About the Authors

André Lafon

At Airbus, André Lafon leads the Research & Technology Project on maintenance operations solutions and technologies. He joined the company in 2005 to manage research and technology in the field of avionics platforms. Prior to joining Airbus, Lafon had several technical and management positions at ONERA, the French Aerospace Research Centre, and at the French Ministry of Defense, where he was involved in a number of technical projects in the field of aerospace and defense relating to aerodynamics, propulsion, and energy systems. He graduated from Ecole Polytechnique and has a PhD in mechanical engineering from Paris University.

Charles Dibsdale

Charlie Dibsdale is a chief of research and IP management for Controls and Data Services (CDS), a fully owned subsidiary of Rolls-Royce. Dibsdale has played a major influencing role in developing the commercially successful IVHM capability. His engineering career started as an electrical technician in the Royal Navy submarine service, operating and maintaining submarine machinery and nuclear plants. He has a BS in computer science and an MSC in information systems. For over 17 years, Dibsdale has specialized in predictive maintenance. His new role in research will focus on IVHM and big data capability to help maintain CDS as a world-leading company.

Dashiel Kolbe

Dashiel Kolbe is the application engineer for the Integrated Vehicle Health Management (IVHM) program for GE Aviation. In this role, Kolbe manages the technical roadmaps for all program activities and is a principal technical strategist for IVHM program activities. His areas of expertise are in data analysis, user interface design, and data retrieval. Kolbe began his career as an engineer with Smiths Aerospace but joined the GE team upon the acquisition of Smiths. Prior to his work in IVHM, he focused on areas of advanced research including terrain databases, zero-visibility taxiing, synthetic vision, flight deck design, and mobile flight planning. Kolbe teaches courses in advanced avionics in GE’s Edison engineering program. He graduated from Michigan State University with a doctorate in computer science.

David Jennions

Dr. David Jennions is the automation lab manager at Axxam SpA in Milan, Italy. He moved to Axxam in 2012, leading the integration of novel instrumentation and new informatics systems into their high-throughput screening systems. Jennions has been involved in BioTech
David Webster PhD is a research fellow working in the school of computing at the University of Leeds and co-author of over 20 peer-reviewed papers in the fields of distributed systems Since 2004. Webster’s primary research involvement is within the joint EPSRC and Jaguar Land Rover sponsored Programme for Simulation Innovation, focusing on analysis of the vehicle as a complex system through virtual simulation. He has previously been involved in the Technology Strategy Board sponsored STRAPP project with industrial collaborators Rolls-Royce and Cybula Ltd. to address the issue of trust in the use of shared digital systems. He also was involved in the joint BAE Systems and EPSRC sponsored NECTISE programme to support Network Enabled Capability (NEC). Webster received his first PhD from University of Hull in 2010 and his second from the University of Leeds in 2013.

Dinkar Mylaraswamy

Dr. Dinkar Mylaraswamy is the technology fellow for condition-based maintenance and decision-support applications within Honeywell’s Advanced Technology organization. His areas of expertise are fault diagnosis and process monitoring, machine-learning, and control. Mylaraswamy is responsible for identifying and maturing strategic health management technologies that cut across multiple products and services, providing inputs for strategic technology investments, and mentoring. He joined Honeywell in 1997 after completing his PhD from Purdue University. He spent his first six years in Honeywell developing and deploying an early abnormal event detection application at six refinery sites in North America. On the aerospace side, Mylaraswamy was the technical lead for Honeywell’s Predictive Trend Monitoring program, a web-based application for monitoring aircraft engines. He continues to serve as the technical lead on various health management programs.

Emre Civan

Emre Civan is an engineer with Turkish Airlines. He is responsible for the implementation of Airplane Health Management (AHM) software for Boeing 777 airplanes. Boeing’s AHM is a customer support tool that delivers alerts and notifications to operators, enabling them to diagnose problems and help with operator awareness of fleet status. Civan received a BS and MS from Istanbul Technical University.
University in aerospace engineering. He started his career at Turkish Airlines in 2004, and worked as an engineer in technical departments such as aircraft systems, maintenance, and structural engineering.

Frank Kramer
Frank Kramer is involved in research and technology projects for Airbus future maintenance systems. He joined the company in 1991 to be responsible for quality tests of the Single Aisle Family aircraft. He was then responsible for BITE standardization for A380 and A350 aircraft, product requirements, and the design process before moving to research and technology in 2011. Prior to joining Airbus, Kramer worked in embedded control system business (hardware and software design) for a pharmaceutical manufacturing organization and also for an audio signal processing company. He holds a communications engineering degree.

