

Contents

Note to the reader:

Bibliographic references that are included at the end of a chapter but are not marked in the text, indicate additional literature. This may serve to provide the reader with more in-depth information on the material covered in the respective chapter.

Foreword to the second English edition	v	3.2 Compression Ratio	16
Chapters, Articles, and Authors	vii	3.3 Rotational Speed and Piston Speed	17
1 Historical Review	1	3.3.1 Rotational Speed	17
<i>Bibliography</i>	8	3.3.2 Angular Velocity	17
2 Definition and Classification of Reciprocating Piston Engines	9	3.3.3 Piston Speed	17
2.1 Definitions	9	3.3.4 Mean Piston Speed	18
2.2 Potentials for Classification	10	3.3.5 Maximum Piston Speed	18
2.2.1 Combustion Processes	10	3.4 Torque and Power	18
2.2.2 Fuel	10	3.5 Fuel Consumption	19
2.2.3 Working Cycles	11	3.6 Gas Work and Mean Pressure	20
2.2.4 Mixture Generation	11	3.6.1 Indicated Mean Pressure	20
2.2.5 Gas Exchange Control	11	3.6.2 Effective Mean Pressure	21
2.2.6 Supercharging	11	3.6.3 Friction Mean Pressure	22
2.2.7 Configuration	11	3.7 Efficiency	22
2.2.8 Ignition	12	3.7.1 Indicated Efficiency	22
2.2.9 Cooling	12	3.7.2 Effective Efficiency	22
2.2.10 Load Adjustment	13	3.7.3 Mechanical Efficiency	22
2.2.11 Applications	14	3.8 Air Throughput and Cylinder Charge	23
2.2.12 Speed and Output Graduations	14	3.8.1 Air Expenditure	23
<i>Bibliography</i>	14	3.8.2 Volumetric Efficiency	23
3 Characteristics	15	3.9 Air–Fuel Ratio	24
3.1 Piston Displacement	15	<i>Bibliography</i>	25
3.1.1 Calculation of Stroke and Piston Displacement from the Crankshaft Position (Figure 3.1)	15	4 Curves	27
		4.1 Consumption Curves	28
		4.2 Emission Maps	29
		4.3 Ignition and Injection Maps	32
		4.4 Exhaust Gas Temperature Maps	33

5	Fundamentals of Thermodynamics	35	7.4	Engine Block	110
5.1	Cyclical Processes	35	7.4.1	Tasks and Functions	110
5.2	Comparative Processes	37	7.4.2	Engine Block Design	112
5.2.1	Simple Model Processes	37	7.4.3	Optimizing Acoustic Properties	116
5.2.2	Exergy Losses	39	7.4.4	Minimizing Engine Block Mass	117
5.3	Open Comparative Processes	40	7.4.5	Casting Process for Engine Blocks	118
5.3.1	Work Cycle of the Perfect Engine	40	7.5	Cylinders	119
5.3.2	Approximation of the Real Working Cycle	42	7.5.1	Cylinder Design	120
5.4	Efficiency	45	7.5.2	Machining Cylinder Running Surfaces	123
5.5	Energy Balance in the Engine	46	7.5.3	Cylinder Cooling	124
5.5.1	Balance Equation	46	7.6	Oil Pan	125
	<i>Bibliography</i>	47	7.6.1	Oil Pan Design	126
6	Crank Gears	49	7.7	Crankcase Venting	126
6.1	Crankshaft Drive	49	7.7.1	Regulatory Marginal Conditions	126
6.1.1	Design and Function	49	7.7.2	Technical Requirements	127
6.1.2	Forces Acting on the Crankshaft Drive	52	7.7.3	System Structure of Current Crankcase Venting Systems	129
6.1.3	Tangential Force Characteristic and Average Tangential Force	58	7.7.4	Oil Mist Separation	129
6.1.4	Inertial Forces	60	7.7.5	Crankcase Pressure Control	134
6.1.5	Mass Balancing	66	7.7.6	Modules and Valve Bonnet Integration	136
6.1.6	Internal Torques	70	7.8	Cylinder Head	137
6.1.7	Throw and Firing Sequences	71	7.8.1	Basic Design for the Cylinder Head	137
6.2	Rotational Oscillations	72	7.8.2	Cylinder Head Design	139
6.2.1	Fundamentals	72	7.8.3	Casting Processes	147
6.2.2	Reduction of the Machine System	73	7.8.4	Model and Mold Manufacturing	151
6.2.3	Natural Frequencies and Modes of Natural Vibration	73	7.8.5	Machining and Quality Assurance	152
