Bibliography

[200] *QuaRC 1.0 Installation Guide* (Quanser, Inc.).

This page intentionally left blank
Index

abrupt faults, 12, 32, 66, 112
active fault-tolerant control, 14
actuator faults, 31
almost-lighter-than-air vehicle (ALTAV), 25–27, 31, 32, 82, 189
anomaly, 9, 13
autopilot, 19, 27, 28, 37, 57, 60, 106
backpropagation, 160
base, 134, 142
Bayesian filter, 134, 165
bilinear matrix inequalities (BMIs), 34
body damage, 2, 14, 32
center of mass (CM), 27
classification, 145, 179
collisions, 10, 40, 60
command adaptation, 90
commercial-off-the-shelf (COTS), 2, 200, 205
communication breakdown, 9, 175, 199
communication network, 42, 82, 150, 171, 174, 200
component-level faults, 11, 31, 62
condition monitoring, 132
consensus, 35, 170, 171, 182
constrained digital implementation (CDI), 129
detection, 13, 15, 16, 22, 62
detection boolean (DB), 79, 90, 93, 113
decision function, 83, 86, 89
decision policy, 156, 160, 164
degree of freedom (DOF), 58, 62
decentralized abrupt fault detection (DAFD), 62, 64, 69, 79
decentralized fault detection and command adaptation (DFD-CA), 22
decentralized non-abrupt fault detection (DNaFD), 80, 89
decision function, 83, 86, 89
decision policy, 156, 160, 164
degree of freedom (DOF), 58, 62
detection, 13, 15, 16, 22, 62
detection boolean (DB), 79, 90, 93, 113
detection time, 128
digital implementation, 129
directed acyclic graph (DAG), 39, 147
discretization, 85
distributed computation, 172, 173, 182
disturbances, 14, 31, 35, 41, 42, 48, 65
Dryden model, 41, 122
dynamic programming equation
edges, 37, 38, 82, 142, 143
electro-optical (EO), 2
environmental effects, 7, 116, 121, 163
estimator, 83, 85, 164, 165, 175
Euclidean norm, 32, 36
expectation, 158, 160
expected value, 88
false alarm, 68, 79, 84
false threat, 144, 150
fault detection and isolation (FDI), 16
fault detection, isolation and recovery (FDIR), 15
fault-tolerant control (FTC), 2, 14
fault/failure detection and diagnosis (FDD), 11, 16
faults, 4, 7, 31
feasible paths, 147
filter, 61, 72, 73, 96, 98
float fault, 32
followers, 40
formation, 4, 21, 38, 43, 134
formation control, 33, 37, 42, 60
formation geometry, 41
formation topology, 38
formation-target assignment (FTA), 191
Gaussian noise, 104
Global Positioning System (GPS), 8
grid, 135, 142
ground units, 140
guidance, navigation and control (GNC), 2
hard-over fault (HOF), 32
heading angle, 37, 47, 80, 83
health management, 1, 2, 13, 138
health state, 174, 177
heuristic, 134
heuristics, 172
high-level threats, 156
hypothesis test, 82, 86
inertial measurement unit (IMU), 2
inertial navigation system (INS), 2
information flow faults, 6, 22, 174
information management, 132, 134, 164
information state vector, 146
infrared (IR), 2
interconnection matrix, 94, 102
leader, 4, 27, 35, 40
likelihood, 165
line of sight (LOS), 34
linear matrix inequalities (LMIs), 34, 85
lock in place (LIP) fault, 32
loss of buoyancy (LOB), 32
loss of effectiveness (LOE) fault, 32
low-level threats, 156
maneuvering energy, 143
maneuvers, 60, 143, 156
Markov decision process (MDP), 12, 152
maximum a posteriori (MAP) estimate, 171
miniature or micro aerial vehicle (MAV), 3
mission planning, 133
Monte-Carlo simulations, 169, 170, 182, 183
motor, 27, 31, 113
multi-formations, 138
neighbor, 38, 46, 170
network, 150, 200
node, 37, 142
observer, 16, 17, 19, 61
obstacle avoidance, 58, 60, 104
parallel implementation, 200
parametric uncertainty, 109
partially known environment, 158
passive fault-tolerant control, 14
Index

passivity, 44, 45
path, 134, 135, 138, 143
path length constraint, 158, 184
path planning, 133, 147, 160
perfect information, 158, 160
perilous edge, 144, 146, 185
permutations, 148
PID, PD control, 28, 57, 61, 106
probability distribution, 86
probability mass function, 165
probability of survival, 155, 195
pseudorandom number generator (PRNG), 182
Pythagorean hodograph (PH) curves, 59
quadrotor, 29, 32, 102
rapid prototyping, 202
reachable states, 163
real-time constraints, 16, 171, 204
receiver, 2
reconfigurable control, 18, 19
recursive Bayesian filter (RBF), 165, 171, 175, 177
residues, 68, 69, 72, 77
rollout policy, 168, 180, 199
root mean square (RMS), 68
routing and maneuvering management network (RMM-Net), 150
safe leg, 144
sampling period, 83, 104, 107, 115
sensor allocation problem, 165
sensor faults, 14, 82
sensor information management network (SIM-Net), 150
sensor likelihood function, 146
sensor vector, 166, 167
signal norm, 32, 39, 68
small-scale unmanned aerial vehicle (SUAV), 3, 22
standard deviation, 188
state of healthy neighbors (SHN), 93
state variables, 153, 203
statistical test, 83, 86, 89
strictly positive real (SPR), 34, 43, 53
surveillance vehicles (SVs), 140
targets, 5, 134, 142, 147
task assignment, 19, 133
threat configurations (TC), 145
threat control signal, 153
threats, 5, 58, 144, 146, 148, 152, 153
threshold, 17, 62, 77
trajectory generation, 60
transmitter, 2
unicycle, 37, 42, 46
unmanned aerial system (UAS), 2
unmanned aerial vehicle (UAV), 1
unmanned combat aerial vehicle (UCAV), 1
urban environment, 135, 140
wind, 7, 19, 35, 41, 121
