SECTION 1

Introduction to Particulate Emissions	<u>1</u>
---------------------------------------	----------

CHAPTER 1

Gasoline Engine Particulate Emissions Introduction	<u>3</u>
--	----------

References	<u>7</u>
------------	----------

About the Authors	<u>8</u>
-------------------	----------

CHAPTER 2

Health Impact of Particulates from Gasoline Engines	<u>9</u>
---	----------

2.1 Air Pollution: A Brief Historical Survey	<u>10</u>
---	------------------

2.2 Interactions of Inhaled Air Pollutants with the Respiratory System	<u>11</u>
---	------------------

2.2.1 The Journey of an Inhaled Particle: Macro- and Microscopic Structure of the Respiratory System	<u>12</u>
--	-----------

2.2.2 Clearance Mechanisms	<u>15</u>
----------------------------	-----------

2.2.3 Mechanisms Underlying the Adverse Health Effects	<u>16</u>
--	-----------

2.3 Hazard and Risk Identification of Gasoline Exhaust	<u>18</u>
---	------------------

2.3.1 Epidemiological Findings	<u>18</u>
--------------------------------	-----------

2.3.2 Findings from In Vivo Studies	<u>19</u>
-------------------------------------	-----------

2.3.3 Findings from Ex Vivo and In Vitro Studies	<u>20</u>
--	-----------

2.4 Conclusions and Future Recommendations	<u>22</u>
---	------------------

Acknowledgments	<u>23</u>
------------------------	------------------

Glossary	<u>23</u>
-----------------	------------------

References	<u>24</u>

About the Authors	<u>31</u>
--------------------------	------------------

CHAPTER 3**Regulations and Environmental Technologies 33****3.1 Why the Emphasis on Particulates from Modern Gasoline Engines? 33**3.1.1 Health Risks 343.1.2 Global Warming Considerations 363.1.3 Secondary Organic Aerosols (SOA) 37**3.2 Regulations on Vehicular Exhaust Particulate Emissions 37**3.2.1 United States and California 373.2.2 Europe 393.2.3 Test Procedures 393.2.4 China 423.2.5 India 44**3.3 Technology Pathways 45**3.3.1 In-Cylinder Methods 453.3.2 Fuel Considerations 483.3.3 Aftertreatment System 49**3.4 Summary 51****References 51****About the Author 60****SECTION 2****Fundamentals of Particulate Emissions 61****CHAPTER 4****Soot Formation in Combustion 63****4.1 Combustion-Generated Particles 63**4.1.1 Organic Fraction 654.1.2 Sulfate Fraction 654.1.3 Nitrate Fraction 654.1.4 Carbonaceous Fraction 654.1.5 Ash Fraction 65

4.2 Soot Formation	<u>66</u>
4.3 Influencing Factors on Soot Formation in Gasoline Engines	<u>68</u>
4.3.1 Inhomogeneity	<u>68</u>
4.3.2 Tip Sooting	<u>70</u>
4.4 Soot Formation in Different Operating Points	<u>72</u>
4.4.1 Higher Specific Loads and Low Engine Speeds	<u>72</u>
4.4.2 Engine in Transient Operation Points	<u>74</u>
References	<u>77</u>
About the Authors	<u>81</u>

CHAPTER 5

Fuel Impact on Particle Formation	<u>83</u>
References	<u>93</u>
About the Author	<u>100</u>

SECTION 3

Particulate Emission Reduction Technologies	<u>101</u>
--	-------------------

CHAPTER 6

Advanced Gasoline Combustion and Engine Controls	<u>103</u>
6.1 Gasoline Direct Injection	<u>103</u>
6.1.1 PN Formation Mechanisms	<u>103</u>
6.1.2 Operating Conditions	<u>105</u>
6.1.3 Engine Calibration	<u>109</u>
6.1.4 Summary Formation Mechanism	<u>111</u>
References	<u>112</u>
About the Authors	<u>113</u>