6.2.4	Exciter Forces, Work, and Amplitudes	75	7.8.6	Shapes Implemented for Cylinder Heads	153
6.2.5	Measures to Reduce Crankshaft Excursions	76	7.8.7	Perspectives in Cylinder Head Technology	158
6.2.6	Two-Mass Flywheels	77	7.9	Crankshafts	159
6.3	Variability of Compression and Swept Volume	78	7.9.1	Function in the Vehicle	159
6.3.1	Variable Swept Volume	78	7.9.2	Manufacturing and Properties	160
6.3.2	Variable Compression	79	7.9.3	Lightweight Construction and Processes for Increasing Strength	162
	<i>Bibliography</i>	82	7.9.4	Calculating Crankshafts	163
7	Engine Components	83	7.10	Valve Train Components	164
7.1	Pistons/Wristpins/Wristpin Circlips	83	7.10.1	Standard Valve Train	164
7.1.1	Piston	83	7.10.2	Belt Tensioning Systems, Idler, and Deflection Pulleys	174
7.1.2	Wristpins	94	7.10.3	Chain Tensioning and Guide Systems	177
7.1.3	Wristpin Circlips	94	7.11	Valves	179
7.2	Connecting Rod	95	7.11.1	Functions and Explanation of Terms and Concepts	179
7.2.1	Connecting Rod Design	95	7.11.2	Types of Valves and Manufacturing Techniques	180
7.2.2	Loading	96	7.11.3	Embodiments	181
7.2.3	Conrod Bolts	97	7.11.4	Valve Materials	183
7.2.4	Design	97	7.11.5	Special Valve Designs	183
7.2.5	Conrod Manufacture	98	7.11.6	Valve Keepers	184
7.2.6	Conrod Materials	100	7.11.7	Valve Rotation Devices	185
7.3	Piston Rings	101	7.12	Valve Springs	186
7.3.1	Designs	102	7.12.1	Determining Strain under Load	187
7.3.2	Ring Sets	104	7.13	Valve Seat Rings	189
7.3.3	Characterizing Features	105	7.13.1	Introduction	189
7.3.4	Manufacturing	107	7.13.2	Demands Made on Valve Seat Inserts	190
7.3.5	Loading, Damage, Wear, and Friction	109	7.14	Valve Guides	196
			7.14.1	Requirements for Valve Guides	196

7.14.2 Materials and Properties	198	7.23.1 Manifold Development Process	300
7.14.3 Geometry of the Valve Guide	201	7.23.2 Manifolds as Individual Components	301
7.14.4 Installing in the Cylinder Head	202	7.23.3 The Manifold as a Submodule	303
7.15 Oil Pump	202	7.23.4 Manifold Components	304
7.15.1 Overview of Oil Pump Systems	203	7.24 Coolant Pumps for Combustion Engines	304
7.15.2 Regulating Principles	208	7.24.1 Requirements, Models, and Constructive Design	304
7.15.3 Flow Rate Regulating Pumps	211	7.24.2 Impeller and Spiral Port	306
7.15.4 Consumption Savings in NEFZ Cycle	214	7.24.3 Coolant-Side Sealing	307
7.15.5 Engineering Principles	216	7.24.4 Map and Similarity Relations of the Coolant Pump	308
7.15.6 Cavitation and Noise Emission	220	7.24.5 Cavitation	309
7.15.7 Calculation	222	7.24.6 Electric Coolant Pump and Switchable Mechanical Coolant Pump	311
7.16 Camshaft	224	7.25 Control Mechanisms for Two-Stroke Engines	312
7.16.1 Camshaft Function	225	<i>Bibliography</i>	315
7.16.2 Valve Train Configurations	225	8 Engines	321
7.16.3 Structure of a Camshaft	226	8.1 Engine Concepts	321
7.16.4 Technologies and Materials	227	8.1.1 Engine Models	323
7.16.5 Reduction of Mass	232	8.1.2 Differentiating Features of Engine Concepts Regarding the Basic Engine	325
7.16.6 Factors Influencing Camshaft Loading	233	8.1.3 Further Concept Criteria	327
7.16.7 Design of Cam Profiles	234	8.1.4 Engine Arrangement Concepts in the Vehicle	327
7.16.8 Kinematics Calculation	235	8.2 Current Engines	328
7.16.9 Dynamics Calculations	236	8.2.1 V6 Diesel Engine by Mercedes-Benz	328
7.16.10 Camshaft Shifter Systems	236	8.2.2 4-Liter V8 Diesel Engine by Mercedes-Benz	328
7.17 Chain Drive	238	8.2.3 V10 FSI engine by Audi	329