Frédéric Martinez
At Airbus, Frédéric Martinez is head of maintenance and engineering application definition and an expert in aircraft health monitoring. He joined Airbus in 2006 to lead the AIRMAN project (Airbus application dedicated to aircraft health monitoring). In 2007, he launched the project AIRMAN-web. Prior to joining Airbus, Martinez was at Air France, where he took several positions: team leader, maintenance control centre engineer, systems engineer, maintenance instructor, and head of line maintenance engineering, having the opportunity to work on various types of aircraft and technologies. He started his aeronautical career as Petty Officer involved in helicopter heavy maintenance in the French naval army. Frédéric Martinez holds an aeronautical maintenance degree.

Ian K. Jennions
Ian K. Jennions is a Professor and Director of the IVHM Centre, Cranfield University, UK. He joined the Centre, which is funded by a number of industrial partners, when it was founded in 2008 and has led its development and growth in research and education over the last three years. Previously, Ian had worked for a number of companies in the gas turbine industry over a 30-year career. He worked for Rolls-Royce, General Electric, and Alstom in a number of technical roles, gaining experience in aerodynamics, heat transfer, fluid systems, mechanical design, combustion and, more recently, IVHM. He has a Mechanical Engineering degree and a Ph.D. in CFD, both from Imperial College, London. He is a Director of the PHM Society, contributing member of the SAE IVHM Steering Group and HM-1 IVHM committee, and a Fellow of IMechE, RAeS, and ASME. He was also the editor of SAE International’s Integrated Vehicle Health Management: Perspectives on an Emerging Field.
Ian Mitchell
Ian Mitchell has been the programme leader of the computer forensics programme at Middlesex University since 2007. Mitchell teaches four modules in the programme. His research is not limited to file systems analysis, but also includes bioinformatics, evolutionary computation/algorithms, artificial neural networks, and artificial intelligence. Mitchell is co-investigator on an EU funded project to research neuromorphic embedded agents that learn. He completed his PhD in computer science in 1999 at the University of North London. In 1998, Mitchell was employed at Middlesex University as a lecturer and was promoted to principal lecturer in 2010. He was undergraduate director of programmes between 2007 and 2013, and validated a number of programmes including computer forensics.

João Malere
João Pedro P. Malere has been a development engineer in the IVHM research group at Embraer since 2006. His work is focused on health management, including IVHM systems architecture, design, and implementation. He is the project manager of one of the Embraer research initiatives related to the theme. Prior to joining Embraer, Malere was a development engineer at General Motors, where he worked with new products development. He holds a BS in control engineering from Universidade Estadual de Campinas (Unicamp) and an MS in aeronautical engineering from Instituto Tecnológico de Aeronáutica (ITA). He is a member of the SAE HM-1 group.

Jacob Bortman
Prof. Jacob Bortman joined the academic faculty of Ben Gurion University in 2010 as a full professor, after having spent thirty years in the Israel Air Force (IAF), from where he retired with the rank of Brigadier General. In the IAF, he led the fatigue and damage tolerance lab, the unmanned aerial vehicle and space departments, the engineering laboratories, and the aircraft department. Prof. Bortman was also the head of the material directorate. Prof. Bortman has a PhD in mechanical engineering, and one of his main areas of expertise is finite element methods. His current areas of research at BGU include health usage monitoring systems, condition-based maintenance, and usage and fatigue damage survey.

Mervyn Floyd
Mervyn Floyd is a private consultant on IVHM and other related monitoring topics. He started his engineering career at Rolls-Royce Derby specializing in controls and accessories. In 1971, he joined Vibro-Meter Switzerland to assist in contract fulfillment for the vibration monitoring system for the L1011. As chief of avionic projects, Floyd expanded upon this basis to include similar systems on Douglas, Boeing, and Airbus airplanes. In 1986, he moved to the United States to provide support at the OEM’s engine and airframe units. When Vibro-Meter was acquired by Meggitt, Floyd
became the customer relations manager for Meggitt products at Boeing. During this time, he managed the expansion of the systems at Boeing from engine vibration monitoring to include advanced bearing diagnostics/prognostics, and finally the inclusion of the engine monitoring unit on B-787 airplanes.

**Michael J. Augustin**

Mr. Augustin is president and principal investigator at IVHM Inc., an aerospace consulting business focused on advanced sensors and systems for aerospace applications. Mr. Augustin retired from Bell Helicopter in 2011 with 25 years of experience. His work was focused on the development of advanced systems and sensors, particularly in the HUMS/CBM and enhanced safety areas. He joined Bell Helicopter Textron in 1986 after working 17 years for Motorola. At Bell Helicopter, his work included the VSLED diagnostic system for the V–22 Osprey, flight recorders for the Bell 212/412 helicopter models, and development of HUMS programs. Mr. Augustin is a graduate of the University of Wisconsin – Madison, with an emphasis in communications systems.

