ABOUT THE AUTHOR

David R. Rogers started with a technical career in the retail motor industry. He then moved into technical positions in automotive research and development and following this, a position in technical sales and business management for automotive powertrain instrumentation and test systems allowed him to develop a detailed, practical knowledge base on combustion pressure measurement, from a user perspective and application viewpoint. He gained much of this knowledge through hands-on interaction with users of the equipment in real-life applications.

Professionally, he is a member of the Institution of Mechanical Engineers and the Society of Automotive Engineers. He is also currently a member of the board of the Institution of Mechanical Engineers, Automobile Division.
