Preface	xv
Acknowledgments	xix
Chapter 1: Introduction to Automobile Aerodynamics	1
1.1 Scope	1
1.1.1 The Role of Aerodynamics in Vehicle Design	1
1.1.2 The Character of Vehicle Aerodynamics	2
1.1.3 Related Fields	5
1.2 Historical Development of Vehicle Aerodynamics	7
1.2.1 Literature	7
1.2.2 Ahead of Its Time	9
1.2.3 Dominant Reference Number c_D	10
1.2.4 Creating Shapes for Cars	11
1.2.5 “Borrowed” Shapes	12
1.2.6 The “Streamline” Era	14
1.2.7 Early Investigations with Parameters	25
1.3 From Horseless Carriage to Automobile	26
1.3.1 Stamping	26
1.3.2 “Bathtub” Body	27
1.3.3 One-Volume Bodies	30
1.4 Rear-End Shapes	34
1.4.1 Kamm-Back	34
1.4.2 Fastback	37
1.4.3 Notchback	38
1.4.4 Hatchback	39
1.5 Directional Stability	39
1.6 Commercial Vehicles	42
1.7 Motorcycles and Helmets	46
1.8 Internal Flows	47
1.8.1 Engine Compartment	47
1.8.2 Passenger Compartment	48
1.9 Development Strategies	49
1.9.1 Detail Optimization	49
1.9.2 Shape Optimization	53
1.9.3 Limit Strategy	57
1.10 Design and Aerodynamics	60
1.11 Development Tools	63
1.11.1 Wind Tunnels	63
1.11.2 Rating	65

1.11.3	Classical Approach	68
1.11.4	CFD—Integrated Methods.	70
Chapter 2: The Physical Principles of Aerodynamics		75
2.1	Basic Equations in Fluid Dynamics	75
2.1.1	Conservation Laws	75
2.1.2	Kinematics and Dynamics of Flow Fields	76
2.1.3	The Continuity Equation	81
2.1.4	The Euler Equation	82
2.1.5	The Bernoulli Equation.	83
2.1.6	Potential Theory	84
2.1.7	The Navier-Stokes Equation	85
2.1.8	Integral Forms of the Conservation Laws	88
2.2	Dynamics of Inviscid Flow	93
2.2.1	Interpreting Streamline Patterns.	93
2.2.2	Planar Model Flows	95
2.2.3	Vortex Flows.	105
2.3	The Dynamics of the Frictional Flow	111
2.3.1	The Reynolds Number	111
2.3.2	The Prandtl Boundary Layer Concept	112
2.3.3	Boundary Layer Separation.	115
2.3.4	Boundary Layer Turbulence	118
2.3.5	Drag of Simple Bodies	123
2.3.6	Multi-Body Systems	131
2.3.7	Pipe Systems with Internal Flow	134
2.4	Appendix	146
2.4.1	Density and Viscosity of Air	146
2.4.2	Compressibility Effects.	148
Chapter 3: Consumption and Performance		151
3.1	The Significance of Aerodynamic Drag.	151
3.2	Theory of Driving Resistance	154
3.2.1	Rolling Resistance	154
3.2.2	Aerodynamic Drag	156
3.2.3	Grade Resistance.	158
3.2.4	Acceleration	158
3.2.5	Overall Driving Resistance	159
3.2.6	Example	159
3.3	Performance.	160
3.3.1	Acceleration and Elasticity.	160
3.3.2	Ascending Ability	162
3.3.3	Top Speed	163
3.4	Consumption.	165
3.4.1	Calculating Fuel Consumption	166

3.4.2	Consumption Measurement and CO ₂ and Energy Equivalents . . .	168
3.5	Driving Cycles	170
3.5.1	History	171
3.5.2	New European Driving Cycle (NEDC)	171
3.5.3	NEDC Cycle for Hybrid Drives	173
3.5.4	United States Cycles	173
3.5.5	Asian Cycles	175
3.5.6	WLTP—Worldwide Harmonized Light Vehicles Test Procedure	176
3.5.7	Realistic Driving Cycles	177
3.6	Possibilities for Reducing Fuel Consumption	177
3.6.1	Energy Flow Diagram	177
3.6.2	Engine Efficiency and Engine Maps	179
3.6.3	Ancillary Components	181
3.6.4	Transmission	183
3.6.5	Vehicle Mass	185
3.6.6	Rolling Resistance	186
3.6.7	Aerodynamic Drag	186
3.7	Reducing Aerodynamic Drag	187
3.7.1	Possibilities for Reducing Resistance	188
3.7.2	Weight Equivalency	189
3.7.3	Amortization Analysis	189
3.8	CO ₂ Legislation and Labels	191
3.8.1	EU Legislation	191
3.8.2	CO ₂ Labels in the EU	192
3.8.3	Legislation in the United States	193
3.8.4	CO ₂ Labels in the United States	194
3.8.5	Legislation in Asia	196