7.17.1 Chain Designs	240	8.2.4 1.6-Liter V8 Turbocharged Gasoline Engine by GM	329
7.17.2 Typical Chain Values	241	8.2.5 2-Liter 4V-TDI with Common-Rail by Volkswagen	330
7.17.3 Sprockets	241	8.2.6 6-Liter V12 TDI Engine by Audi	331
7.17.4 Chain Guide Elements	242	8.2.7 4.8-Liter V8 SI Engine by Porsche (Turbo and Naturally Aspirated Engine)	333
7.18 Belt Drives	243	8.2.8 Stratified Combustion Process for Four- and Six- Cylinder Intake Gasoline Engines by BMW	334
7.18.1 Belt Drives Used to Drive Camshafts	243	8.2.9 Four-Cylinder Diesel Engine by Mercedes-Benz	336
7.18.2 Toothed V-Belt Drive to Power Auxiliary Units	249	8.2.10 SI Engines with Direct Injection and Dual Charging by VW	337
7.19 Bearings in Combustion Engines	251	8.3 Motorcycle Engines/Special Engines	339
7.19.1 Principles	252	8.3.1 Motorcycles for the Road (On-Road)	339
7.19.2 Calculating and Dimensioning Engine Bearings	254	8.3.2 Off-Road Motorcycles	353
7.19.3 Bearing Materials	258	8.3.3 Legislation	360
7.19.4 Bearing Versions—Structure, Load-Handling Capacity, Application	262	8.3.4 Racing Engines	369
7.19.5 Bearing Failure	267	8.3.5 Special Applications	375
7.19.6 Prospects	268	8.4 Rotary Piston Engine/Wankel Engine	382
7.20 Intake Systems	268	8.4.1 History	382
7.20.1 Thermodynamics in Air Intake Systems	269	8.4.2 General Functionality of a Rotary Piston Engine	383
7.20.2 Acoustics	271	8.4.3 Four-Stroke Principle	384
7.21 Sealing Systems	275	8.4.4 The Rotary Piston Engine of the Passenger car Renesis	384
7.21.1 Cylinder Head Sealing Systems	275	8.4.5 Hydrogen Rotary Piston Engine	386
7.21.2 Special Seals	280	<i>Bibliography</i>	387
7.21.3 Elastomer Sealing Systems	284		
7.21.4 Development Methods	287		
7.22 Threaded Connectors at the Engine	291		
7.22.1 High-Strength Threaded Connectors	291		
7.22.2 Quality Requirements	291		
7.22.3 Threaded Connectors	292		
7.22.4 Threaded Connections in Magnesium Components	297		
7.22.5 Screw Tightening Process	298		
7.23 Exhaust Manifold	299		

9 Tribology	389	11.2.2 Ram Induction Turbocharging or Impulse Turbocharging.	489
9.1 Friction.	389	11.3 Intercooling	490
9.1.1 Characterizing Features	389	11.4 Interaction Between Engine and Compressor	491
9.1.2 Friction States.	389	11.4.1 Four-Stroke Engine in Compressor Map	491
9.1.3 Methods of Measuring Friction.	390	11.4.2 Mechanical Supercharging.	492
9.1.4 Influence of the Operating State and the Boundary Conditions	391	11.4.3 Exhaust Gas Turbocharging.	493
9.1.5 Influence of Friction on the Fuel Consumption. .	393	11.5 Dynamic Behavior	498
9.1.6 Friction Behavior of Previously Introduced Combustion Engines	394	11.5.1 Improvement Measures	500
9.1.7 Method of Calculating the Friction on the Example of the Piston Group	403	11.5.2 Active Residual Gas Discharge	500
9.2 Lubrication	404	11.5.3 Electric Support for Exhaust Gas Turbocharging.	500
9.2.1 Tribological Principles	404	11.5.4 Mechanical Auxiliary Compressor	501
9.2.2 Lubrication System	406	11.6 Additional Measures for Supercharged Internal Combustion Engines	501
<i>Bibliography</i>	412	11.6.1 SI Engines	501
10 Charge Cycle	415	11.6.2 Diesel Engines	502
10.1 Gas Exchange Devices in Four-Stroke Engines	416	11.7 Performance Explosion by Register and Two-Stage Supercharging for Private Vehicles	502
10.1.1 Valve Gear Designs	416	11.7.1 The History and Evolution of Two-Stage Turbocharger Processes	502
10.1.2 Components of the Valve Train.	418	11.7.2 Thermodynamics of Two-Stage Superchargers	503
