INDEX

ABB, 266
ACC. See Advanced cruise control
Acceleration, fuel economy and, 112, 113
Accelerometer, 338, 419
Accessories, fuel economy and, 116–117
Accident-avoidance systems. See Collision avoidance
Accident statistics, 368, 369–372
automobile size and, 372–373
daytime and nighttime driving, 376–377
driver age and, 374–375
Japan, 378–380
rural driving, 376, 383
traffic fatalities, 370, 371
United States, 369, 372–378
urban driving, 376–377, 383–384
Accidents. See Collisions; Crash dynamics; Crash protection; Safety
Active collision avoidance. See Collision avoidance
Active lean control, 337–339
Active steering, 86
Active thermo-atmosphere combustion (ATAC), 161–162, 289
Actuators, intelligent vehicles, 414, 421, 423
Adaptive cruise control, 402
Adiabatic diesels, 136
Adsorbent storage, 193, 201, 205–208
Adsorption storage, of hydrogen, 214
Advanced cruise control (ACC), 424, 427
Advanced Vehicle Control Systems (AVCS), 401
lateral maneuvers, 417–419, 430–444
longitudinal maneuvers, 417, 418, 424–430
Aerodynamic drag, 112, 114, 118, 119, 122–124
sources of, 127
streamlining and, 124–127
three-wheel vehicles, 309
Aerodynamics, 122–133
drag, 122–127
frontal area, 131–132
Aerodynamics (continued)
induced drag, 127, 129
internal flow, 127, 131
parasitic drag, 127, 129–130
profile drag, 127–129
relative wind, 124
streamlining, 124–129
AFCs. See Alkaline fuel cells
Africa
  gross domestic product (GDP) growth in, 6
  natural gas reserves in, 195
  petroleum reserves of, 11
  urban population growth in, 24
AFS. See American Flywheel Systems
AFS Trinity Power Corp., 274
AGLAR. See Atlanta Gas Light Adsorbent Research group
Agricultural ethanol. See Bioethanol
AHS. See Automated Highway System
Air bags, 391–394, 395
Air belt, 390
Air conditioning, fuel economy and, 116, 117
Air-injection supercharging, 157
Air inlet, 131, 132
Air pollution
  auto emissions and, 28–29
  greenhouse gases and global warming, 29–32
Air resistance, 124. See also Drag
Air travel, share of transportation energy use, 17–19
Airbags, 391–394
Akroyd-Stuart, Herbert, 154
Albuquerque (NM), traffic congestion in, 20
Alcohol fuels, 180
Alkaline fuel cells (AFCs), 291
All-terrain vehicles, 164
Alternating current, controllers for, 244
Alternative fuels
  advantages and disadvantages of, 177–182
  electric power to replace oil, 217–219
  energy density of, 180
  ethanol, 178, 180–182
  flexible fuel vehicles (FFVs), 182, 186
  fuel cell, 180, 189–190, 216–217
hydrogen, 179, 180, 209, 211–217
hydrogen/methane blends, 209, 210
liquefied petroleum gases (LPGs), 180, 190–193
methanol, 177, 180, 181, 182–190
natural gas, 193–209
need for, 176, 219–220

Alternative vehicles, 38–41
for the 21st century, 38–105
battery-electric vehicles. See Battery-electric vehicles
commuter cars, 51, 53–56, 279, 380
corporate leadership and, 40–41
crash protection, 77
design. See Design
doors, 78, 79–82
electronic automobiles, 85–88
in Europe, 449–467
flexible fuel vehicles (FFVs), 182, 186
fuel-cell vehicles (FCVs), 224, 225
fuel economy. See Fuel economy
hybrid/electric vehicles. See Hybrid/electric vehicles
lower vehicle mass, 45–47
“man-wide vehicles” (MWVs), 58
marketing issues, 39, 40
materials for, 53, 84–85
microcars, 450–457
narrow-lane vehicles, 51, 56–58
new paradigm for, 32–34, 38–41, 66–67, 98–100
potential market for, 92–97
station cars, 101–103
sub-cars, 61–66
three-wheel vehicles. See Three-wheel vehicles
ultra-low-mass vehicles. See Ultra-low-mass (ULM) vehicles
urban cars, 51, 59–60
see also Personal mobility products