Chapter 4: Aerodynamic Forces and Their Influence on Passenger Vehicles 197

4.1	Aerodynamic Forces and Force Coefficients	201
4.1.1	Buckingham Π Theorem	205
4.2	Flow Field Around Cars	206
4.2.1	Dead Wake	208
4.2.2	Longitudinal Vortices	215
4.2.3	Internal Flow	216
4.2.4	Environmental Influences	217
4.2.5	Influence of the Reynolds Number	219
4.3	Analysis of Aerodynamic Drag Components	220
4.3.1	Pressure and Friction Drag	220
4.3.2	Microdrag	223
4.3.3	Analysis by Individual Components	226

4.4	Other Components of Aerodynamic Force and Aerodynamic Moment	246
4.4.1	Lift and Pitching Moment	246
4.4.2	Side Force and Yaw Moment	248
4.4.3	Roll Moment	250
4.5	Influence on Aerodynamic Forces	250
4.5.1	The Influence of Basic Shape	252
4.5.2	Cooling Air Effect	320
4.5.3	Add-On Parts	334
4.5.4	Interference	367
4.6	The Aerodynamic Development Process	380
4.6.1	Goal Definition	382
4.6.2	Project Milestones and Tools	383
4.6.3	Examples	388
4.7	Drag and Lift of Passenger Cars in Production	390
4.7.1	Overview of Competitors by Vehicle Class	390
4.7.2	Drag Surface Area $c_D \cdot A_x$	392
4.7.3	Intercomparison in Accordance with EADE	394
4.7.4	Influence of Vehicle Concepts	396
4.7.5	Influence of Equipment and Engine	400
4.7.6	Driving on the Ceiling?	402
4.8	Future Development	403
4.9	Reference Bodies	406
4.9.1	SAE Reference Body	406
4.9.2	Ahmed Body	409
4.9.3	DrivAer Body	410
Chapter 5: Aerodynamics and Driving Stability		413
5.1	Unsteady Aerodynamic Forces and Moments	414
5.1.1	Overtaking Maneuvers	414
5.1.2	Side Wind	416
5.2	Dynamic Driving Effects	445
5.2.1	Single-Track Model	445
5.2.2	Reaction to Lift Forces	449
5.2.3	Aerodynamic Axle Load Relief Settings	459
5.2.4	Reaction to Crosswinds	461
Chapter 6: Functionality, Safety, and Comfort		473
6.1	Component Loads	474
6.1.1	Component Loads and Pinpointing Them	474
6.1.2	Doors, Flaps, and Outside Mirrors	476
6.1.3	Windshield Wipers	480
6.2	Comfort When Driving with the Top Down	487
6.2.1	Objective	487

6.2.2	Airflow with Convertible Top Open	488
6.2.3	Wind Noise.....	489
6.2.4	Thermal Comfort.....	489
6.2.5	Design Solutions for Convertibles	496
6.2.6	Design Solutions for Sunroofs.....	501
6.3	Prevention of Vehicle Soiling	503
6.3.1	Basics of Vehicle Soiling.....	503
6.3.2	External Contamination.....	508
6.3.3	Vehicle-Induced Contamination.....	523
Chapter 7: Cooling and Internal Flow.....		527
7.1	Cooling Requirements	527
7.1.1	Representative Operating Conditions	528
7.1.2	Components and Systems	529
7.1.3	Other Requirements	531
7.2	Cooling System	532
7.2.1	Engine Cooling System Circuit.....	532
7.2.2	Fundamentals of Heat Transfer.....	533
7.2.3	Design of Heat Exchanger	535
7.2.4	Heat Exchangers in the Vehicle.....	537
7.3	Internal Flow	541
7.3.1	Operating Conditions.....	541
7.3.2	Cooling Module.....	544
7.3.3	Fan.....	545
7.4	Optimizing the Overall System	547
7.4.1	Calculation of the Cooling Air Mass Flow	548
7.4.2	Influence Parameters of the Internal Flow	551
7.4.3	Air Intakes and Cooling Air Ducts	553
7.4.4	Cooling Matrix.....	554
7.4.5	Fan.....	559
7.4.6	Engine Compartment	561
7.4.7	Cooling Air Outlets.....	562
7.5	Measurement Technology for Cooling Airflow	563
7.5.1	Vane Anemometers.....	564
7.5.2	Pressure Measurements	564
7.5.3	Optical Measuring Methods	565
7.5.4	Hot-Wire Anemometry.....	566
Chapter 8: Aeroacoustics.....		569
8.1	The Influence of Airflow on the Interior and Exterior Noise of Motor Vehicles.....	569
8.2	Aerodynamic Noise Generation.....	573
8.3	Aeroacoustic Measuring Systems.....	574
8.3.1	Aeroacoustic Wind Tunnels.....	574

