About the Author

Dr. Paul Kurowski

Dr. Paul Kurowski obtained his M.Sc. and Ph.D. in Applied Mechanics from Warsaw Technical University, Warsaw, Poland. He completed postdoctoral work at Warsaw Technical University, Kyoto University, and the University of Western Ontario. Paul Kurowski is professor in the Faculty of Engineering at the University of Western Ontario. He teaches undergraduate and graduate courses in Product Design, Finite Element Methods, Computer Aided Engineering, Vibration Analysis and others. Paul is also the President of Design Generator Inc., a consulting firm with expertise in Product Development and training in Computer Aided Engineering methods. He has published many technical papers and created and taught professional development seminars in the field of Finite Element Analysis for SAE International, ASME, Professional Engineers of Ontario, Parametric Technology Corporation (PTC), Rand Worldwide, SOLIDWORKS Corporation and others.

His professional interests revolve around finding the best ways of using Computer Aided Engineering (CAE) methods for faster and more effective product development processes where computer models replace physical prototypes.

Paul is a member of the Association of Professional Engineers of Ontario and the SAE International. He may be contacted at HYPERLINK "http://www.designgenerator.com" www.designgenerator.com.