Alternator, power required for, 116, 117
Altra EV (Nissan), 96, 259, 276
Aluminum-air batteries, 252, 256–258, 267
American Flywheel Systems (AFS), 273–274
Anderson Development Co., 206
ANG. See Low-pressure adsorbent storage
Anisotropic flywheel, 272
APU. See Auxiliary power unit
Aqueous battery systems, 249
Argonne National Laboratory, lithium polymer battery, 259
Asia
  gross domestic product (GDP) growth in, 6
  industrialization of, 5, 6
  natural gas reserves, 195
  oil consumption of, 10
  traffic congestion in, 25
  urban population growth in, 24
ATAC. See Active thermo-atmosphere combustion
Athens, traffic congestion in, 25
Atkinson cycle engine, 295
Atlanta Gas Light Adsorbent Research group (AGLAR), 193
Atmosphere, greenhouse gases, 29–32
Aura Systems, 152–153
Australia/New Zealand, urban population growth in, 24
Automated Highway System (AHS), 401
Automatic-shift manual transmission, 297
Automatic transmission, 163
Automobile aerodynamics. See Aerodynamics
Automobile crash dynamics, 381–384
Automobile design. See Design
Automobile emissions. See Vehicle emissions
Automobile safety. See Safety
Automobile size. See Vehicle size
Automobiles
  aerodynamics, 122–133. See also Aerodynamics
  crash dynamics, 381–384
  curb weight of, 42
  design. See Design
  emissions. See Vehicle emissions
  energy efficiency, 33–34
  environmental issues, 28
  global warming and climate change, 29–32
  gross domestic product and automobile ownership, 16–17
  higher fuel costs, 26–28
  leasing of, 461
  load factor, 19, 42–47
  mass/size relationship of, 33, 42
  ownership of. See Vehicle ownership
  payload capacity, 42, 43
  safety. See Safety
  size of. See Vehicle size
smaller
  benefits of, 33
  reducing hardware overhead and load factors, 42–47
subliminal messages of, 97–98
as subsystem of total transportation system, 100–104
ultra-low-mass (ULM) vehicles compared to, 45–47
underutilization of, 43–45
urban traffic, 20–26
see also Alternative vehicles; see also under Vehicle
Autonomous (advanced) cruise control (ACC), 427
Auxiliary power unit (APU), 280, 282
AVCS. See Advanced Vehicle Control Systems
AVERE. See European Electric Road Vehicle Association

Robert Q. Riley is an industrial designer and a mechanical engineer with design and engineering successes in a wide range of product categories. His automotive experience includes vehicle styling, layout, packaging, and powertrain design, focusing on low-energy-demand passenger cars. He is widely recognized for designing high-performance three-wheel road vehicles, electric and hybrid cars, and fuel-efficient internal combustion engine (ICE) automobiles of up to 128-mpg fuel economy. Nonautomotive designs range from high-performance watercraft and hovercraft to fitness equipment and medical products.

He is also known as the “Father of the Modern Bent” for his pioneering work in modern recumbent bicycle design. He recently set new standards of excellence in recumbent design with the release of his Ground Hugger XR2 carbon fiber machine. A solar-assist version of the Ground Hugger XR2 took first place in Category B (unfaired recumbents) in the 2001 Australian World Solar Cycle Challenge.

Mr. Riley consults on new product design and product strategies. He promotes environmentally friendly technologies and writes and speaks on the subject of alternative automobile design. He has led conference workshops and speaks at industry, scientific, and academic events. He consulted on the Different Roads automobile exhibit at New York's Museum of Modern Art, and he was the lead speaker at the museum's daylong symposium on the future of the automobile. He was one of two U.S. technical consultants selected by Delcan Corporation to contribute to Transport Canada's Sustainable Transportation Technology Forecast.

Mr. Riley is a member of the Society of Automotive Engineers, the Industrial Designers Society of America, the Intelligent Transportation Society—Arizona, and the Marine Technology Society. His website is located at www.rqriley.com.
