Title: “Electric Vehicle Power Transfer System Using a Mechanized Coupler”

Dear Mr. Pokrzywa:

In accord with the current version of the SAE Technical Standards Board Governance Policy relating to patent disclosures, ABB provides the following assurances:

ABB is not aware of any held invention claimed in a U.S. patent or a pending U.S. patent application the use of which would be required for compliance with SAE Standard / Technical Report No. SAE J-3105. Should ABB become aware of any such invention, ABB may provide a non-exclusive license to the patents/patent applications required for compliance with SAE Standard/Technical Report No. SAE J-3105 under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to make, use and sell implementations of the above document. Such a license will include a Reciprocal Licensing requirement.

Reciprocal licensing means that ABB shall condition its granting of a license for any related patents/pending applications it becomes aware of based upon the prospective licensee’s agreement to grant a license to ABB with reasonable rates and other reasonable licensing terms and conditions to the prospective licensee’s essential patent claims, if any, for SAE Standard/Technical Report No. SAE J-3105.
