver Assistance Systems
21.4 Brake System Designs for Driver Assistance Systems
21.5 Monitoring the Brake System for Driver Assistance Systems
21.6 Outlook and Perspective

22 The Brake in the Mechatronic Chassis
22.1 Introduction
22.2 Chassis Mechanics
  22.2.1 Function Structure and Suspension Interfaces
  22.2.2 Interaction Between Brakes and Suspension
  22.2.3 Representation of Chassis Parameters
22.3 Limitations of Passive Chassis Systems
  22.3.1 Constraints of Conventional Hydraulically Actuated Wheel Brakes
  22.3.2 Dynamics
  22.3.3 Braking Comfort
  22.3.4 Conflict of Objectives Between Handling and Ride
22.4 Solution Potential Using Mechatronics
  22.4.1 Opportunities Through Mechatronics
  22.4.2 Mechatronics in the Brake System
  22.4.3 Mechatronics in the Suspension
  22.4.4 Interaction Between Steering System and Brake
  22.4.5 Interaction Between Tires and Brakes
22.5 Outlook

23 Friction Linings
23.1 Introduction
23.2 Friction Lining Requirements
23.3 Material Concepts
  23.3.1 Semimetallic Friction Linings
  23.3.2 Low Steel Friction Materials
  23.3.3 Non-Asbestos Organic Friction Linings
  23.3.4 Nonmetallic Linings
  23.3.5 Hybrid Linings
  23.3.6 Friction Linings for Ceramic Discs
  23.3.7 Underlayer
23.4 Ecology
23.5 Raw Materials and Their Characteristics in Friction Linings
23.6 Test Methods for Raw Materials
  23.6.1 Analytical Equipment Test Methods
23.7 Manufacturing Procedures
23.8 Outlook

24 Function Mechanism and Properties of Friction Couplings in Brake Processes
24.1 Introduction
24.2 Test Devices, Characteristic Load Values, and Assessment Criteria
  24.2.1 Test Methods, Testing Opportunities, and Measurement Systems
  24.2.2 Characteristic Parameters of Load
  24.2.3 Criteria for Assessment of Friction and Wear Properties
  24.2.4 Friction Surface Temperature
24.3 Running-In Process
24.4 The Function Mechanism in the Contact Surface
24.5 Local Friction Lining Wear
24.6 Local Friction Coefficients
24.7 Explanation of the Function Mechanism in the Contact Surface
24.8 Parameters that Influence Friction and Wear Properties

25 Mechanical Brakes in Stationary Industrial Plants
25.1 Introduction
25.2 Industrial Brakes
  25.2.1 Preferred Types of Mechanical Brakes
  25.2.2 The Interaction of Energy Between Drive Gear and Brake
  25.2.3 Friction and Wear Properties of the Friction Couples
  25.2.4 Dimensioning of Friction Couples for Industrial Brakes
25.3 Friction Disc Brakes

26 Vibration and Noise
26.1 Definition
26.2 Forms of Vibration and Noise
  26.2.1 Low-Frequency Vibrations and Noise
  26.2.2 High-Frequency Noises
26.3 Sources of Excitation
  26.3.1 Causes of Low-Frequency Noises and Vibrations
  26.3.2 Causes of High-Frequency Noise
26.4 Effects
  26.4.1 Vibrations
  26.4.2 Acoustic Effects
26.5 Test and Evaluation Methods
  26.5.1 Simulation
  26.5.2 Test Setup Investigations
  26.5.3 Road Tests
26.6 Measures to Reduce or Avoid Vibrations and Noise
  26.6.1 Measures at the Excitation Sources
  26.6.2 Measures at the Transfer System
26.6.3 Secondary Measures
26.7 Outlook and Prospects

27 Brakes with Nonmetallic Brake Discs
27.1 Introduction
   27.1.1 History
   27.1.2 Carbon Brake Discs
27.2 Material
   27.2.1 Definition, Properties, Applications
   27.2.2 Manufacture of a Carbon-Ceramic Brake Disc
      27.2.2.1 Manufacturing Process
   27.2.3 Quality Assurance
      27.2.3.1 Tests During Manufacture
      27.2.3.2 Random Sample Tests
27.3 Application
   27.3.1 Design of Ceramic Brakes
      27.3.1.1 Dimensioning of the Brake System
      27.3.1.2 Brake Disc Ring
      27.3.1.3 Brake Disc Chamber
      27.3.1.4 Brake Linings
   27.3.2 Influence of Ceramic Brakes on Vehicle Properties
      27.3.2.1 Influence on Braking Performance
      27.3.2.2 Influence on Driving Performances, Driving Properties, and Comfort
   27.3.3 Wear Behavior
      27.3.3.1 Abrasive Wear
      27.3.3.2 Cracking Due to Thermal Stresses
      27.3.3.3 Thermal Wear (Fiber Erosion)
      27.3.3.4 Wear Assessment
   27.4 Further Development of the Carbon-Ceramic Brake Disc Technology