10.1.3 Kinematics and Dynamics of the Valve Train. .	423	11.7.3 Sequential Turbocharger and Two-Stage Supercharger Concept/Supercharger Systems	505
10.1.4 Design of Gas Exchange Devices in Four-Stroke Engines.	425	11.7.4 Applications Areas	507
10.2 Calculating Charge Cycle	436	11.8 Ascertaining Turbocharger Characteristic Maps on Turbocharger Test Rigs	507
10.2.1 The Filling and Emptying Method	437	11.8.1 Basic Design of a Turbocharger Test Rig	508
10.3 The Charge Cycle in Two-Stroke Engines	439	11.8.2 Compressor and Turbine Maps.	508
10.3.1 Scavenging	439	11.8.3 Special Features When Using Turbocharger Engine Maps in the Engine Process Simulation	511
10.3.2 Gas Exchange Organs.	441	<i>Bibliography</i>	512
10.3.3 Scavenging Air Supply.	443	12 Mixture Formation and Related Systems	515
10.4 Variable Valve Actuation.	444	12.1 Internal Mixture Formation	515
10.4.1 Camshaft Timing Devices	446	12.2 External Mixture Formation.	515
10.4.2 Systems With Stepped Variation of the Valve Stroke or Opening Time	453	12.3 Mixture Formation in Gasoline Engines (Carburetor/Gasoline Injection)	516
10.4.3 Infinitely Variable Valve Actuation.	456	12.3.1 Mode of Operation of the Carburetor	516
10.4.4 Perspectives for the Variable Valve Train	469	12.3.2 Designs	517
10.5 Pulse Turbocharging and Load Control of Reciprocating Piston Engines Using an Air Stroke Valve	471	12.3.3 Important Systems on Carburetors	518
10.5.1 Introduction	471	12.3.4 Electronically Controlled Carburetors	521
10.5.2 Technology Description	471	12.3.5 Constant Vacuum Carburetor	522
10.5.3 Construction Principle and Boundary Conditions	472	12.3.6 Operating Behavior.	522
10.5.4 Thermodynamic Potential	472	12.3.7 Lambda Closed-Loop Control.	523
10.5.5 Evaluation Summary	478	12.3.8 Mixture Formation by Utilizing Gasoline Injection.	523
10.5.6 Pulse Turbocharging With Controllable Aspiration Valves.	479	12.4 Mixture Formation in Diesel Engines	532
<i>Bibliography</i>	483	12.4.1 Injection Systems—An Overview.	534
11 Supercharging of Internal Combustion Engines	487	12.4.2 Systems with Injection-Synchronous Pressure Generation.	537
11.1 Mechanical Supercharging	488	12.4.3 Systems with a Central Pressure Reservoir. .	545
11.2 Exhaust Gas Turbocharging	489		
11.2.1 Constant Pressure Turbocharging.	489		

12.4.4 Injection Nozzles and Nozzle-Holder Assemblies	551	15.2.1 Combustion Processes in Port Fuel Injection Engines	623
12.4.5 Adapting the Injection System to the Engine	555	15.2.2 Combustion Process of Direct Injection Spark Ignition Engines	633
12.5 Fuel Supply Systems	557	15.3 Combustion Process (Two-Stroke Engine)	649
12.5.1 Fuel Tanks	557	15.4 Two-Stroke SI Engines	650
12.5.2 The Tank Venting System	560	<i>Bibliography</i>	653
12.5.3 Requirements for the Fuel Supply System	560		
12.5.4 The Filling-Level Measuring	566		
<i>Bibliography</i>	567		
13 Ignition	569	16 Electronics and Mechanics for Engine and Shift Control Transmission Management	657
13.1 Gasoline Engines	569	16.1 Environmental Requirements	657
13.1.1 Introduction to Ignition	569	16.1.1 Classes of Installation	657
13.1.2 Requirements for the Ignition Systems	569	16.1.2 Thermal Management	658
13.1.3 Minimum Ignition Energy	569	16.2 Stand-Alone Products	661
13.1.4 Fundamentals of Spark Ignition	569	16.3 Connection Systems	663
13.1.5 Coil Ignition System (Inductive)	570	16.4 Integrated Products (MTM)	664
13.1.6 Other Ignition Systems	572	16.5 Electronic Design, Structures, and Components	665
