About the Author

A mechanical engineer and automotive glass specialist, Lyn R. Zbinden began his career with Saturn Corporation in the U.S., where he designed the first Saturn windshield and backlite. He then led General Motors’ glass and glazing efforts, with a multinational team responsible for the design, engineering, manufacturing, and sourcing of its product portfolio for the next decade.

Among the many new processes he implemented, one that made history in the industry was the development and successful use of dedicated design software.

The gains in productivity and competitive edge supported by this project made Lyn the General Motors’ recipient of the “Outstanding Engineering Achievement of the Year” award in 1997. He was also responsible for the modernization of assembly plants in Europe and Mexico, optimizing plant layout, improving material handling and reducing waste.

His designs can be seen from military vehicles to Formula One race cars.

Lyn R. Zbinden currently consults to the transportation industry, and is an active member of SAE International.