8.3.2	Measuring Interior Noise	576
8.3.3	Measuring Exterior Noise	576
8.3.4	Measuring Structure-Borne Sound	581
8.3.5	Sound Source Location with Special Instruments	582
8.4	Main Noise Sources and Options for Their Reduction	583
8.4.1	Leaks	583
8.4.2	Rear View Mirrors	584
8.4.3	Windshield Wipers	586
8.4.4	Antennas	586
8.4.5	A-Pillar	587
8.4.6	Cavity Resonances	589
8.4.7	Sun Roof Opening Noise	591
8.4.8	Wheel Housings	591
8.4.9	Underbody	592
8.4.10	Reduction of Interior Noise by Using Special Acoustic Glass Windows	593
8.4.11	Convertibles	593
8.5	Psycho-Acoustic Aspects	594
8.5.1	Assessing Different Behavior Under Yaw Conditions	596
8.5.2	Simulation with Static Vortex Generators	597
8.5.3	Simulation with Dynamic Vortex Generators	597
8.5.4	Noise Synthesis	597

Chapter 9: High-Performance Vehicles 601

9.1	Introduction	601
9.1.1	Definition	601
9.1.2	Preview	602
9.2	Outline of the History	602
9.2.1	Racing Cars	602
9.2.2	Record-Breaking Vehicles	609
9.2.3	Sports Cars	618
9.3	Vehicle Classes	623
9.4	Race Tracks	629
9.5	Regulations	631
9.6	Aerodynamics, Performance, and Handling Characteristics	635
9.6.1	Drag	635
9.6.2	Downforce	639
9.6.3	Balance	643
9.6.4	Road Performance	649
9.6.5	Efficiency	651
9.6.6	Cooling and Ventilation	654
9.6.7	Oblique Incident Flow	656
9.6.8	Slipstream	659

9.7	Aerodynamics of Components	661
9.7.1	Basic Body	662
9.7.2	Wings	666
9.7.3	Spoiler and Gurneys	677
9.7.4	Ground Effect	682
9.7.5	Diffusers	686
9.7.6	Inlets and Outlets	696
9.7.7	Air Guiding Elements (Vaness)	703
9.7.8	Wheels	707
Chapter 10: Commercial Vehicles		711
10.1	Target Group	711
10.2	Driving Resistances and Fuel Consumption	713
10.3	History of Commercial Vehicle Aerodynamics	718
10.4	Principles of Commercial Vehicle Aerodynamics	721
10.4.1	Straight/Oblique Flow	723
10.4.2	Legislative Framework	727
10.5	Tools for Optimizing Commercial Vehicle Aerodynamics	728
10.5.1	Challenges Posed by Commercial Vehicles	728
10.5.2	Model-Scale Wind Tunnel	728
10.5.3	Full-Scale Wind Tunnel	732
10.5.4	CFD Simulation	735
10.5.5	Test Drives with Wheel Hub Measurement Device	736
10.6	Optimizing Aerodynamic Drag on Trucks	739
10.6.1	Characteristic Airflow and Pressure Conditions	739
10.6.2	Cab	741
10.6.3	Mirrors and Attachments on the Cab	748
10.6.4	Airflow Through the Engine Compartment	751
10.6.5	Chassis	754
10.6.6	Semitrailers and Bodies	758
10.6.7	Concept Vehicles	769
10.7	Optimizing Aerodynamic Drag on Buses and Coaches	772
10.7.1	Characteristic Airflow and Pressure Conditions	772
10.7.2	Front	773
10.7.3	Rear View Mirrors	775
10.7.4	Windscreen Wipers	777
10.7.5	Underbody	778
10.7.6	Wheels and Wheel Covers	778
10.7.7	Airflow Through the Engine Compartment	780
10.7.8	Rear	781
10.8	Aerodynamic Interaction	782
10.8.1	Nose-to-Tail Driving	782
10.8.2	Tipping and Susceptibility to Side Winds	784
10.8.3	Aerodynamic Loads on Components	786

10.8.4	Dust Turbulence	786
10.8.5	Intake of Warm Air	787
10.8.6	Management of Exhaust Gas	788
10.9	Vehicle Soiling	789
10.9.1	Task Description and Testing Methods	789
10.9.2	Foreign Soiling	791
10.9.3	Self-Soiling	792