13.1.7 Summary/Outlook	573	16.5.1 Basic Structure	665
13.1.8 Spark Plug	573	16.5.2 Electronic Components	666
13.2 Diesel Engine	578	16.6 Electronics in the Electronic Control Unit	672
13.2.1 Autoignition and Combustion	578	16.6.1 General Description	672
13.2.2 Cold Start Diesel Engine	579	16.6.2 Signal Processing	672
13.2.2.1 Important Influence Parameters	579	16.6.3 Signal Evaluation	672
13.2.3 Components for Supporting Cold Starts	581	16.6.4 Signal Output	672
13.2.4 Outlook	585	16.6.5 Power Supply	673
<i>Bibliography</i>	586	16.6.6 Interfaces	673
		16.6.7 Electronics for Transmission ECUs	674
14 Combustion	589	16.7 Software Structures	676
14.1 Fuels and Fuel Chemistry	589	16.7.1 Task of the Software in Controlling Engines	676
14.2 Oxidation of Hydrocarbons	591	16.7.2 Demands on the Software	676
14.3 Autoignition	592	16.7.3 The Layer Approach to Software	677
14.3.1 The H ₂ -O ₂ System	593	16.7.4 The Software Development Process	678
14.3.2 Ignition of Hydrocarbons	593	16.8 Torque-Based Functional Structure for Engine Management	678
14.3.3 Rapid Compression Machines	594	16.8.1 Model-Based Functions Using the Example of the Intake Manifold Model	681
14.3.4 Diesel Engine	594	16.9 Functions	683
14.3.5 HCCI Engine	594	16.9.1 λ Regulation	683
14.3.6 Engine Knock	595	16.9.2 Anti-Jerk Function	685
14.3.7 Modeling the Autoignition	595	16.9.3 Throttle Valve Control	687
14.4 Flame Propagation	596	16.9.4 Knocking Control	688
14.4.1 Turbulent Scales	596	16.9.5 On-Board Diagnosis	690
14.4.2 Flame Types	596	16.9.6 Safety Strategy	692
14.5 Model Development and Simulation	598	<i>Bibliography</i>	694
14.5.1 Classifications for Combustion Models	599		
14.5.2 0D Models	599	17 The Powertrain	695
14.5.3 Phenomenological Models	601	17.1 Powertrain Architecture	695
14.5.4 3D-CFD Models	603	17.2 The Longitudinal Dynamics of the Vehicle	696
<i>Bibliography</i>	604	17.3 Transmission Types	696
		17.4 Power Level and Signal-Processing Level	698
15 Combustion Systems	607	17.4.1 Power Level (Figure 17.6)	698
15.1 Diesel Engines	607	17.4.2 Signal Level (Figure 17.6)	698
15.1.1 Diesel Combustion	607	17.4.3 Links	698
15.1.2 Diesel Four-Stroke Combustion Systems	612	17.5 Transmission Management	698
15.2 Spark-Injection Engines	623		

17.5.1 Functions	698	19.6.2 Evaporative Emissions Diagnostics	731
17.6 Integrated Powertrain Management (IPM®)	701	<i>Bibliography</i>	733
17.7 Components for Powertrain Electrification	702		
17.7.1 Overview	702	20 Cooling of Internal	
17.7.2 Hybrid and Electric Drive Variants	703	Combustion Engines	735
17.7.3 Components	704	20.1 General Information	735
17.7.4 Power Electronics	704	20.2 Demands on the Cooling System	735
17.7.5 Electric Motor	705	20.3 Principles for Calculation and Simulation Tools	736
17.7.6 Energy Storage Systems	706	20.4 Engine Cooling Subsystems	737
<i>Bibliography</i>	709	20.4.1 Cooling by Coolant	737
18 Sensors	711	20.4.2 Intercooling	740
18.1 Temperature Sensors	711	20.4.3 Exhaust Gas Cooling	740
18.2 Fuel-Level Sensors	712	20.4.4 Oil Cooling	741
18.3 Knock Sensors	712	20.4.5 Fans and Fan Drives	741
18.4 Exhaust Gas Sensors	713	20.5 Cooling Modules	742
18.4.1 Lambda Sensors	713	20.6 Overall Engine Cooling System	743
18.4.2 NO _x Sensor	714	<i>Bibliography</i>	744
18.5 Pressure Sensors	715	21 Exhaust Emissions	745
18.5.1 Normal Pressure Sensors	715	21.1 Legal Requirements	745
18.5.2 Medium-Pressure Sensors	716	21.1.1 Europe	745
18.5.3 High-Pressure Sensors	716	21.1.2 Japan	746