**Michael J. Provost**

Dr. Michael J. Provost joined Intelligent Energy Ltd., a clean power systems company focused on the development and commercialization of fuel cell systems, in 2010 as Engineering Fellow, Predictive Asset Management. He is responsible for technical leadership of the development and roll-out of asset management techniques across all of Intelligent Energy’s product lines. Before this, Dr. Provost spent 27 years at Rolls-Royce, which included working on modeling and analysis of civil aero-engine performance, aero-engine condition monitoring, corporate strategic planning, and advanced civil aero-engine and more-electric aircraft systems design. He spent two years at Data Systems & Solutions, working on applications of aerospace asset management techniques in areas such as railways, and five years at Bombardier Transportation.

**Murat Yukselen**

Murat Yukselen started his career in a Part-145 organization in Prima Aviation Services Inc. as an aeronautical engineer and shop superintendent, responsible for certifying maintenance activity, tracking and evaluating authority and manufacturer publications, airworthiness management of components, workload planning, marketing, and customer relationship management. He then moved to Turkish Airlines Technic, Inc., where he started his specialization in APU fleet management, and aircraft delivery and procurement management. He developed and participated in over
30 projects of new business, process management, Part-M, and Part-145 engineering. Yukselen has become a technical lead and is experienced in EASA and FAA regulations and their implementation. He completed his BS in aeronautical engineering at Istanbul Technical University.

Ravi Rajamani
Dr. Ravi Rajamani joined Meggitt in 2011 as an engineering director, after spending nearly 11 years with United Technologies Corporation, first at the Research Center, and then with its Pratt & Whitney division. Before this he was with GE for ten years. His primary focus has been in the area of controls and diagnostics of gas turbines for aerospace and industrial applications. Rajamani has a BTech (ME) from IIT Delhi, an MS (Automation) from IISc, Bangalore, and a PhD (EE) from the University of Minnesota. He also has an MBA from the University of Connecticut. He has published numerous papers in refereed journals and conference proceedings.

Rhonda Walthall
Rhonda Walthall is the manager of prognostics and health management at UTC Aerospace Systems. Since 2010, she has led the development of the Aircraft System Health Management (ASHM) tool. She joined United Technologies Corporation (UTC) in 2003 as a Systems Engineer at Hamilton Sundstrand Power Systems, where she was responsible for the verification and validation and certification of electronic controller software for auxiliary power units. Before joining UTC, Walthall spent eight years at Northwest Airlines as a multi-fleet engine condition monitoring engineer and a business unit manager. She helped to establish the FOQA program still in use at Delta Airlines. Prior to her career at Northwest Airlines, Rhonda spent eight years as a propulsion engineer and a flight test engineer for McDonnell Douglas on the MD-11 and C-17 programs with a focus on aircraft and engine performance. She is the Vice Chair of the SAE IVHM Steering Group, a past Chair and current member of the SAE E32 Committee for Aerospace Propulsion Systems Health Management, a member of the SAE HM-1 Committee for Health Management, a member of SAE International, and a member of the PHM Society. Walthall received her BS in Aeronautical and Astronautical Engineering from Purdue University and an MBA from Pepperdine University.

Robby O’Dell
Robby O’Dell is program manager for advanced cockpit programs at Gulfstream Aerospace Corporation. Before that, he spent four years leading the Gulfstream aircraft health and trend monitoring research and development team. As program manager, his responsibilities included the planning, development, certification, and integration of the G650 Aircraft Health and Trend Monitoring System (AHTMS). Prior to leading the AHTMS development, O’Dell worked for two years in a program management role focusing on entry-into-service efforts for mid-cabin Gulfstream aircraft. He began his career at Gulfstream in electronic systems engineering. O’Dell has
a BS in biomedical engineering, an MS in electrical engineering, and an MBA, all from Mercer University.

**Sean Barker**

Since 2000, Barker has worked at BAE Systems’ Advanced Technology Centre, working on a variety of information integration and enterprise architecture projects. In 1997, he was seconded to a BAE/Dassault Aviation Joint Venture in Paris. In 1990 he joined BAE Systems, where he developed CAD software before moving to data exchange and data management. Prior to that, Barker was a research fellow in computer-aided design at the Polytechnic of Central London, and worked at Brunel University. Barker has a degree in mathematics from Imperial College London. He is a fellow of the British Computer Society.

**Sukhvinder Hara**

Hara is pursuing a professional doctorate in information security at the University of East London, in digital forensic readiness and risks afforded by insider attacks in response to organizational decisions. She completed her MSc in information security and forensics in 2008 and is currently a senior lecturer at Middlesex University. Hara was a senior forensic computer analyst between 2002 and 2009 for the Serious Fraud Office, a law enforcement agency in the UK, and has worked on numerous high-profile cases. Research interests focus on legal aspects of privacy and data protection, privacy and security in intelligent environments, cyber security, E profiling, evidence management, risk management, information security, policy management, forensic capability, cloud forensics, human factors in security, overt monitoring methods, employee insider threat management, fraud investigations, and legal aspects of digital forensics.