Chapter 11: Motorcycle Aerodynamics **795**

11.1	Introduction	795
11.2	Historical Review and Current Types	796
11.2.1	History of Motorcycle Aerodynamics	796
11.2.2	Current Motorcycle Categories	801
11.2.3	Special Bikes	807
11.3	Aerodynamic Tasks	811
11.3.1	Aerodynamic Forces and Moments	811
11.3.2	Aerodynamics and Longitudinal Dynamics	813
11.3.3	Aerodynamics and Lateral Dynamics	821
11.3.4	Cooling and Internal Flow	831
11.3.5	Wind and Weather Protection	835
11.3.6	Aeroacoustics	837
11.4	Development Methods	838
11.4.1	Development Process	838
11.4.2	Simulation (CFD)	839
11.4.3	Wind Tunnel	853
11.4.4	Road Test	864
11.4.5	Outlook—The Future of Development Methods	868
11.5	Aerodynamic Design—Practical Examples	869
11.5.1	Measures to Optimize Drag and Lift	869
11.5.2	Design of Internal Flows, Cooling, and Heat Protection	872
11.5.3	Measures for Wind and Weather Protection	875
11.6	Outlook	876

Chapter 12: Helmets **877**

12.1	Head Protection Technology	877
12.2	Motorcycle Helmets	879
12.2.1	Aerodynamics	879
12.2.2	Aeroacoustics	887
12.2.3	Ventilation and Rain Tests	896
12.3	Helmets for Open Race Cars	901
12.3.1	History	901
12.3.2	Aerodynamics and Ventilation	901
12.3.3	Acoustics	903

12.4	Measurement and Simulation Technology	906
12.4.1	Introduction	906
12.4.2	Wind Tunnel.	906
12.4.3	Aerodynamic Forces	907
12.4.4	Aeroacoustic and Artificial-Head-Measurement Technology	909
12.4.5	Computational Fluid Dynamics (CFD)	909
Chapter 13: Wind Tunnels and Measurement Technique		913
13.1	Scope of Wind Tunnels.	913
13.2	Wind Tunnel Physics	916
13.2.1	Design and Function of Wind Tunnels.	916
13.2.2	Wind Tunnel Nozzle	920
13.2.3	The Test Section	926
13.2.4	The Collector	934
13.2.5	Plenum	937
13.2.6	Diffusers	940
13.2.7	Turning Vanes	941
13.2.8	Flow Conditioning Screens	941
13.2.9	Honeycombs	942
13.2.10	Acoustic and Anti-Buffering Measures	942
13.2.11	Ground Simulation	955
13.2.12	Unsteady Flow and Gust Simulation	963
13.2.13	Wind Tunnel Correction Methods	967
13.3	Wind Tunnel Measurements	981
13.3.1	Test Sequence	981
13.3.2	Measurement of Flow Velocity	984
13.3.3	Pressure Measurements	990
13.3.4	Measurements of Aerodynamic Loads	997
13.3.5	Flow Visualization.	1006
13.3.6	Investigation of Vehicle Soiling.	1011
13.3.7	Engine Cooling Tests.	1014
13.3.8	Heating and Climatization Tests.	1017
13.3.9	On-Road Measurements.	1021
13.3.10	Additional Equipment in Climatic and Thermal Wind Tunnels.	1032
13.4	Model Testing—Dimensionless Numbers.	1034
13.5	Existing Wind Tunnels for Motor Vehicles	1039
13.5.1	Full-Scale Wind Tunnels.	1041
13.5.2	Model-Scale Wind Tunnels	1048
13.5.3	Climatic and Thermal Wind Tunnels	1050
13.5.4	Overview and Correlation Measurements	1054
13.6	Outlook.	1062

Chapter 14: Numerical Methods	1065
14.1 Simulation of Three-Dimensional Viscous Flows	1066
14.1.1 Requirements and Properties of CFD—Methods	1068
14.1.2 Basics of Kinetic Theory	1070
14.1.3 Lattice Methods	1072
14.1.4 Navier-Stokes Methods	1084
14.1.5 Potential Flow Methods (BEM)	1103
14.1.6 One-Dimensional Methods for Cooling Module Design . . .	1113
14.1.7 Rotating Geometries (Wheels, Fans)	1119
14.1.8 Porous Media (Heat Exchanger)	1121
14.1.9 The Solution Process	1123
14.1.10 Hardware and Benchmarking	1138
14.1.11 Integration of CFD in the Development Process	1144
14.1.12 Outlook	1146
14.2 Computational Aeroacoustics for Motor Vehicles	1148
14.2.1 Introduction	1148
14.2.2 Calculation of Aerodynamic and Aeroacoustic Sources . . .	1151
14.2.3 Sources and Exterior Sound Field	1153
14.2.4 Transfer into the Vehicle Cabin	1157
14.2.5 Examples of Applications	1161
14.2.6 Conclusion and Outlook	1172
Abbreviations	1175
Symbols	1179
Literature	1193
The Authors	1245
Index	1253