18.5.4 Pressure Switch	716	21.1.3 Harmonization of the Exhaust	
18.6 Air Mass Sensor	717	Gas Regulations	746
18.6.1 Measuring Principle	717	21.2 Exhaust Measuring Technology	746
18.6.2 Mass Air-Flow Sensor	717	21.2.1 Measuring Technology for the Certification	
18.6.3 Secondary Air Mass Sensors (SAF)	718	of Motor Vehicles	746
18.7 Speed Sensors	718	21.2.2 Measuring Technology for	
18.7.1 Passive Speed Sensors	718	Engine Development	748
18.7.2 Active Sensors	718	21.3 Pollutants and Their Origin	752
18.8 Combustion Chamber Pressure Sensors for		21.3.1 Gasoline Engine	753
Diesel Engines	719	21.3.2 Diesel Engine	754
<i>Bibliography</i>	720	21.4 Reduction in Pollutants	756
19 Actuators	721	21.4.1 Engine-Related Approaches	756
19.1 Drive	721	21.5 Exhaust Treatment for Gasoline Engines	760
19.1.1 Pneumatic Drives	721	21.5.1 Catalytic Converter Design and	
19.1.2 Electric Drives	722	Chemical Reactions	760
19.1.3 Communication with Engine		21.5.2 Catalytic Converter Concepts of Engines	
Control Electronics	722	with Stoichiometric Operation	761
19.1.4 Reset/Default Position	723	21.5.3 Catalytic Converter Concept for	
19.2 Throttle Valve Actuators	723	Lean-Burn Engines	767
19.2.1 Key Function in SI Engines	723	21.5.4 Metallic Catalytic Converter Substrate	775
19.2.2 Key Function in Diesel Engines	723	21.6 Exhaust Treatment in Diesel Engines	782
19.2.3 Additional Functions	724	21.6.1 Diesel Oxidation Catalytic Converters	782
19.2.4 "Drive-by-Wire"/E-Gas	725	21.6.2 NO _x Adsorbers for Diesel Passenger Cars	786
19.2.5 Waste Gate Function	726	21.6.3 Particles/Particle Filters	788
19.2.6 Vacuum/Prethrottle Actuators	726	<i>Bibliography</i>	809
19.3 Swirl and Tumble Plates, Resonance Charging	726	22 Operating Fluids	813
19.3.1 Port Deactivation	726	22.1 Fuels	813
19.3.2 Stratified Charge	727	22.1.1 Diesel Fuel (DK)	814
19.4 Turbocharger with Variable Turbine Geometry	728	22.1.2 Gasoline	824
19.5 Exhaust Gas Recirculation Valves	728	22.2 Lubricants	842
19.6 Evaporation Emissions, Components	730	22.2.1 Lubricant Types	842
19.6.1 Tank Ventilation Valves	730		

22.2.2 Tasks of Lubrication	842	25.2.3 Indicating—Prospects.	905
22.2.3 Lubrication Types	842	25.2.4 Cycle-Precise Signal- and Model-Based Engine Control	905
22.2.4 Lubrication Requirements	842	25.3 Visualization	906
22.2.5 Viscosity/viscosity Index (V.I.)	843	25.3.1 Functions and Discussion	906
22.2.6 Basic Liquids	845	25.3.2 Visualization Methods for Real Engine Operation	906
22.2.7 Additives for Lubricants	846	25.3.3 Visualization of Combustion in Real Engine Operation by the Flame’s Intrinsic Luminescence	908
22.2.8 Engine Oils for Four-Stroke Engines	848	25.3.4 Visualization of Illuminated Processes	914
22.2.9 Engine Oils for Two-Stroke Engines.	858	25.3.5 Visualization: The Future.	915
22.3 Coolant.	860	<i>Bibliography</i>	916
22.3.1 Frost Protection	860		
22.3.2 Corrosion Protection.	860		
22.3.3 Specifications	861		
<i>Bibliography</i>	861		
23 Filtration of Operating Fluids	863		
23.1 Air Filter	863	26 Fuel Consumption	917
23.1.1 The Importance of Air Filtration for Internal Combustion Engines	863	26.1 General Influencing Factors	918
23.1.2 Impurities in Engine Intake Air	863	26.1.1 Aerodynamic Drag	918
23.1.3 Data for Air Filter Medium Assessment	863	26.1.2 Weight	919
23.1.4 Measuring Methods and Analysis	864	26.1.3 Wheel Resistance.	920
23.1.5 Demands on Modern Air Filter Systems	865	26.1.4 Fuel Consumption	921