CHAPTER 7**Gasoline Particulate Filter Design,
Fundamentals, and Function** 115**7.1 Introduction** 115**7.2 Aftertreatment Architectures Using GPF** 116**7.3 General Filter Design and Application Requirements** 117**7.4 Filter Design Fundamentals and Considerations** 1197.4.1 Material Selection 1197.4.2 Filtration 1207.4.3 Pressure Drop 1247.4.4 Catalyst Functionality 1297.4.5 Mechanical Robustness and Packaging 129**7.5 Application Fundamentals** 1307.5.1 Filtration over Different Emission Cycles 1307.5.2 Ash Accumulation 1327.5.3 Filter Design Based on Pressure Drop 1357.5.4 Soot Oxidation and Regeneration 137**7.6 Summary** 140**References** 140**About the Author** 144**CHAPTER 8****Gasoline Particulate Filter
Application and Durability** 145**8.1 Introduction** 145**8.2 Filtration Efficiency in Practical Applications** 1468.2.1 Procedures for Particulate Emission Measurement 1468.2.2 Effect of Application Conditions on Filtration Efficiency 1488.2.3 Evolution of Filtration Efficiency over Initial Mileage 1518.2.4 Evolution of Filtration Efficiency over Extended Mileage 152

8.3 Ash Accumulation in Vehicle Applications	<u>154</u>
8.4 Soot Management in Vehicle Applications	<u>158</u>
8.4.1 Soot Load Monitoring	<u>158</u>
8.4.2 Examples of GPFs Operated in Purely Passive Applications	<u>160</u>
8.4.3 Examples of Severe Soot Regeneration	<u>165</u>
8.5 Thermal Robustness Requirements in Vehicle Applications	<u>167</u>
8.5.1 Thermal Stress Due to Transient Changes in the Boundary Conditions	<u>167</u>
8.5.2 Thermal Stress Due to Severe Soot Oxidation	<u>169</u>
8.6 Summary and Conclusions	<u>173</u>
References	<u>174</u>
About the Authors	<u>176</u>

CHAPTER 9

Three-Way Catalyst Integration into Particulate Filters	<u>177</u>
9.1 Introduction	<u>177</u>
References	<u>189</u>
About the Authors	<u>190</u>

CHAPTER 10

Three-Way Catalyst Gaseous Emissions: Gasoline Particulate Filter vs. Flow-Through Substrates	<u>191</u>
10.1 Introduction	<u>191</u>
10.2 Typical System Architectures	<u>192</u>
10.3 Design of Filter Coating and Effect on Gaseous Conversion	<u>193</u>

10.4 Examples of the Gaseous Emissions Conversion Performance of Coated GPFs	<u>197</u>
10.5 Summary	<u>200</u>
Reference	<u>201</u>
About the Authors	<u>202</u>

CHAPTER 11

Uncoated Gasoline Particulate Filter Integration and Examples	<u>203</u>
Summary	<u>203</u>
11.1 Introduction	<u>204</u>
11.2 GPF Design/Integration	<u>204</u>
11.2.1 Functional Requirements	<u>205</u>
11.2.2 GPF System Operation	<u>206</u>
11.2.3 Associated Test Procedures	<u>208</u>
11.3 Tuning Impact of the GPF	<u>211</u>
11.3.1 Engine Performance	<u>211</u>
11.3.2 GPF Monitoring Strategies	<u>213</u>
11.4 GPF System Validation	<u>214</u>
11.4.1 Filtration Efficiency Tests	<u>214</u>
11.4.2 Vehicle Road Tests	<u>215</u>
11.5 Conclusion	<u>220</u>
About the Author	<u>221</u>

CHAPTER 12

System Integration and Application for a Three-Way Catalyst-Coated Gasoline Particulate Filter	<u>223</u>
12.1 Design of TWC-Coated GPF	<u>223</u>
12.1.1 PN FE	<u>224</u>
12.1.2 Optimization of PN FE	<u>225</u>

12.2 Soot Regeneration	<u>226</u>
12.2.1 Soot Regeneration with Respect to Oxygen Concentration	<u>226</u>
12.2.2 Soot Mass Limit	<u>228</u>
12.2.3 Soot Regeneration Rate	<u>229</u>
12.3 Durability Test	<u>230</u>
12.3.1 PN FE	<u>230</u>
12.3.2 Ash Effect on SML	<u>231</u>
12.4 Implementation of GPF in Mass Production Vehicles	<u>233</u>
References	<u>233</u>
About the Authors	<u>234</u>

