## CONTENTS

Acknowledgments xi  
Introduction xiii

### CHAPTER 1

**Perspectives on Investigations and Investigators 1**

- Basic Anatomy of an Accident and Its Reconstruction 1  
- Why Are Aircraft Accidents Investigated? 3  
- The Human Factors Aspect 3  
- Requirements to Become an Investigator 4  
- Generalists and Specialists 5  
- “Heavy Iron” Versus Most General Aviation Investigators 6  
- When Consultants/Experts Become Involved 7  
- Space Is the Next Frontier 8

### CHAPTER 2

**Back to Basics 9**

- Physical Evidence Is King 9  
- Close Calls 10  
- One Piece at a Time 11  
- The Scientific Method 12  
- Nine-Box Matrix 12  
- Consider Even the Absurd 15  
- Consequences of Incomplete and Inaccurate Findings 17  
- Summary of Lessons Learned 22

### CHAPTER 3

**On-Scene Investigation 25**

- Before the Investigation Team Arrived 26  
- Basic Investigation Gear 27  
- Safety Considerations 29  
- Emotional Considerations 29
CHAPTER 7
Mid-Air Collisions 109
Pilot Awareness 109
See-and-Avoid Issues 110
Structural Impact and Scratch Marks 115

CHAPTER 8
Fire and Explosions 121
General Aspects of Aircraft Fires 121
Post-Impact and Ground Fires 122
In-Flight Fires 123
Determining Origin of Fires 125
Types of Aircraft Explosions 127
Damage Caused by Detonation 128
Damage Caused by Deflagration 129

Conclusion 131
Appendix A 133
Aircraft Wreckage Reconstruction Terms 133

Appendix B 139
Handy Numbers/Conversions/Equations 139