23.1.6 Design Criteria for Engine Air Filter Elements	865	26.2 Engine Modifications.	922
23.1.7 Filter Housings	866	26.2.1 Downsizing	922
23.2 Fuel Filters.	866	26.2.2 Downspeeding.	924
23.2.1 Gasoline Filters	866	26.2.3 Diesel Engine	925
23.2.2 Diesel Fuel Filters	867	26.2.4 Gasoline Engine.	926
23.2.3 Performance Data of Fuel Filters	870	26.2.5 Combustion Process HCCI	928
23.3 Engine Oil Filtration	870	26.2.6 Variable Valve Train	929
23.3.1 Wear and Filtration	870	26.2.7 Cylinder Shutoff	931
23.3.2 Full-Flow Oil Filters	871	26.2.8 Auxiliary Units	932
23.3.3 Removal Efficiency and Filter Fineness.	872	26.2.9 Heat Management Methods for Achieving Fuel Consumption Reductions.	934
23.3.4 Bypass Oil Filtration.	873	26.2.10 Hybrid Concepts.	934
<i>Bibliography</i>	874	26.3 Transmission Ratios.	936
		26.3.1 Selection of Direct Drive	937
24 Calculation and Simulation	875	26.3.2 Selection of Overall Transmission Ratio in the Highest Gear	937
24.1 Strength and Vibration Calculation.	875	26.4 Driver Behavior	939
24.1.1 Procedures and Methods.	875	26.5 CO ₂ Emissions	940
24.1.2 Selected Examples of Application	877	26.5.1 CO ₂ Emissions and Fuel Consumption	941
24.1.3 Piston Calculations	879	26.5.2 The Influence of Engine Use on CO ₂ Emissions	943
24.2 Flow Calculation	889	26.5.3 The Trend in Global CO ₂ Emissions.	943
24.2.1 One- or Quasi-Dimensional Methods	889	<i>Bibliography</i>	943
24.2.2 3-D Flow Calculation	891		
24.2.3 Selected Examples of Application	893		
<i>Bibliography</i>	898		
		27 Noise Emissions	945
25 Combustion Diagnostics— Indication and Visualization in Combustion Development	901	27.1 Basic Physical Principles and Terms	945
25.1 Discussion	901	27.2 Legal Provisions Concerning Emitted Noise	948
25.2 Indication.	901	27.2.1 Emitted Noise Measuring Procedure	948
25.2.1 Measuring Systems.	902	27.2.2 Critical Evaluation of the Meaningfulness of the Existing Emission Noise Measuring Procedure	948
25.2.2 Quality Criteria	904	27.2.3 Future Emission Noise Measuring Procedure and Limit Values	948
		27.3 Sources of Emitted Noise	949
		27.4 Emitted Noise-Reduction Provisions	950
		27.4.1 Engine Approaches.	950
		27.4.2 Vehicle Approaches.	950

27.5 Engine Noise in the Vehicle Interior	952	29.2.3 Functions	984
27.6 Acoustic Guidelines for the Engine Designer	953	29.3 Classification of Hybrid Drive Systems	986
27.7 Measuring and Analytical Methods	954	29.3.1 Types	986
27.8 Psychoacoustics	957	29.3.2 Power Classification	987
27.9 Sound Engineering	957	29.4 Electrical Hybrid Drive Systems	988
27.10 Simulation Tools	958	29.4.1 Electrical Machine	988
27.11 Antinoise Systems: Noise Reduction using Antinoise	959	29.4.2 Power Range	995
<i>Bibliography</i>	959	29.4.3 Control	995
		29.4.4 Power Electronics	995
		29.4.5 Current Converter	995
28 Engine Measuring Technology	961	29.5 Energy Storage Devices	996
28.1 Measuring Technology in the Test Bench Overall System	961	29.5.1 Lead-Acid Battery	998
28.1.1 Dynamometers	962	29.5.2 Nickel–Metal Hydride Battery	998
28.2 Mechanical Measurands	963	29.5.3 Sodium–Nickel–Chloride Battery	999
28.3 Thermodynamic Measurands	964	29.5.4 Lithium-Ion Battery	1000
28.4 Flow Measuring Technology	965	29.5.5 SuperCaps	1001
28.5 Intake Air Volumetric Flow Measurement	965	29.5.6 Battery Management	1003
28.6 Fuel Consumption Measurement	965	29.6 Hybrid Drive System Transmissions	1005
28.7 Fuel Conditioning	968	29.6.1 Transmissions Without Integrated Electrical Machine	1006