SECTION 4

Measurement, Modeling and Control	<u>235</u>
--	-------------------

CHAPTER 13

Measurement of Gasoline Particle Emissions: Laboratory and On-Board Vehicle	<u>237</u>
--	-------------------

13.1 Background to the Development of Particle Number (PN) Counting	<u>237</u>
13.2 CPC Design	<u>238</u>
13.3 PN Counting System Design	<u>240</u>
13.4 Performance Criteria for Particle Counting Systems	<u>241</u>
13.5 Periodic Calibration and Validation	<u>241</u>
13.6 PN Limit Specified for EURO 5 Compression Ignition Vehicles	<u>242</u>
13.7 Other Legislative Applications of PN Limits	<u>242</u>
13.8 PN Counting Systems for Real Driving Emissions	<u>242</u>
13.9 Example: A PEMS-PN System Based on a CPC (HORIBA OBS-ONE-PN)	<u>243</u>
13.10 Example: A PEMS-PN System Based on an Advanced Diffusion Charger Design (TESTO NANOMET-3)	<u>245</u>

13.11 Application of PEMS-PN to Other Automotive Exhaust Applications	<u>246</u>
13.12 Future of PN Measurement Within the EU	<u>247</u>
13.13 Future Applications of PN Counting for Non-exhaust Emissions	<u>247</u>
Acknowledgments	<u>247</u>
References	<u>248</u>
About the Author	<u>249</u>

CHAPTER 14

On-Board Diagnostics for Gasoline Particulate Filters	<u>251</u>
14.1 Introduction	<u>251</u>
14.2 Regulation Overview	<u>252</u>
14.3 GPF Failure Modes	<u>254</u>
14.3.1 Missing GPF Substrate	<u>254</u>
14.3.2 GPF Cracking and Channel Damage	<u>254</u>
14.4 GPF Sensing	<u>255</u>
14.4.1 DPS	<u>256</u>
14.4.2 Resistive PM Sensor	<u>256</u>
14.4.3 Ion Charge Sensor	<u>257</u>
14.4.4 Escaping Current PM Sensor	<u>257</u>
14.4.5 Radio Frequency Sensor	<u>258</u>
14.5 Algorithm Development	<u>258</u>
14.5.1 Flow Restriction	<u>259</u>
14.5.2 Differential Pressure Signal	<u>260</u>
14.5.3 Fault Criteria	<u>260</u>
14.5.4 System Identification	<u>261</u>
14.5.5 Monitor Enable Conditions, Calculations, and Thresholds	<u>263</u>
14.6 Algorithm Validation	<u>263</u>
14.6.1 Validation Strategies	<u>263</u>
14.6.2 Regulatory Requirements	<u>266</u>
References	<u>266</u>
About the Authors	<u>267</u>

CHAPTER 15

Modeling of Gasoline Particulate Emission Control Systems and Components	<u>269</u>
15.1 Introduction	<u>270</u>
15.2 Wall-Scale Modeling	<u>272</u>
15.2.1 Wall Filtration	<u>272</u>
15.2.2 Effect of Accumulated Soot on Filtration	<u>276</u>
15.2.3 Pressure Drop	<u>279</u>
15.3 Channel-Scale Modeling	<u>281</u>
15.3.1 Mass-Momentum Balance	<u>282</u>
15.3.2 Pressure Drop	<u>282</u>
15.3.3 Energy Balance	<u>286</u>
15.3.4 Species Balance	<u>287</u>
15.3.5 TWC Reactions	<u>291</u>
15.3.6 Soot Reactions	<u>295</u>
15.4 Filter Scale Modeling	<u>299</u>
15.4.1 Filter Regeneration in Fuel Cut-Off Events	<u>299</u>
15.4.2 Ash Accumulation	<u>300</u>
15.5 Conclusions	<u>307</u>
Acknowledgments	<u>308</u>