28 Brake Fluid
28.1 Brake Fluid Types
   28.1.1 Glycol-, Glycol Ether-, and Borate Ester-Based Brake Fluids
   28.1.2 Silicone Ester-Based Brake Fluids
   28.1.3 Mineral Oil-Based Brake Fluids
28.2 National and International Standards
28.3 Brake Fluid Properties
   28.3.1 Vehicle-Specific Suitability
   28.3.2 Compatibility with Other Brake Fluids
   28.3.3 Physical Properties
28.4 Brake Fluid Handling and Storage
   28.4.1 Handling
   28.4.2 Storage
   28.4.3 Disposal

29 Brake Testing
29.1 Wheel Brake

29.1.1 Laboratory Tests
29.1.2 Dynanometer Tests
29.1.3 Road Tests

30 Safety and Reliability of Brake Systems
30.1 Brakes as Sources of Trouble
   30.1.1 Safety Considerations on Conventional Braking Devices
   30.1.2 Safety Considerations for Braking Systems Incorporating Newer Technologies
   30.1.2.1 System Reliability
   30.1.2.2 System Availability
   30.1.2.3 Requirements Pertaining to Electronic Safety Systems
30.2 Lean Testing in Automotive Industry
   30.2.1 Support in the Design and Development Phase
   30.2.2 Homologation
30.2.3 Field Experience
30.3 Developing the Basic Principles of Testing and Inspection
  30.3.1 Continuous Improvement of the Main Roadworthiness Inspection
  30.3.2 Future Homologation
31 Legislation and Testing Procedures
  31.1 Homologation Procedure in Europe and the United States
  31.2 Development Processes of Regulations in Europe and the United States
    31.2.1 Development Process for Regulations in the EU
    31.2.2 Development Process for Regulations at the UN ECE
    31.2.3 Development Process for Regulations in the United States
  31.3 European Regulations for Road Vehicles
    31.3.1 General Regulations, ECE Regulation 13, and EU Directive 71/320/EEC
    31.3.2 Performance Regulations
    31.3.3 The Distribution of Braking Forces and Compatibility Between Tractor and Trailer
    31.3.4 Regulations for ABS Systems
    31.3.5 Regulations for Complex Electronic Systems
    31.3.6 Testing Aftermarket Friction Linings
  31.4 United States Braking Regulation
    31.4.1 FMVSS 105—Hydraulic Braking Systems
    31.4.2 FMVSS 121—Pneumatic Braking Systems
    31.4.3 FMVSS 106—Brake Hose Assemblies
    31.4.4 FMVSS 116—Brake Fluids for Motor Vehicles
  31.5 Worldwide Harmonization
    31.5.1 FMVSS 135 and ECE R.13H
    31.5.2 Harmonization: A Look into the Future
32 Maintenance and Diagnosis of Brake Systems
  32.1 Influence of Standards, Regulations, and Laws in Practice
  32.2 Brake Diagnosis
    32.2.1 Noise and Vibrations
    32.2.2 Pedal Box
  32.3 Environment, Repair, and Maintenance at Fair Market Value
  32.4 Test Devices
33 Development Trends and Future Aspects
  33.1 Social and Economic Trends
  33.2 The Driver’s Task—Today and Tomorrow
  33.3 Quantum Leaps in New Technology
  33.4 Limits of Power-Assisted Systems—Potential of By-Wire Systems
  33.5 The Human-Machine Interface
  33.6 Examples of By-Wire Technologies and Assistance Systems in the Chassis Sector
    33.6.1 Throttle-by-Wire (E-Gas)
    33.6.2 Shift-by-Wire
    33.6.3 Steer-by-Wire
    33.6.4 Brake-by-Wire (EBH and EMB)
    33.6.5 Energy Management in the Car of the Future: The 42-Volt Onboard Network
  33.7 Global Chassis Control with Networked Assistance and Chassis Systems
    33.7.1 ESC II—Networking with Externally Controlled Lead Steering
    33.7.2 Electronic Air Suspension; Damper and Stabilizer Adjustment
    33.7.3 Technical and Economic Necessities
    33.7.4 APIA—The All-Encompassing Approach to Safety
    33.7.5 The Long-Term Goal of Accident Prevention