28.8 Oil Consumption Measurement Technology	968	29.6.2 Transmissions with Integrated Electrical Machine	1007
28.9 Blow-By Measuring Technology	969	29.6.3 Special Transmission Designs	1008
28.10 Urea Consumption Measuring Technology	970	29.7 Energy Management System	1010
28.11 Direct Exhaust Quantity Measurement	972	29.7.1 Start/Stop	1011
28.12 Exhaust Gas Measuring Technology	972	29.7.2 Regulating the Generator	1012
28.13 Measurement of the Volumetric Concentration of Gaseous Exhaust Gas Components	973	29.7.3 Energy Recuperation	1012
28.14 Pollutant Mass Determination at Undiluted Exhaust Gas	973	29.7.4 SOC Regulation	1013
28.15 Pollutant Mass Determination at Diluted Exhaust Gas	974	29.7.5 Energy Distribution Management	1013
28.16 Exhaust Gas Particulate Measuring Technology	974	29.7.6 On-Board Power Supply System	1014
28.16.1 Gravimetric Particulate Measurement	974	29.8 Operating Strategies	1014
28.16.2 Dynamic Particulate Measurement	975	29.8.1 Efficiency	1014
28.16.3 Measurement of the Soot or Smoke Emission	975	29.8.2 Energy Balance	1016
28.16.4 Smoke Emission Value Measurement with “Smoke Meter”	975	29.8.3 Fuel Consumption	1016
28.16.5 Opacity Measurement Using “Opacimeters”	975	29.8.4 Exhaust Emissions	1016
28.16.6 Photoacoustics (PASS)	975	29.8.5 Driving Performance	1017
28.16.7 Laser-Induced Incandescence	976	29.8.6 Approaches for Determining an Operating Strategy	1017
28.16.8 Scattered Light Measurement	976	29.9 Current Hybrid Vehicles	1017
28.16.9 Particle Group and Particle Total	976	29.9.1 Systems	1018
28.16.10 Measurement Data Processing and Evaluation	976	29.9.2 Vehicle Design	1021
<i>Bibliography</i>	977	29.10 Future Development	1024
		29.10.1 Gasoline Hybrid Drive System	1024
		29.10.2 Diesel Hybrid Drive System	1024
		29.10.3 Electric-Only Drive	1025
		<i>Bibliography</i>	1025
29 Hybrid Drive Systems	979	30 Alternative Vehicle Drives and APUs (Auxiliary Power Units)	1029
29.1 History	979	30.1 Reasons Behind Alternatives	1029
29.2 Fundamentals of Hybrid Drive Systems (General Overview)	983	30.2 Hybrid Vehicles	1030
29.2.1 Principle	983	30.2.1 Fuel Consumptions in the Official Test Mode	1033
29.2.2 Components	983		

30.2.2 Practical Fuel Consumption Standard Test Route: AMS	1033
30.2.3 Plug-In Hybrid Vehicles	1036
30.3 Electric Drive System	1036
30.4 Energy Storage Devices	1039
30.5 Stirling Engine	1040
30.6 Gas Turbine	1041
30.7 The Fuel Cell as a Vehicle Drive System	1042
30.7.1 Design of the PEM Fuel Cell	1042
30.7.2 The Fuel Cell in the Vehicle	1043
30.7.3 Assessment of the Fuel Cell in Comparison to other Drive Systems	1046
30.8 Synoptic Evaluation of Alternative Energies and Drive Systems	1047
30.9 Generating Electricity using an Auxiliary Power Unit = APU	1047
30.9.1 Thermoelectrics	1047
30.9.2 The Fuel Cell as an APU	1047
30.9.3 Internal Combustion Engine in Combination with a Linear Generator (Free-Piston Linear Generator)	1050
<i>Bibliography</i>	1050
<i>Further Literature on the Subject of Hybrids and Fuel Cells</i>	1051
31 Energy Management in the Engine and Vehicle	1053
31.1 Losses During Energy Conversion	1055
31.2 Requirement-Based Energy Management	1055
31.3 Generating Electricity in Vehicles	1056
31.3.1 Thermoelectric Generator (TEG)	1057
31.4 Heat Management	1059
<i>Bibliography</i>	1060
32 Forecast	1061
32.1 Gasoline Engine	1061
32.2 Diesel Engine	1062
32.3 Concluding Observations	1063
<i>Bibliography</i>	1064
Color Section	1065
